But even an item like a tank engine could be a quite different matter. In the 1973 war Egypt captured an Israeli T-54 tank of Soviet manufacture. Previously captured by Israel from Syria, it had been refitted with a General Motors engine.

Egypt raised a question of getting General Motors' engines for about 800 of its Soviet tanks and was told no. Egyptian armor has always figured centrally in past Egyptian offensives against Israel.

An additional factor the Carter administration will have to weigh as it looks at the question of arms to Egypt is the extent to which some additional weapons, as an example of U.S. "even-handedness," might encourage Sadat to take an active but moderate role in seeking a comprehensive peace settlement in the Middle East.

Sadat may well have been sending a signal to the President-elect recently when he said he is interested in a full peace treaty with Israel, not just a non-belligerency agreement.

Mr. Beecher, a member of the Washington bureau of the Boston Globe, is a former deputy defense secretary for public affairs.

Energy Policy Needed

Carter and Oil Prices

By Anthony Lewis

WASHINGTON.—Two months before he becomes President, Jimmy Carter is being importuned to play a quasi-official role on this issue and that. The British want him in on plans for support of the pound. The State Department would like him to send a tough private message to the Organization of Petroleum Exporting Countries warning against an oil price increase.

It is natural that people concerned with particular problems should want to involve the man who before long will make the decisions, and it is tempting for him. But Carter has so far wisely resisted temptation. On the critical oil issue he has confined himself to expressing, as a person with "no responsibility in the government," the "hope" that prices will not rise.

Keeping hands off is wise for reasons of both politics and policy, as the oil case shows. If Carter began working with the State Department now, he would be in a situation that he could not control. If the intervention with OPEC were ineffectual, as the odds indicate, his political image—and potential for influence in the world—would have been damaged.

1932-33 Crisis

Franklin Roosevelt was pressed to act under even more urgent circumstances, the economic crisis of 1932-33. Arthur Schlesinger tells the story well in "The Age of Roosevelt." President Hoover asked the president-elect to the White House to discuss joint action, then wrote him a long letter urging it, finally telephoned him twice the night before the inauguration. Roosevelt resolutely refused to become involved.

Roosevelt and his aides perceived a danger beyond that of taking political responsibility without power. Agreement with Hoover could have been achieved only by accepting many of his premises—and thus tying the new administration to failed policies.

That danger is acute in the oil price situation now. If Carter took part in a diplomatic demarche, he would effectively be adopting as his own a policy that has been one of the certified disasters of the Nixon and Ford administrations.

Henry Kissinger has approached oil prices as a problem in international relations to be handled by his usual methods of diplomatic leverage. For example, he has encouraged Iran to become an enormous buyer of U.S. arms, apparently hoping that the close relationship would among other things make Iran reasonable on oil prices. But the Shah, hungry for more money to finance his ambitions, has led the fight within OPEC for higher prices.

Anyone who wants to know why oil prices are likely to rise should look at the record not of U.S. diplomacy but of U.S. oil imports. Four years ago the United States was importing 29 per cent of its oil; now the figure is 41 per cent. In the same period OPEC's share of the U.S. market has nearly doubled, from 18 to 34 per cent. The simplest notion of market economics would encourage a supplier to raise prices under such circumstances.

The United States, as by far the largest consumer of oil, is more likely to affect world prices by its behavior at home than in its representations abroad. Of course international relationships are relevant, especially the long problem of North-South relations. But last-minute diplomatic dramas in the Kissinger style can never be a substitute for an integrated U.S. policy on the questions of economics and resources involved: that is, an energy policy.

At the time of the Arab embargo four years ago, there was a lot of official talk about energy policy. Richard Nixon emphasized quick development of new domestic oil sources and said his Project Independence would make us self-reliant in energy by 1980. William E. Simon said Americans would have to give up the "wasteful ways" with energy and "go through a permanent change in lifestyle." But it was most just talk.

By now we know that domestic sources can never supply the volumes of oil we are used to consuming. And on energy conservation the U.S. record has been feeble.

The Laggard

The United States should be the West's leader on energy policy, but it is the laggard. Western Europe and Japan have been cutting the amount of energy used per unit of gross national product—Britain by 8 per cent in two years, for example—but there has been no reduction here. The United States has not yet put a single barrel of oil in emergency reserves.

The single greatest encouragement to continued high oil consumption here has been the artificially low price of U.S. gasoline. In constant dollars, discounting inflation, it actually costs a little less in the United States now than it did in the 1950s. The price is half what it is in Western Europe.

The problems are hard. Some U.S. administration will have had to face them some day, whether OPEC existed or not. Industry and outside estimates on the time until the world's oil runs out range from 35 to 75 years. The sooner we get serious about the fact that the supply is limited, the less traumatic will be the inevitable transition to other fuels and other social arrangements.

Privacy for the President-Elect?

By David S. Broder

WASHINGTON.—Well, the White House press corps's Southern army went to church Sunday with Jimmy Carter and gave us his account of the debate over the attempted ouster of the Rev. Bruce Edwards by the deacons of Plains Baptist Church.

If anyone in that chilled and rain-soaked crowd of reporters raised the question whether the massive coverage of this story suggested anything about the press's recognition of the distinction between church and state, it escaped attention.

It was just assumed, apparently, that what Jimmy Carter did in his place of worship was grist for the mill to those assigned to cover his activities as President-elect.

Let me say quickly that in this case, I think the intrusion of the press into the normally private area of a public official's religious life was justified by the exceptional circumstances.

Conflict

Carter himself had made much of both his religious faith and his commitment to the fight against segregation. The dramatic conflict between the deacons and the pastor had already moved beyond the doors of the church and into the public domain.

And for a nation rightly eager for clues on how its new President would react when his attachment to his church collided with a principle he had eloquently stated, the test was certainly one that deserved—indeed required—coverage.

But I still wish there had been a shred of acknowledgment that this was an exceptional instance, for there were other things that indicated no awareness at all by the press of the distinction between the public and private lives of the Carters.

There were lengthy feature stories about the drinking habits of Carter's brother Billy. There were stories speculating about the school nine-year-old Amy will attend in Washington, and the church the Carters will join when they come to the capital. There were yards of copy on the new "in people" and "out people" of the Carters' Washington society.

There's nothing new about this sort of effort to explore every aspect of the life of what we are pleased to call "the First Family." But this sort of treatment still sits uncomfortably with the notion—also widely expressed in the press—that we ought to curb "the imperial presidency" and treat the occupant of that office as just another politician with a job to do.

When Jerry Ford became President, the suggestion was made in this space that the press offer a deal to the new President, swapping more coverage of his public role for increased privacy in the Fords' personal lives.

That trade was never achieved. Ford did grant vastly increased access to the official White House—including far more frequent press conferences—as part of his own effort to change the atmosphere from the neurotic secrecy of the Johnson and Nixon years.

But there were no reciprocal favors from the press. Instead, Betty Ford was pressed to share with the U.S. television public her reaction to a theoretical affair by her daughter, and the dating habits of the Ford young people became a matter of great press attention, just as did the President's ski technique on vacations at Vail.

None of this particularly hurt the Fords. Betty Ford became an enormously popular figure, cherished for her candor as much as for her courage in overcoming her serious illness. The President's family became such a political asset, in fact, that family members were heavily featured in his campaign advertising.

Carter has already made clear that his presidency, even more than Ford's, will likely be a family affair. His wife and sons and cousins and aunts and endless numbers campaigned for him, and his own speeches relied heavily on family anecdotes establishing the "intimacy" he said he sought with his audience.

Nonetheless, futile as it may be, there is an impulse here to try once more a plea that some aspects of the Carters' lives might best be left unreported.

It is going to be difficult—but it mildly to shepherd a bright, precocious daughter through her teenage years in the atmosphere of the White House. Amy Carter's happiness is of greater concern to Carter's constituents than that of any other nine-year-old in the land. But she is of prime importance to the Carters, and a degree of privacy for her and her friends is not an unreasonable request.

And as for beer-drinking Billy and his pals at the gas station, well, they can probably take care of themselves.

But for every feature story Billy, the newspaper or network responsible should be required to run a full-scale analysis of senator Hayakawa's budgeting and the report of Carter's task force on governmental reorganization.

That would break them of the habit.

STILL COMING—Japanese cars waiting to be shipped abroad from Nagoya port, central Japan. The EEC warned Tokyo this week that Europe will curb Japanese exports of cars and other goods unless Tokyo corrects the trade imbalance.

ESTEL Moves Out of Deficit

BASF Profit Up 100% in 1st 9 Months

FRANKFURT, Nov. 18 (AP-DJ).—BASF AG world group continued its earnings recovery in the third quarter and posted pre-tax earnings for the first nine months of 1.07 billion marks, up 100.2 per cent from the 536 million marks posted for the like 1975 period, the company said today.

Management board chairman Matthias Seefelder cautioned, however, that sales, which grew 18.7 per cent to 15.6 billion marks in the first three quarters, were being swelled by an upswing in domestic demand while export sales lagged behind 1974 levels. He also said that the fourth-quarter jump in earnings would not be so strong because the basis of comparism already reflected a partial recovery from the 1975 recession.

In the third quarter, pre-tax earnings more than tripled to 364 million marks from 118 million marks in the like 1975 quarter. For all of 1975, BASF group had pre-tax earnings of 849 million marks on sales of 18.08 billion marks, producing a net profit of 375 million marks.

ESTEL Has Profit

In Dortmund, the Dutch-German ESTEL NV Hoesch-Hoogovens steel group reported a consolidated third quarter net profit of 14 million Dutch guilders against a year-earlier loss of 87.3 million guilders, but the group said the outlook for the final quarter is unfavorable.

The third quarter profit was the company's first positive result since the first quarter of 1975. In the latest reporting period, external sales gained to 2.4 billion guilders from a year-earlier 1.9 billion.

For the first nine months of 1976, the concern had a net loss of 94.2 million guilders, narrowed from a deficit of 109.8 million a year earlier. Sales totaled 6.9 billion guilders, up from 6.4 billion.

ESTEL said that since the summer, order inflow for some important steel and fabricated products has been declining. This development, plus continuing slow business in the group's trading subsidiaries, renders the prospects for the remainder of the year unfavorable, it said.

Kubota Net Up

TOKYO, Nov. 18 (AP-DJ).—Kubota Ltd. said today its net profit in the first half of fiscal 1976 ended Oct. 15 rose 9.2 per cent to 10.97 billion yen ($37 million) compared with 10.05 billion yen in the year-earlier period.

Sales in the first half rose 14 per cent to 222.9 billion yen, compared with 195.5 billion yen in 1975.

The company, a manufacturer of cast iron pipes, agricultural and industrial machinery and household materials, said its profit for the year ending April 15 will rise to about 32.5 billion yen from 20.9 billion yen in fiscal 1975.

Beecham Posts Gain

LONDON, Nov. 18 (AP-DJ).—Beecham Group Ltd. today reported net profit rose to £29.9 million in the first half from £19.2 million in the same period last year.

Sales totaled £331.2 million, up from £251.9 million. The company set an interim dividend of 2.87 pence, up from 2.61 pence.

lent-French Trade Deficit Widens, ts 15 Billion Francs in 1976

RIS, Nov. 18 (AP-DJ).— recorded its largest month- ssonally adjusted trade defi- many years last October, Ministry figures released reveal.

4.712-billion-franc ($942 deficit widened from one billion francs in Septem- of 1.575 billion francs in last year.

October deficit brought trade deficit for the months of this year to billion francs, and com- pares with a surplus of 6.907 billion francs recorded in the like 1975 period.

Seasonally adjusted exports last October totaled 23.265 billion francs, down from 23.860 billion in September but up from 18.162 billion in October, 1975. Imports amounted to 27.977 billion francs, up from 27.214 billion in September and 19.737 billion a year ago.

France's trade position improved on an unadjusted basis, however, with a deficit of 2.554 billion francs, down from a deficit of 4.088 billion in September. Last October France recorded a surplus of 71 million francs.

Unadjusted imports rose to 27.313 billion francs in October from 26.156 billion in September and 18.483 billion in October, 1975. Exports increased to 24.659 billion francs from 22.068 billion a month earlier and 18.554 billion a year ago.

The accumulated deficit over the first 10 months of this year totaled 15.132 billion francs, against a surplus of 6.525 billion over the year-ago period.

Trade Minister André Rossi, commenting on the figures, said the large deficit was largely due to the continued effects of the recent serious drought, and especially to the fact that France had not yet fully absorbed the massive increase in the price of oil.

He pointed out that France's oil import bill amounted to about 50 billion francs during the first 10 months of this year, compared with about 14 billion in 1973—before the oil price increase.

Industrial Output Up

Meanwhile, the Finance Ministry said the industrial production index, seasonally adjusted and excluding the building industry, increased 3 per cent to 128 in September from a revised figure of 124 in July-August.

Based on 100 equalling 1970, the September index compares with 111 a year ago.

EEC to Raise $500 Million at 0.75% Premium

By William F. Low

AMSTERDAM, Nov. 18 (IHT).—The European Economic Community will shortly raise $500 million by way of a syndicated Eurocurrency bank loan. Earlier this year, the EEC borrowed a total of $1.3 billion in both the syndicated and international bond markets.

Informed sources indicate the five-year credit will pay a premium above the London Eurodollar Interbank rate of just 0.75 per cent. This is the first time since 1974 that the 1-per-cent barrier has been broken. In the first quarter of this year, the EEC paid 1 per cent to borrow $300 million over five years.

Bankers explain that the smaller margin reflects the high liquidity in the Eurocurrency markets. Major international banks, faced with stagnant domestic demand, are aggressively lending to foreign borrowers at declining margins.

Despite the low spread the loan should encounter little resistance. Apart from the opportunity to lend to a prime name, banks are expected to participate for political reasons. Managers of the loan claim the sources will include European Banking Co. and Orion Bank.

Now that the 1-per-cent barrier has been broken, other first-class risks are sure to demand lower margins. France, for example, is favored to obtain a spread of under 1 per cent when it next taps the market. At the same time, lesser rated borrowers will pressure banks to adjust rates downward to maintain the interest differential.

It is expected the EEC will lend the funds to one of its economically weak members who include Britain, Italy, Ireland and Denmark. Although unable to provide firm confirmation, the sources speculate Britain will receive the major share—if not all—of the funds.

IMF Changes Gold Auction

WASHINGTON, Nov. 18 (AP).—The International Monetary Fund announced yesterday it will return to the common price method at its fifth gold auction on Dec. 8.

As in the four earlier auctions, the IMF plans to sell 780,000 ounces of its official gold reserves. Profits from the auction will be used to benefit poor nations of the world.

The common price method means that all successful bidders will pay the same price for the gold. In the past two auctions, the agency sold the gold at the amount bid by each successful bidder.

The common price method was used in the first two auctions.

Another change in the fifth auction is that the gold will be delivered to successful bidders at the Bank of England in London, instead of the U.S. Federal Reserve Bank in New York.

IMF sources say proposals to hold the gold auctions weekly, rather than on a six-week basis, have not yet been acted on.

Production Decline Seen

JOHANNESBURG, Nov. 18 (AP).—Gold production in South Africa, which produces 70 per cent of the world's supply, is "on the last plateau before the long decline," it was predicted here yesterday.

D. A. Etheredge, head of the gold mining division of the giant Anglo American Corp., told a management conference in Johannesburg that it is estimated that gold production will be between 700 and 800 tons, nearer to 800, for the next decade.

He added: "Nevertheless, other than a spectacular rise in the gold price or discovery of an entirely new gold field, which we must consider remote, our production will fall quite rapidly after 1986.

"At the turn of this century it is likely to be only half of what it is now."

Mr. Etheredge said other metals would play an increasingly important part in the South African mining industry as the role of gold diminished.

He listed uranium as the most important and said it is no longer a by-product of gold mining but a coproduct. South African uranium production could reach 8,000 tons annually by the next decade, most of which could be exported.

Mr. Etheredge said that "long-term contracts have already been secured for much of the production for more than five years ahead."

Japan Forecasts Rise In Capital Spending

TOKYO, Nov. 18 (Reuters).—Capital spending for plant and equipment by 13 Japanese industries in fiscal 1976 will rise a nominal 15.7 per cent from fiscal 1975 to 7,025 trillion yen, the Ministry of International Trade and Industry said today.

A survey, made by the ministry in September and covering over 1,800 companies, showed spending in real terms will rise 10.2 per cent from the preceding year.

Burns Rejects Tax Cut 'at Present Time'

View Stated as New Reports Say Economy Weakens Further

By Robert Siner

WASHINGTON, Nov. 18 (IHT).—Federal Reserve Board chairman Arthur Burns said today that he saw "no advantage in a tax cut at the present time" but added that he might reconsider his position if the economy maintains its current poor performance.

The Federal Reserve Board chairman, in a speech given before the League of Savings Associations in New York, argued that "in the present environment of deeply ingrained inflationary expectations," the use of a tax cut to stimulate economic growth is much less dependable than it was in the past.

He warned that "the risk is greater now that fears of inflation will intensify and substantially weaken the intended effects" of any tax cut on the economy.

Yesterday it was reported that Mr. Burns had let it be known that he does not necessarily oppose a tax cut and would even be willing to support one to improve the economy's performance and reduce unemployment—provided that it was the kind of tax cut that Mr. Burns thought would do the job. He reportedly had in mind a broad-based, long-lasting reduction.

In his speech today he said that inflation was still the primary economic problem facing the United States and also expressed optimism that the economy could resume its growth without a need for a tax cut.

However, while he warned against measures that would "set off new inflationary forces," the Fed chairman did emphasize that "my mind on the subject is by no means closed."

"Later on," he added, "I will weigh the issue carefully if both economic conditions or expenditure economies seem to warrant a tax reduction."

Mr. Burns's remarks came against a background of new reports on further weakening of the economy. The Commerce Department reported a downward revision of its previous estimate of growth in the gross national product during the third quarter to a level below that considered necessary to begin reducing the nation's 7.9-per-cent unemployment rate.

3.8% Growth

The department said that due to an unexpectedly poor performance in the area of foreign trade, its estimate of a 4-per-cent annual growth rate for the U.S. economy had to be revised to 3.8 per cent during the July-September period.

Reflecting the slowdown in economic growth were Commerce Department reports that the corporate profits rose at a slower pace and personal disposable income actually declined in the third quarter.

The report said that corporate profits increased at an annual rate of $2.1 billion in the July-September period compared with a $3-billion increase rate in the previous quarter.

Disposable income after adjustment for inflation declined on a per capita basis for the first time in a year to $4,142, down $1 from the previous quarter.

Inflation Rate

Commerce Department officials also said that the estimated inflation rate for the third quarter was revised down from 4.4 per cent annually to 4.2 per cent.

President Ford will send to Congress in January his proposal to cut taxes across the board by about $10 billion, coupled with a $2-billion rise in the social security tax rate.

President-elect Jimmy Carter has said he would seriously consider a $13-billion tax cut mainly for low and middle income wage earners next year if the economic slowdown continues.

Some of Mr. Carter's economic advisers have said that they would prefer a one-shot tax rebate rather than an across-the-board permanent tax cut.

Mr. Burns strongly disagreed with the Carter proposals, favoring instead a permanent cut in both personal and business taxes.

"Such a measure, on a responsible scale, would minimize social conflict and have the best chance of producing lasting economic benefits for our country," he said.

Mr. Burns added that the Fed can best contribute toward renewed economic growth by continuing its "course of moderation in monetary policy."

In Plains, Ga., Mr. Carter's press secretary said the President-elect had no immediate comment on Mr. Burns's remarks. Mr. Carter and the Fed chairman are scheduled to meet in Washington on Monday to discuss their attitudes toward the economy.

Some Carter advisers have expressed the fear that the Reserve Board could negate the benefits of any tax cut by tightening the money supply, but Mr. Burns has said he wanted to head off any conflict with Mr. Carter on the matter. He also has pledged to cooperate with the Carter administration for the rest of his term, which expires in January, 1978.

New York Prices and Volume Increase on Economic Hopes

NEW YORK, Nov. 18 (IHT).—Bullish news on the economy set the stage for another broad advance on the New York Stock Exchange today as prices closed sharply higher in heavy trading.

Analysts said aiding the market's rally was the less than expected downward revision of the third-quarter growth of U.S. gross national product.

The analysts also said the market received strong support from remarks by Federal Reserve Board chairman Arthur Burns before a banking group.

One analyst also said a statement by Venezuelan President Perez in Rome that his country will play a moderating role at the forthcoming OPEC oil price-fixing conference was constructive.

The Dow Jones industrial average finished the day up 12.05 at 950.13.

Volume totaled 24 million shares compared with 19.9 million shares yesterday. About 1,200 issues advanced, compared with 350 shares finishing lower.

Finally, the United Auto Workers union announced it will not call a nationwide strike against General Motors if a pact is not reached. GM's stock closed at 71 1/8, up 1 7/8.

Occidental Petroleum, the most actively traded issue on the Big Board, rose 1 1/8 to 19 3/4. The Venezuela government said yesterday it will make arrangements to pay the firm $25 million in compensation for nationalized assets.

Perkin-Elmer rose 1 3/8 to 21 5/8. The company increased its dividend. Leeds-Northrup gained 1 3/8 to 25 1/4 and Denny's 1 1/8 to 22 1/2. Emhart was up 2 1/4 at 33 after raising its dividend and May Department Stores, which had higher third-quarter earnings, advanced 7/8 to 34 7/8. IBM was up 3 1/2 at 270 3/4.

Teleprompter rose 1/2 at 8 1/2. The company expects higher 1977 revenues and earnings. Union Pacific rose 1/8 to 96 following announcement of a two-for-one stock split and a dividend increase.

Prices on the American Stock Exchange closed higher in active trading. The Amex index rose 1.12 to 99.41.

Soybean and grain traded in fairly narrow ranges on the Chicago Board of Trade and closed mostly uneven.

The November soybean contract expired at midday, 10 cents under the previous close, but other contracts were 2 cents lower to 5 higher. Soybean meal, wheat and corn prices also were mixed but soybean oil gained up to 1/2 cent a pound while oats fell 3 1/2.

The man with exceptional goals needs an exceptional bank.

What makes Trade Development Bank exceptional? To start with, there is our policy of concentrating on things we do unusually well. For example, trade and export financing, foreign exchange and bank notes, money market transactions and precious metals.

Geographically, too, we work mainly in areas where we have something special to offer. This includes the U.S.A. (our U.S. affiliate, Republic National Bank of New York, is now one of America's 60 largest banks). It also includes a number of out-of-the-way countries which, frankly, many other banks lack the first-hand knowledge to tackle properly.

What's more, we keep our back-office systems running abreast of our business. You don't notice this directly, but it shows up in quicker decisions, less red tape, fewer errors.

Serving our clients well has helped us grow uncommonly fast. Today, we're big enough to provide most of the sophisticated facilities of the international banking giants—but lean enough not to keep you waiting for committees to deliberate.

As part of the Trade Development Bank Holding Group ($2.9 billion in assets, $258 million in capital funds employed), we're ready to serve you in most of the world's financial centers.

Key Group offices: Geneva, London, Paris, New York (Republic National Bank of New York). Other offices in Buenos Aires, Caracas, Chiasso, Frankfurt, Luxembourg, Mexico City, Nassau, Rio de Janeiro, São Paulo.

Trade Development Bank

Shown at left, new head offices of Trade Development Bank, Geneva, Swiss subsidiary of the Trade Development Bank Holding Group. TDB is now the sixth largest commercial bank in Switzerland.

The doors to the Middle East and, more particularly, that of Saudi Arabia are at 51, avenue George V, in Paris, opening up a market of 7 thousand million dollars of imports in 1975, and 142 thousand million dollars of investments scheduled over the next five years. As the first Saudi private bank ever established outside Saudi Arabia, we can offer a direct contact with the Arab Business World.

Our shareholders and founders:
Saudi Arab Finance Corporation,
Arab Finance Corporation,
Banque de l'Union Européenne,
Manufacturers Hanover International Finance Corporation.
Our capital: 50,000,000 F.
Tel. 720 86 08.
Telex SAUDIBK 630349 F.
Cable Saudibanque.

Foreign Cars Get 28 Per Cent of French Market

PARIS, Nov. 18 (AP-DJ).—Penetration of the French auto market by foreign manufacturers in September *jumped to* 28.02 per cent from 21.53 per cent in the same month last year, with imports totalling 38,830 units compared with 24,532 industry figures released today reveal.

For the first nine months of this year, the 300,225 imported vehicles accounted for 23.46 per cent of sales on the French market, well up from 210,883, or 20.35 per cent, during the same period last year.

The Fiat group retained its place as the biggest importer, with 54,132 vehicles sold in France over September, 1975. Ford moved into second place from third position in September, 1975, while General Motors moved up to fourth place from being fifth.

Imports of Japanese vehicles continued to increase in the first nine month, accounting for 12.3 per cent of French sales.

Japan Wholesale Prices

TOKYO, Nov. 18 (AP-DJ).—Japanese wholesale prices rose 0.2 per cent in the first 10 days of November from the prior 10-day period in October, the Bank of Japan announced.

Currency Rates

November 18, 1976

By reading across this table of yesterday's closing inter-bank foreign exchange rates, one can find the value of the major currencies in the national currencies of each of the following financial centers. These rates do not take onto account bank service charges.

Sales figures are unofficial.

Unless otherwise noted, rates of dividends in the foregoing table are annual disbursements based on the last quarterly or semi-annual declaration. Special or extra dividends or payments not designated as regular are identified in the following footnotes.

a—Also extra or extras. b—Annual rate plus stock dividend. c—Liquidating dividend. e—Declared or paid in preceding 12 months. i—Declared or paid after stock dividend or split up. j—Paid this year, dividend omitted, deferred or no action taken at last dividend meeting. k—Declared or paid this year, an accumulative issue with dividends in arrears. n—New issue. r—Declared or paid in preceding 12 months plus stock dividend. t—Paid in stock in preceding 12 months, estimated cash value on ex-dividend or ex-distribution date.

x—Ex-dividend or ex-rights. y—Ex-dividend and sales in full. z—Sales in full.

cld—Called. wd—When distributed. wi—When issued. ww—With warrants. xw—Without warrants. xdis—Ex-distribution.

Federal Deposit Insurance Corporation, as Receiver

In the Matter of American Bank & Trust Company

NOTICE Pursuant to Section 626 of the New York Banking Law

WHEREAS, on September 15, 1976, the Superintendent of Banks of the State of New York took possession of the business and property of AMERICAN BANK & TRUST COMPANY, pursuant to Section 606 of the New York Banking Law, and appointed the FEDERAL DEPOSIT INSURANCE CORPORATION as Receiver of the Bank, pursuant to Section 634 of the New York Banking Law, for the purpose of liquidating the affairs of the Bank:

WHEREAS, pursuant to a Purchase and Assumption Agreement dated September 15, 1976, between the FEDERAL DEPOSIT INSURANCE CORPORATION, as Receiver, and Bank Leumi Trust Company of New York, all demand, time and savings deposits as and to the extent shown on the books of AMERICAN BANK & TRUST COMPANY at September 15, 1976, have been assumed by Bank Leumi Trust Company of New York and said assuming bank undertook to pay, perform, fulfill and discharge all such liabilities.

NOTICE is hereby given to all persons who may have claims against AMERICAN BANK & TRUST COMPANY, with its main office at 645 Fifth Avenue, New York, New York, and branch offices in the counties of New York, Kings and Bronx, to present such claims to the FEDERAL DEPOSIT INSURANCE CORPORATION, as Receiver, and make proper proof thereof, by filing a proof of claim, on the required form, with:

Federal Deposit Insurance Corporation,
as Receiver of American Bank & Trust Company
P. O. Box 5032
F.D.R. Station
New York, New York 10022.

Copies of the required form of proof of claim can be obtained upon written request therefor sent to the Federal Deposit Insurance Corporation, as Receiver, at the address specified above or, after November 15, 1976, at the office of the Federal Deposit Insurance Corporation, as Receiver, 430 Park Avenue, New York, New York. All written requests for the form of proof of claim must be received no later than February 28, 1977

All claims must be presented, and proof thereof made, no later than March 31, 1977. No claim presented after such date can be accepted. Failure to timely present a claim and make proof thereof may result in waiver of the claim and forfeiture of the right to assert same.

All persons having claims for priority of payment shall make demand in writing for priority in the proof of their claims. Failure to so demand shall be deemed a waiver and abandonment of any right to such priority of payment.

Dated: October 28, 1976.

FEDERAL DEPOSIT INSURANCE CORPORATION,
as Receiver of AMERICAN BANK & TRUST COMPANY
By: R. H. Hoffman, Liquidator-in-Charge.

Invest in a spread of German Companies

Shares in German companies make an attractive investment prospect just now. The reasons are there for all to see:-

* The economy is on an upward trend.
* There is ample scope for share price increases.
* Conditions are good for increased company earnings.
* A country with a strong currency offers foreign investors excellent opportunities.

through CONCENTRA Mutual Fund

CONCENTRA is a large German mutual fund offering the benefits of a wide spread of investment in shares. Launched in 1956 it invests in leading German companies such as AEG, BASF, Bayer, Hoechst, Daimler-Benz, Karstadt, Kaufhof, Mannesmann, VW, Siemens, Thyssen. Its objectives are income and long-term growth.

Performance
Since its inception in 1956, the Fund has achieved a growth of over 405%. The past decade has seen a gain of 93.4%. Foreign investors have fared even better due to the continuous strength of the DM as is shown by the following examples of 10 year performances:
–US $ Investors: 205.3%
–£ Sterling investors: 379.6%
–FF Investors: 205.8%

The Management.
The Fund is managed by Deutscher Investment-Trust, Frankfurt a.M., which has 20 years of experience and almost 4,000 million DM under management. Depositary bank is Dresdner Bank AG, also of Frankfurt a.M.
CONCENTRA makes a yearly distribution, which in 1976 amounted to DM 1.80 per Unit. The current offering price is DM 21.00 (approx.). The net assets amount to almost DM 1,700 million.

CONCENTRA-Units
Units of the Fund, which come in bearer form, can be purchased and redeemed at any time. They are listed on the stock exchanges of Amsterdam, Dublin, London, Luxembourg and Vienna.

CONCENTRA Charges
Loading 5%. Management 0.125% quarterly. Depositary Bank (additional to usual safe custody fee) 0.01% quarterly.
As a German Mutual Fund, CONCENTRA is subject to the German Investment Institutions Act.

Where to purchase CONCENTRA-Units
Germany: Dresdner Bank AG, Bank für Handel und Industrie AG, Bayerische Hypotheken- und Wechsel-Bank, Westfalenbank AG.
Austria: Österreichische Länderbank–Creditanstalt-Bankverein.
Belgium: Banque Bruxelles Lambert–Société Générale de Banque–Kredietbank–Banque de Commerce–Crédit du Nord Belge–Banque Belge pour l'Industrie–Banque Brugeoise.
France: Banque Nationale de Paris.
Italy: Banca Commerciale Italiana–Banca Nazionale del Lavoro–Credito Italiano–Banco di Roma–Banca Popolare di Novara–Banca Provinciale Lombarda.
Luxembourg: Banque Internationale à Luxembourg.
Netherlands: Algemene Bank Nederland–Bank Mees & Hope–Nederlandsche Middenstandsbank–Pierson, Heldring & Pierson.
Republic of Ireland: Bank of Ireland.
United Kingdom: Barclays Bank Limited–Bank of Ireland

To: Deutscher Investment-Trust, Postfach 2685, D-6000 Frankfurt a.M.1
* Investment Account: I wish to open a CONCENTRA investment account with regular reinvestment of distributions. Please send me the necessary documents.
* Information: Please send me, without obligation, the free literature on CONCENTRA and the investment account.
Please delete whichever is inapplicable

DENNIS THE MENACE

BOOKS

THE MIND FIELD

By Robert E. Ornstein. New York Grossman Publ Viking Press. 143 pp. $7.95.

Reviewed by Richard R. Lingeman

FOR all the vaunted American inventiveness, its major talent has lain in taking over the ideas of Old World craftsmanship and turning them into mass-production items—the spinning-jenny and the automobile being two examples. Americans can take an idea, "engineer" it, break it down into interchangeable parts, die and stamp it, package it and merchandise it with 30-second television spots.

In the last few years Americans seem to have accomplished this with what is loosely known as "the wisdom of the East"—the esoteric, mystical, transcendentalist thought that has a niche in such religions as Hinduism, Buddhism and Islam. Although for many years sincere and lonely pilgrims have shed their Western skins and plunged deeply into these seemingly alien disciplines, the greatest éclat has emanated from the barkers of what Robert Ornstein calls "the spiritual sideshow," who muster subtle public relations skills, or just plain old-fashioned brainwashing, to create a demand for a simplified, homogenized kind of wisdom, complete with charts and diagrams of leveled-off EEGs and testimonies of satisfied users. Others, eschewing the exotic effusions of Eastern lotus-eating, have ing changes on the Freudian dream-books, and come up with change-your-life-in-a-week-end sessions that feature a little applied fascism and sound like Grossinger's ads written by Hermann Hesse. Human potential is the name of these various higher-wisdom games. Whatever the game, whatever the motives of the teachers, the benign ductility of Americans is such that many of them actually benefit, at least for a time. Our psychic stall-owners have bottled whiffs of the oceanic feeling, like resort people bottle sea air, and sold it to a willing public, to be taken twice a day for tension instead of Valium.

Robert Ornstein is a psychologist who teaches at the Langley-Porter Neuropsychiatric Institute of the University of California Medical Center and author of "The Psychology of Consciousness." He is a laboratory psychologist who does experiments on the right hemisphere of the brain, yet he is also a student of the ancient techniques of the Eastern religions, especially Sufism. In "The Mind Field," he attempts to cut through the swales of popularized yardgoods on the market and expose their shortcomings; yet, at the same time, he retains an empathy with their higher origins and sees the good in them. To quote one of his Sufi sages: "Counterfeiters exist only because there is true gold."

Believing that Eastern mysticism has much to offer as an adjunct to the Western scientific, inferential mind, he believes the synthesis can be forged between ancient and modern mysticism—in short, East and West. But "The Mind Field" is mainly a critique of the unreason of the current crop of psychic nostrums in America. These are, he believes, fragmented, reductionist, and physically "flatulent"; considering their source and results, there is good reason. Few tatters of glory have been swaddling the Platonic Forms tottering the world.

Initially, he squares off against psychiatry; with, I think, good results. Granted that Freudian theories have a built-in bias, derived as they were from sexually repressed people in Victorian Vienna, but this criticism has been well ventilated and, unfairly, Mr. Ornstein seems to be tarring traditional psychiatry with the brush of the Freudian analytic schools with the blandishments and excesses of the human potential movement—not to mention the psychic hypochondriacs and neurotics who spend their time talking about themselves. As Mr. Ornstein agrees, talented analysts have helped people in pain; furthermore, because psychiatry of the past has been the boosterism of some of the graduates out schools is not quite fair to Freud's vision, after all, was ultimately a tragic one.

Still, I suspect that Ornstein is something in scoring Freud's Victorian view of religion as illusion (but see Jung). At any rate, Ornstein moves effectively from there through psychology, criticizing, as a scientist, the findings of investigators as either poorly quantified or too limited in design.

Transcendental Meditation's claims he finds wanting to the degree of the physiological benefits derived from the practice, but these can also be obtained by repeating a word. Coca-Cola. But efficient meditation has the same end in view. Castaneda wins considerable praise as a psychic voyageur and consciousness and an effective porter on the re-entry.

In his final chapters Ornstein offers a sampler of techniques including the mind-body exercises, stories or whatever, containing blinding parables, revelation that are supposed to shake the disciple out of the clutches of convention. These are interesting exercises but rather like a college outline reducing "War and Peace" in the Cliff Notes Russian. Not that Mr. Ornstein is writing an inspirational book; rather he works within the framework and scientific skepticism of Western psychology to explore the potentials of inductive, holistic thought, while separating the wheat from the voguish chaff. Seekers who are interested in these questions would do well to find "The Mind Field" in their nearest bookstore.

Richard Lingeman is book reviewer for The New York Times.

BRIDGE — By Alan

On the diagramed deal South's two-heart bid when one club was passed around to him showed a good hand with game prospects—there would be no reason to employ a weak jump overcall in the balancing seat. North accordingly raised to game, and West made a shrewd lead of the heart three. Resisting the inclination to lead the king-ten diamond paid a substantial dividend.

The declarer won the first trick with the trump king and returned a trump. West won with the ace and after considerable thought led a club, knocking out dummy's ace. South could now have succeeded by drawing the missing trump and taking a diamond finesse, but he had no clue to the location of the diamond king.

Instead, the declarer not unreasonably played West for the significant card by taking the ace and leading a diamond toward dummy. He was not pleased when West discarded. East captured the diamond jack. West then continued the suit for South to ruff. The declarer tried ruffing the club ten and would have made his contract against a sleepy defender. But East covered with the queen, dummy to ruff, and the fate was established for the ruffing trick.

In the replay, West made more obvious lead of the diamond and saved himself trouble in making sure of winning the first trick by trumping with the jack. Dummy's trumps and last one were gone, East had no club left to be forced, a ruff-

NHL Maple Leafs Win

ookie Goalie Squelches Canadiens, 1-0

NTO, Nov. 18 (UPI).— Mike Palmateer dueled netminder Ken Dryden ged an impressive win- night as the first goalie the awesome Montreal ns in 192 games.

altender kicked aside 39 the Toronto Maple Leafs Montreal 1-0, for Pal- second straight shutout.

He blanked the Vancouver Canucks, 3-0, Saturday.

It was the first time that the Canadiens had been held scoreless since the Philadelphia Flyers shut them out, 3-0, Nov. 2, 1974 —a period covering 189 regular season and 23 playoff games.

Palmateer now boasts a 2.25 goals-against average and a 6-1-2 record in the nine games he has played with the Leafs since he was called up from the Central Hockey League's Dallas Black Hawks.

But the 22-year-old rookie reminded reporters that he wasn't the only Leaf on the ice against Montreal. "The game was a team effort all the way and when I made a mistake the guys covered for me," he said.

Winger Lanny MacDonald was the only one to get on the scoreboard in this duel of the goalies. His shot from just outside the crease at 8:26 of the opening period hit Dryden's glove, but he couldn't control it and it bounced into the net. Dryden made 29 saves.

Toronto coach Red Kelly said he was very pleased with Palmateer, the Leafs' fifth-round draft choice in the 1973 amateur draft. He acknowledged that the rookie has become a mainstay on the club.

"Mike's confident and doesn't get rattled easily," he said. "He's poised and the whole team played well in front of him. We're up to .500 hockey now and Mike's a big reason for that success."

Rangers 3, Black Hawks 2

At New York, two first-period goals by Phil Esposito helped the Rangers break a club-record seven-game home losing streak with a 3-2 victory over Chicago.

Both of Esposito's goals came against his brother, Chicago goalie Tony Esposito. The first was a shot from the right face-off circle after a pass from Ken Hodge at 5:59 of the first period. Then, at 10:19, Esposito scored his ninth goal of the season on a rising slapshot from the left side.

Hodge and Esposito teamed again after Chicago's first goal in the second period, with Hodge scoring on a breakaway after a feed at the Chicago blue line from Esposito.

Bobby Orr, whose damaged left knee has kept him out since Oct. 27, was with the Black Hawks but did not dress for the game.

Flames 6, Rockies 3

At Atlanta, big rookie Willie Plett scored two goals and assisted on a third to ignite the Flames to a 6-3 victory over Colorado.

Plett teamed on a line with center Tom Lysiak and left wing Eric Vail. The line scored four goals.

Wings 5, Blues 5

At Detroit, Rick Lapointe's first goal of the season for the Red Wings provided a 5-5 tie with St. Louis.

The Detroit defenseman unleashed a 90-foot drive from close to center ice at 12:20 of the final period to beat St. Louis goalie Ed Staniowski cleanly and snap a two-game losing streak for the Red Wings.

Dennis Hextall, Bobby Sheehan and Walt McKechnie put the Wings up 3-0 in the first period before Gary Unger replied with two goals and Floyd Thomas with one in the second for St. Louis. Detroit's Nick Libett added a goal in the second period.

Larry Patey and Claude Larose scored for the Blues within the space of 90 seconds before Lapointe's long scoring blast forged the deadlock.

Sabres 3, Canucks 2

At Vancouver, Don Luce scored with just 13 seconds to go to give Buffalo a comeback 3-2 win over the Canucks in a cleanly-played contest that produced only two penalties.

The Canucks took a 2-1 lead into the third period, but allowed the advantage to slip away in absorbing their 14th loss in 20 games when Terry Martin scored with about 6 1/2 minutes to go and then Luce tallied when Vancouver winger Don Lever gave up the puck at the Canucks' blue line. The Buffalo forward then skated in alone and beat goalie Cesare Maniago.

Vancouver opened the scoring when Dennis Ververgaert counted his ninth goal of the season, but Buffalo tied it on an unassisted marker by Guy Perreault.

Barons 3, North Stars 3

At Bloomington, Minn., it looked like it was going to be one of those nights for Cleveland, but the Barons battled back from a 3-0 deficit to tie Minnesota, 3-3.

The North Stars had opened the scoring at 1:40 of the first period when Cleveland goalie Gilles Meloche batted at a shot by Bill Fairbairn and it bounced off his arm into the net.

The North Stars kept the pressure on, with Roland Eriksson scoring again in the first period and Pierre Jarry getting his eighth goal of the season at 7:05 of the second.

playing only half the d in 16 of his 24 points t half while Carr also 24. That was a pro- gh for Carr.

ons were never in trou- ble after the midway point of the second period.

Bullets 111, Knicks 97

At Landover, Md., Phil Chenier scored 30 points and Leonard Robinson added 27 and a career-high 20 rebounds as Washington romped to a 111-97 victory over the injury-riddled New York Knicks.

Chenier, who hit 14 of 26 shots, scored 12 points in the first quarter as Washington took a 25-20 lead.

New York, which played without the injured Spencer Haywood and Jim McMillian, also lost Bill Bradley in the second period with a strained right shoulder muscle.

Pacers 123, 76ers 117

At Philadelphia, Billy Knight scored 30 points as Indiana defeated the 76ers, 123-117.

Indiana opened a 16-point lead early in the fourth quarter. Philadelphia then began a comeback to cut the Pacers' lead to 112-109 with 2:54 left. The winners then got seven straight points, four by Don Buse, to open a 119-109 margin that clinched their victory. Buse had 19 points for the winners and also handed out 11 assists.

Rockets 120, Braves 114

At Houston, Moses Malone and Rudy Tomjanovich each scored four points in overtime to lead the Rockets to a 120-114 come-behind victory over Buffalo.

Houston, 7-5, trailed by as much as 17 as Buffalo's shooting was torrid and the Rockets' top scorers, Mike Newlin and Tomjanovich, were held to three points between them in the first half.

Rockets rookie guard John Lucas, playing in place of Calvin Murphy, tied the game at 72 with a 12-foot jump shot 7:08 into the third quarter. Lucas's 21 points led all Houston scorers.

Nuggets 112, Nets 78

At Denver, foward Gus Gerard scored a team-high 17 points and teammate David Thompson added 16 for a Nugget 112-78 rout over the cold-shooting New York Nets.

Gerard scored 12 of his points in the first half as the Nuggets got their 10th victory in 11 starts, including seven straight games at home.

Suns 103, Bucks 95

At Phoenix, guards Dick Van Arsdale, Ricky Sobers and Paul Westphal combined for 55 points to lead the Suns to a 103-95 victory over Milwaukee.

Van Arsdale had 19 points and Sobers and Westphal 18 each. They were the only Suns in double figures, but their teammates contributed enough to offset Milwaukee's three-pronged offense of Brian Winters, Gary Brokaw and Bobby Dandridge.

Sonics 92, Cavaliers 78

At Seattle, forward Bruce Seals scored 21 points and captured 10 rebounds and reserve center Mike Green added 15 rebounds to lead the SuperSonics to a 92-78 victory over Cleveland.

Holding Cleveland to 78 points was the best defensive effort in Sonics history. Their previous low was 79 points, against Chicago in December of last year.

VETERAN RECRUIT—Bert Campaneris (left) and Texas manager Frank Lucchesi after purchase of Campaneris, a former Oakland A's player, was announced in Arlington.

As Baseball Free Agents

Rudi, Cash, Campaneris Sign With New Teams

By Murray Chass

NEW YORK, Nov. 18 (NYT). —Three more of baseball's free agents signed with teams yesterday and at least one more stood poised to do the same.

In another hectic day, these were the developments:

• Joe Rudi, former Oakland outfielder, became the second free agent to sign with the suddenly competitive California Angels; Bert Campaneris, another expatriate from Oakland, signed with the Texas Rangers, and Dave Cash, the second baseman who helped Philadelphia win a division title, became a member of the Montreal Expos.

• Barring a last-minute hitch, Gary Matthews was on the verge of joining the Atlanta Braves, whose owner, Ted Turner, was so eager to sign the former San Francisco outfielder that he incurred a fine for tampering.

• Reggie Jackson, who most likely will be the most expensive free agent and perhaps the last of the glamour names to sign, originally sought more than just money. He wanted his new club to invest in land in Arizona and he wanted it to play an annual exhibition game with the proceeds going to the support of a home for old Negro League players in Arizona. However, he couldn't interest anyone in those ideas so he reverted to what everyone else is after—money.

6 Have Signed

The signing of Rudi, Campaneris and Cash—all Jerry Kapstein clients—brought to six the number of the free agents who have signed multiyear contracts from the group of 25 players who departed their old teams for more lucrative homes.

In getting Rudi, the Angels became the first team to sign two free agents. That is the quota that most teams can sign under the rules of the new reserve system, but the Angels lost three players to free agency so they can sign one more.

Whether they will depends on how deep Gene Autry, their owner, and his partners want to dig into their treasury. Although no figures have been disclosed on the signings of Kapstein's clients, it is believed that Rudi and Don Baylor, who signed with California Tuesday, have cost the Angels between $2.5 and $3 million.

"We are in search of a championship ball club in Anaheim," Harry Dalton, general manager of the Angels, said in Providence, R.I., where the three signings were announced yesterday. "I'm just thrilled I see so many bright days ahead for California. If I have a smile on my face, forgive me."

If the Angels sign a third quality free agent, a number of other clubs won't be smiling. The three players the Angels lost were all minor leaguers and one, Tim Nordbrook, was purchased from Baltimore during the season.

Protest Considered

Some owners, feeling California bought Nordbrook just so they could get another free agent, have said they would consider filing a protest with Commissioner Bowie Kuhn if another player joins Rudi and Baylor in Anaheim.

Rudi, who drove in 94 runs last season, will join Bobby Bonds in the Angel outfield, while Baylor could play the outfield or first base, but very likely will serve as California's designated hitter.

The 30-year-old Rudi, one of six stars the A's lost this year, nearly became a member of the Boston Red Sox for $1 million last June, but the commissioner voided the deal. The talented outfielder sat out for three weeks until Charles Finley, the Oakland owner, agreed to play him, Rollie Fingers and Vida Blue under threat of a strike by the other A's players.

Campaneris, one of those players, is 34 years old but is considered a young 34 (he stole 54 bases last season) and will be the starting shortstop in Texas. The Rangers also are said to have a good chance of signing Sal Bando, the A's third baseman, in their quest to rebuild their porous infield.

Cash, at 28 one of the best second basemen in the majors, is a career .290 hitter and will provide Montreal with concrete help in its bid to become competitive with someone besides the other last-place team.

Montreal Eyes Jackson

The Expos also would like to sign Jackson, whom they made the first choice in the negotiations, but the leading contenders for his expensive—perhaps $3 million—services are said to be the Expos, the Phillies, the Braves and the Yankees.

The Yankees, though, have placed Bobby Grich, an infielder, and Don Gullett, a left-handed pitcher, ahead of Jackson on the list of priorities. Their toughest competition for Grich, whom they would use at shortstop, appears to be from the San Diego Padres, who have signed Gene Tenace, and the Boston Red Sox, who have signed Bill Campbell.

Philadelphia and Los Angeles are considered the Yankees' primary competition for Gullett, whom the Cincinnati Reds also are still trying to get back.

World Series Shares

NEW YORK, Nov. 18 (UPI). —The world champion Cincinnati Reds and American League champion New York Yankees will receive individual record checks for their performances in the playoffs and World Series this year.

Baseball Commissioner Bowie Kuhn announced today that each full share for the Reds will amount to $26,366.68—topping the previous high for a winning share of $24,617.57, which went to the Oakland A's in 1973.

Kuhn also said that each losing share for the Yankees will be $19,935.48, compared to the previous high of $15,703.97 received by the Los Angeles Dodgers in 1974.

In World Cup Soccer

France, Italy Appear Likely To Reach Finals in Argentina

PARIS, Nov. 18 (UPI).—Italy gained a big step toward the 1978 World Soccer Cup finals yesterday when it defeated England, 2-0, but, in the four other World Cup matches played in Europe, only France emerged as a clear favorite to reach the last 16 in 1978.

The French downed Ireland, 2-0, to move into the lead in Group V, having already tied Bulgaria 2-2 in Sofia.

The worst setback was suffered by East Germany, the Olympic gold-medalist and unbeaten in 13 matches, which was held 1-1 by Turkey in Dresden in a Group III match. Turkey now heads the group, which includes Austria and Malta.

In Glasgow, Scotland edged Wales, 1-0, through a goal by a Welsh defender but the outcome did not make Group VII any clearer. Czechoslovakia defeated Scotland, 3-0, last month and still heads the standings.

Portugal made heavy work of defeating Denmark, 1-0, in Group I, which is dominated by Poland.

Superb Header

Italy, led by the outstanding play of midfielder Franco Causio, demoralized England with a 37th-minute goal from a free kick scored by Giancarlo Antognoni and then got its second goal from a superb header from Robert Bettega 15 minutes from the end.

The second goal could prove very valuable to the Italians, who play in probably the decisive match in Group II in almost exactly a year against England at Wembley.

If Italy does not lose a point to Finland, or England to Luxembourg, next November's match will be the clincher and England could find it hard to score twice against Italy's defense.

France, which has been steadily rebuilding its team during the last three years, scored two second-half goals from Michel Platini and Dominique Barthenay to defeat Ireland, which had a goal disallowed for offside.

The French, under new manager Michel Hidalgo, are well placed to qualify from the group because Bulgarian soccer is currently weak.

German Goal

East Germany looked set for a victory after getting a morale-boosting 3d-minute goal, scored from the penalty spot by Kotte.

But Cemil equalized for Turkey in the 31st minute and then Turkish goalkeeper Senol thwarted wave after wave of German attacks to force a tie.

Turkey now has a chance of qualifying for the first time if it can defeat East Germany in Ankara in a year's time, and provided Austria does not upset the balance.

Scotland and Wales played a very tough match at Hampden Park, but the Scots only won because Welsh defender Ian Evans put the ball into his own net. It could have been 6-0, but Scotland hit the woodwork three times and Welsh goalkeeper Dai Davies foiled all their other attempts.

Portugal's narrow victory did little to enhance its chances in Group I, Poland has already beaten the Portuguese, who scraped a victory through a 71st-minute goal from Manuel Fernandes.

Big 8 Mess Led Pitt to Sugar Bowl

PITTSBURGH, Nov. 18 (UPI).—Pittsburgh, the No. 1-ranked college football team, has decided to accept an invitation to play in the Sugar Bowl.

The Sugar Bowl decision was reached at a team meeting. A player said that coach John Majors gave the squad a choice of the Orange or Sugar Bowl, but the Panthers decided on the Sugar Bowl because of the confusion surrounding the Big-Eight representative.

The winner of the Big-Eight title goes to the Orange Bowl, but five teams are tied for the crown. The conference race could end in a three-way tie and the final decision on who plays in the post-season classic might be made by the Orange Bowl committee.

Sixth-ranked Georgia has already clinched a berth in the Sugar Bowl as the Southeastern Conference champion.

Although Pitt has reached its decision, the official invitation cannot, by NCAA rules, be made until Saturday.

Gained 1,000 Yards for NFL Bears

Chicago Runner Justifies Views of Scouts

By William N. Wallace

NEW YORK, Nov. 18 (NYT). —It is just a figure, 1,000 yards, but in pro football it has not only significance but also prestige and exclusivity. Walter Payton, the Chicago Bears' running back, joined the 1,000-yard club last Sunday more or less on schedule and thus justified the views of all the scouts who, when they saw him in college at Jackson State, nodded sagely to one another and said collectively, "Can't miss."

Payton has gained 1,008 yards rushing this season and leads the league as the only runner over 1,000. With four games to go, Payton could wind up with around 1,500 yards, which would put him in a class with O. J. Simpson and Jim Brown.

He is only in his second pro season and 22 years old. His coach, Jack Pardee, says: "Walter Payton hasn't even scratched the surface yet. He has skills we haven't tried to take advantage of. He's already great but he's going to get better because he wants to work."

The Bears' offense is quite simple because it is a young team and the quarterback, Bob Avellini, is also in his second pro season. If Avellini progresses, then so will Payton in making use of his skills because he will become more of a pass-receiving threat, like Terry Metcalf of St. Louis. The Bears just barely know how to pass at this point.

Lot to Learn

Pardee has another explanation. "Right now he hasn't perfected his running game," the coach said. "He's still learning to be a runner. That's why we're not passing to him. He has a lot to learn about beating linebackers and the secondary on passing situations.

"With his ability, you have to give him the ball. The ideal situation would be to have him run 25 plays a game and pass to him 10 times."

Payton was the fourth player selected, and the first running back, in the 1975 draft after Steve Bartkowski, Randy White and Ken Huff. He did everything possible with the football at Jackson State—run, pass, catch, kick, return kicks and score (66 touchdowns).

He has been compared with Lydell Mitchell, Chuck Foreman and Metcalf among contemporary runners and to Gale Sayers among those of the past. Payton dislikes any comparisons and disdains them, especially when related to Sayers, the last Chicago running back of any dimension.

"It isn't fair to me or Sayers to make comparisons," Payton has said. "I like to think my running style is unique."

Sayers's style was even more rare. He was lighter and faster, although Payton is no slowpoke. Also the fluid Sayers could change direction—in the trade he was a cutter—like no one past or present and preferred lots of space to run in. Payton needs less space but goes down protesting all the way.

Inanimate Sense

By Russell Baker

NEW YORK—The decent thing for an inanimate object to do in America is wear out. Most inanimate objects understand this and do their duty. Light bulbs are particularly good about it. I have seen brand-new light bulbs wear out five minutes after arriving home from the store.

Baker

This used to infuriate me, particularly when it happened on the same day my car or refrigerator had just worn out. I would jump up and down on the worn-out bulb. This seemed less foolish than jumping up and down on the car or the refrigerator. Afterward, I would go back to the store and buy another light bulb.

These objects may have been inanimate, but they had a sense of responsibility to their race. Even ponderous pachydermic objects—like the automobile and refrigerator—were willing to wear out after a mere two or three years so that succeeding generations of automobiles and refrigerators could have their chances to browse in my bank account. The tiny light bulb's willingness to sacrifice itself almost immediately for its fellow light bulbs was a thing to be admired, rather than cursed. As I matured and outgrew childishness, I began to praise the light bulb's delicate sensibility.

In time, I perceived that the wearing out of inanimate objects that was going on all around me was not the curse to my wealth which I had once thought it to be. but an economic boon to America, and, therefore, to me.

And so we smiled as we heard the car wearing out and the iron wearing out and the electric hair-dryer and electric carving knife wearing out prodigiously, of course. but we had a rare treat at bedtime one night when we discovered the electric alarm clock had worn out. The stove wore out that same week. The electric skillet wore out the week *afterward. Radios wore out.* So did pipes, sinks . . .

We were sitting right smack in the middle of an economic miracle, yet I was alarmed. And with good reason.

The television set wasn't wearing out.

What's worse, the toaster wasn't wearing out.

The toaster was a truly sinister case. We acquired it in 1950 and it was still making toast as well as it *had made toast 26 years* ago. After discreet inquiries, I learned that the average toaster lasts only three months before wearing out. If three months was the normal toaster's life span, my toaster was 104 years old. It seemed indecent for a toaster to hang on so long. No wonder the economy had been depressed for the past several years.

The television set's refusal to wear out was doubly unnerving. Everybody hears now and then of one appliance that refuses to wear out; to have two in a single household seemed too unlikely to be dismissed as pure coincidence. Could diabolism have invaded our objects?

The television set's refusal to go quietly into that good night also created tensions within the family. The set predated color television. We had always assumed we would move up to color like everybody else the day the set wore out, but its persistent grip on life had begun to make some of us think the rest of America would move up to feelevision before our house had moved up to color.

The house divided into factions. A minority became obsessed with preserving the old black-and-white set, thinking it might become a "classic" in a few more years. The majority began to fear and despise the thing for not wearing out. They would in*sult it*, accuse it of lacking the good taste to wear out properly and twist its rabbit ears until they broke. The thing remained undiscouraged.

There was no doubt that we would have been under dark suspicion if the economists had caught us with not only a black-and-white TV set, but also a 26-year old toaster. For safety, we put both objects in a closet and used huge sums of money to re*place them with machines* that are already wearing out really splendidly. And onward we march to glory.

'(The program) is important and profound. People are waiting to talk about how they feel. This is real life, not simply a radio show.'

The French Get a Chance to Be Heard

By Susan Heller Anderson

PARIS, Nov. 18 (IHT).—Between midnight and 1 o'clock this morning, nearly one million listeners of "Open Line," France's U.S.-style telephone talk show, heard the heartaches and revelations *of: a* guilt-ridden, devoutly Catholic homosexual (male), a maritally insecure unemployed marketing expert (female), a do-good Red Cross volunteer ambulance driver (female) and a disgruntled Tunisian hairdresser (female).

It was a rather slow night.

Yet, since the program began on Europe 1 in September, 1975, callers have included a murderer on the lam for 18 months and still in hiding, would-be suicides, the predictable number of junkies and drunks, and hundreds of lonely single persons whose sole contact with humanity seems to be vicariously through Gonzague Saint Bris, the show's host.

"In France, people are represented only as part of groups," Gonzague, as he prefers to be called, observes. "We are giving individuals a chance to be heard." Among his biggest group of fans are convicts. "Everyone has a voice on this show. I believe in the dignity of the individual. It's not my thing to judge people."

"Open Line" has been an unexpected success. More than 100 letters a week, from Belgium, Switzerland, Algeria, Morocco, Italy, England and the Netherlands, as well as France, pour into the tiny, dreary office Gonzague shares with his assistant.

The letters are uniformly adoring. Most address Gonzague with the familiar "tu". A 34-year-old girl, bedridden for six months with a broken spine, writes, "Your program has helped me to appreciate the real value of life." From Madrid, "You illuminate the night like the brightest of stars." "You have extraordinary human warmth," says a Bordeaux woman. "You are the Marcel Proust of the night," another says.

Gonzague Saint Bris.

The object of this affection was born in Loches in the Touraine, 27 years ago. Father is a diplomat. Mother is, in Gonzague's opinion, a rather good poet. The family's country manse is in Amboise, the Manoir du Clos Lucé, where Leonardo da Vinci died and where Gonzague was raised.

Plunging into journalism at 18, he rose quickly from the pages of a provincial newspaper to those of the large Paris daily Le Figaro in 1970.

He left as spectacularly as he arrived after taking his dog, Kitch, to an official reception for the staid Académie Française. "During a speech by Etienne Wolf, my dog did peepee on an academician's foot and that was it."

He also sailed over Mont Blanc *in a hot-air balloon* and cycled around the cupola of the Opéra, the latter stunt to publicize his film on the Palais Garnier. He writes a weekly column for "Elle", called "Whispers", and makes an occasional appearance in the Figaro.

Two years ago, he set Paris abuzz with his first book, "Who Is a Snob?" Flinging his floor-length fur over a chair, he insists, "If I were a snob, I couldn't do this show." A Cartier watch limply encircles his slim wrist.

Refined

His good breeding shows on the program. He never in*terrupts, cuts* people *off* or is visibly patronizing. "It would be too brutal." He tries to set the tone of the language. "We do get all sorts of calls, but none are gross. One man talked about a group sex experience but he used very refined language."

Gonzague himself expresses amazement at the variety of callers. "One man taped his kid being born. Another was a stationmaster, and we listened when a train arrived. A telex operator put the phone near his machine."

He is fascinated by sounds as well as by people and loves to eavesdrop on conversations. "For a writer, it's essential to listen. The voice is simply a mask."

In the hermetic hush of a dimly lighted studio, Gonzague uncoils his elegant legs and waits languidly for the first call. Long, very white fingers drum restlessly. The concept of a program dependent on the telephone is, in France, courageous, and there are many callers who are cut off, lines that don't work and mysterious bugs.

Finally, the Catholic homosexual comes on and recounts his youth. Gonzague listens attentively, swilling Coke.

Advice

Next the unemployed marketing expert explains she fears losing her husband because she has lost her job. Deliberately unopinionated and apolitical on the air, Gonzague does, occasionally, dole out soupçons of advice. He suggests that this caller re-evalute her ideas on marriage, that they are confused with material success.

He is not depressed by the endless woes of his listeners. "I wish life were as gay as this program." He gets plenty of his own ups from people calling to say how wonderful the show is, and to gush over his first novel, "Athanase ou La Manière Bleue," released just two months ago with 25,000 copies already sold.

Despite his slick social exterior, Gonzague is passionately involved with the program. "It is important and profound. People are waiting to talk about how they feel. This is real life, not simply a radio show.

"Sometimes we get 80 calls in an evening. This is a human success."

PEOPLE: *Wartime 'Tokyo Rose' Keeps Trying for Pard*

"Age is creeping up on me and I'd like to finally get it all over with," declared 59-year-old Iva Toguri d'Aquino Wednesday outside San Francisco's old federal *courthouse* where she was convicted 27 years ago of treason as "Tokyo Rose". She has mailed a petition to the U.S. Justice Department asking for a pardon that would restore her U.S. citizenship. "I'd like my citizenship restored so the possibility of deportation can never be brought up again." She was convicted in 1949 of *broadcasting* anti-American propaganda from Japan to GIs during World War II. She served six and a half years of a 10-year sentence, successfully resisting government efforts to deport her when she was released from prison.

Iva Toguri d'Aqu

Eldridge Cleaver, the former Black Panther who a year ago returned to the United States to face trial on an attempted-murder charge, is on his way to Europe. Cleaver ended his seven-year exile from the United States voluntarily. He is currently free on $100,000 bail while awaiting trial, set for Jan. 24. A family spokesman said in San Francisco that *Cleaver would spend* "about 10 days to two weeks meeting with publishers in Paris and Germany who have the European rights to his book. California law allows travel abroad for people out on bail unless a judge specifically prohibits it. No such restrictions were attached to Cleaver's bail. Cleaver, now 41, was charged in 1968 with assault and attempted *murder* after he was wounded in a gun battle between the Panthers and police in Oakland, Calif. He jumped a $50,000 bail in November of that year and fled the United States.

* * *

Francis Gary Powers, imprisoned in the Soviet Union after his U-2 spy plane was shot down in 1960, is now a *helicopter* pilot and reporter for KNBC-TV in Los Angeles. The Powers incident led to the breakup of a summit meeting between President Dwight Eisenhower and Soviet leader Nikita Khrushchev. Powers was tried in Moscow and sentenced to 10 years in prison—he was released in 1962.

'I was silent for 30 years and nothing can change that. These people were my friends and I did not have the courage to condemn them.'

Japan 30 Years After —A New Atrocity

By John Saar

TOKYO, Nov. 19 (WP).—What is described as the hitherto secret story of Japanese scientists who killed World War II prisoners in bacteriological warfare experiments has been revealed by a television exposé.

At a high-security camp in Japanese-occupied Manchuria, the scientists killed at least 3,000 Chinese prisoners from 1941 to 1945 by infecting them with plague, cholera, anthrax and typhoid. They were not prosecuted, according to a journalist who has investigated the death unit for three years, and some of those scientists now hold eminent positions in government and leading universities.

Five former members of the unit told television director Haruko Yoshinaga that they were promised complete protection in return for cooperating with U.S. authorities.

"All the important documents were given to the United States," Miss Yoshinaga said yesterday. "They know everything. I don't know what happened between the two governments."

In the television documentary on the germ warfare unit, Miss Yoshinaga revealed secrets closely held in Japan during and since the war. Her completed hourlong exposé, "Television Reportage of Devil Unit 731," was aired recently by the Tokyo Broadcasting System (TBS), the largest commercial network in this country.

Miss Yoshinaga traveled throughout Japan to track down 20 former members of the wartime unit with the code name, "731." Most were appalled to be confronted with their long-hidden past. Miss Yoshinaga said: "They trembled, shook; some were so shocked they couldn't speak. As I stood next to a man who is now a health center official, I could hear his heart pounding."

Four of the men finally agreed to help and the reporter found that their testimony agreed with reports of war crime trials held in the Soviet Union in the 1950s.

A month before Japan's surrender in September, 1945, the unit's workers killed their remaining prisoners, dynamited the buildings in an attempt to conceal their activities and fled to Japan. About 20 lower-level persons were captured by the Russians and served prison terms before being repatriated in 1956.

The unit hurriedly disbanded after a final meeting. The germ researchers were warned to stay out of the major cities and never speak of their work with 731, even to close relatives.

Dr. Sueo Akimoto, 68, says that 731 was "a death factory for a living cemetery." Although his work on blood types was not directly related to the fatal experiments on Chinese political prisoners, he feels criminally associated with them. In an interview yesterday, he said that he and others more deeply involved in the experiments on living humans should be prosecuted.

"I will regret it to my death," he said sorrowfully. "I was silent for 30 years and nothing can change that. These

Shadow Cabinet Shuffled By Tories

LONDON, Nov. 19 (Reuters).—Opposition Conservative leader Margaret Thatcher today reorganized her shadow cabinet, dropping her foreign affairs spokesman, Reginald Maudling, and replacing him with a former industrialist.

The shadow cabinet is generally regarded as the core from which a government would be formed if it won a general election.

Today's changes are viewed as providing a stronger team for an all-out offensive on the Labor government, which has an effective majority of only two in the House of Commons. Two recent by-elections with big swings to her party have strengthened Mrs. Thatcher's resolve to work toward an early general election.

The new foreign affairs spokesman will be John Davies, 60, who was responsible for European affairs in the Conservative government at the time of Britain's entry into the European Economic Community in 1973.

Management Leader

Mr. Davies has also been trade and industry secretary and before entering Parliament he was director-general of the Confederation of British Industry, the country's main management organization.

Mrs. Thatcher still has found no place in her team for former Conservative Prime Minister Edward Heath whom she defeated for the party leadership 20 months ago.

Mr. Heath went into political seclusion after his defeat but was thought to have become reconciled with the mainstream of the party at the annual conference of Conservatives last month. However, he made a recent speech criticising the party's tactics.

Mr. Davies enters the shadow cabinet after a period of criticism of Mr. Maudling's performance. Mr. Maudling was accused of keeping too low a profile in foreign affairs.

Two more new faces in the shadow cabinet are Tom King, 44, to be chief energy spokesman, and Edward Taylor, 39, a former junior Scottish minister, to be chief trade spokesman.

Francis Pym, formerly agriculture spokesman, moves to the job of leading the party on devolution of powers to Scotland and Wales, which will be a major issue in the next session.

Winston Churchill, 36, grandson of Britain's wartime leader, received his first front bench post as deputy defense spokesman, with Ian Gilmour, a former defense minister, remaining in charge of this field.

Meanwhile, Prime Minister James Callaghan's office announced that Britain will nominate a Conservative member of Parliament, Christopher Tugendhat, 39, as a member of the Common Market's Commission.

Beirut crowd greets an MEA jet, the first scheduled flight to land at reopened airport.

Beirut's Airport Reopens After a 5-Month Shutdown

BEIRUT, Nov. 19 (Reuters).—Beirut's international airport, closed by civil war for five months, reopened today under the protection of an Arab League peacekeeping force.

The first plane to land was a Middle East Airlines Boeing 707. By late afternoon, three more airliners had arrived from Saudi Arabia, Switzerland and France. About 120 passengers came and 200 left for Europe and elsewhere in the Middle East.

The airport was closed in June after shelling killed a pilot and damaged the terminal.

Beirut Airport was once the busiest in the Middle East, often handling more than 200 landings and takeoffs a day.

Middle East Airlines, Lebanon's national airline, had been losing more than $1.5 million a month while the airport was closed, according to senior company officials. The company expects full airline services to resume gradually.

Lebanon was reported quiet today under the Syrian-enforced cease-fire.

Strauss' Party Votes to Break Alliance to CDU

By Craig R. Whitney

BONN, Nov. 19 (NYT).—The conservative Bavarian Christian Social Union, led by Franz Josef Strauss, voted today to break away from the Christian Democratic Union and end a 27-year alliance that has shaped postwar West German politics since the days of Konrad Adenauer.

According to an aide in his headquarters in Munich, Mr. Strauss wants to make his party a national force instead of a regional group, and to win enough extra votes to put the conservatives back into power after seven years in opposition. The next national elections are scheduled in 1980.

UPI.

Franz Josef Strauss

Mr. Strauss, who was defense minister and finance minister in Christian Democratic governments in the 1950s and 1960s, led his party as it won 60 per cent of the vote in Bavaria in the Oct. 3 elections here. But nationwide, the opposition parties' candidate, Helmut Kohl, won 48.9 per cent of the vote and was unable to turn Chancellor Helmut Schmidt out of office.

Until now, the two parties have been organized as one in the 496-seat Bundestag (parliament) in Bonn. If they split up, the CSU would have 53 seats and the CDU 191. They would probably continue to vote together on the major issues, but Mr. Kohl would not be the undisputed chief of the parliamentary opposition when the newly elected Bundestag convenes next month.

Surprise for Kohl

The decision today took Mr. Kohl, who was in Mainz, by surprise, according to a close personal aide. "He was cool but we're not going to take this lying down," the assistant said. Mr. Kohl later described the action as "a step in the wrong direction," and began consultations aimed at getting the step reversed.

The revolt took place today in a bastion of regional traditionalism—in the spa town of Kreuth in the foothills of the Bavarian Alps, south of Munich. Most of the party's 53 members of parliament met there and voted, 30 to 18, not to continue their alliance with the CDU.

His aides described it as a blow to Mr. Kohl, who would have a strong position to chip away at Mr. Schmidt's 10-seat majority in the Bundestag if the two conservative parties stayed together.

Mr. Strauss' political position does not differ greatly from Mr. Kohl's, but personally they do not get along. The Bavarian leader has been a particularly outspoken critic of the government's détente policies, calling them "a total failure" and "give-aways." While he has been somewhat more conservative than Mr. Kohl on social policy—criticizing welfare "gratifications"—the main difference between them is one of tactics.

Mr. Strauss believes two conservative parties could win more votes than one. Some of Mr. Kohl's aides fear it would turn out the other way. "It's not at all sure all his own party will go along with this step either," one of them said.

Mr. Strauss said of a nationwide party today, "That decision is out of my hands."

Politically, the Roman Catholic, conservative Bavarians have al-

After Cortes Approves Reform

Suarez Moves to Set Referendum

MADRID, Nov. 19 (UPI).—Premier Adolfo Suarez and his Cabinet today drew up final plans for a national referendum on the establishment of a popularly elected parliament.

The Franco-era Cortes (parliament), a nonrepresentative body, approved the political reform plan last night, effectively liquidating itself and taking the decisive step in dismantling the old authoritarian system.

"Good-bye, Dictatorship, Goodbye," the liberal newspaper Diario 16 said in a banner headline today.

Royal Decree

Mr. Suarez and his 19 ministers met this morning to decide on the steps to follow up the Cortes vote, which was a victory for the Premier and for King Juan Carlos. Spain's 18 million potential voters must give their approval to the reform plans in the nationwide referendum and the Cabinet's first order of business was to set the date.

After the government session, an official communiqué was issued, saying, "The Cabinet approved a royal decree which regulates the procedures for the referendum."

It said that, for the first time in a Spanish referendum, the about 3 million Spaniards living and working outside the country will be permitted to vote. The decree also established the type of registration documentation that will be needed to identify voters, and the manner in which challenges to the results can be made.

Government sources said the referendum was expected for the middle of next month. They said the royal decree, announcing the date and spelling out the conditions, may be published in the Official Gazette as early as tomorrow, the first anniversary of the death of Generalissimo Francisco Franco.

Once the decree is published, the referendum can take place 20 days later or thereafter.

Rally for Franco

The hardline Francoists, who opposed the reform, suffered a 425-to-59 setback, with 13 abstentions, in the Cortes. The defeat was expected to take some of the steam out of the commemorative rally for Franco that the right-wing Confederation of Civil War Veterans has scheduled for tomorrow.

The right-wingers have begun to litter Madrid streets with tracts and pamphlets urging Spaniards, "Do Not Agree to the Destruction of the Fatherland. Come to the Plaza de Oriente Saturday at 1:30 p.m."

The plaza, site of the scheduled rally, is a main square where Franco used to address the people on important occasions.

Miss Hearst Freed in Custody Of Parents, Bail Is $1 Million

From Wire Dispatches

SAN FRANCISCO, Nov. 19.—Convicted bank robber Patricia Hearst was released to the custody of her parents today, free on $1-million bail after 14 months in jail.

U.S. District Court Judge William Orrick ordered Miss Hearst's release after weeklong negotiations by the newspaper heiress's attorney, Albert Johnson, and judges in San Francisco and Los Angeles.

At the same time, Judge Orrick denied defense motions for a new trial for Miss Hearst, who was convicted last March 20.

In his order, Judge Orrick said the primary question involved "whether the defendant is such a flight risk that this court has reason to believe that not one or more conditions of release will reasonably assure that she will not flee.

"I find that the defendant is not such a flight risk and I grant the motion to release her on bail subject to the conditions set forth in the order," he said.

Judge Orrick directed that Miss Hearst, 22, live with her parents, Randolph and Catherine Hearst.

Miss Hearst was prohibited from leaving California without court permission.

She must report by telephone each Monday and Thursday morning to provide precise information about her whereabouts and she must meet personally with her probation officer at least once a month.

Miss Hearst's father was ordered to put up $100,000 in cash in addition to the $1-million bail bond.

Miss Hearst was removed from the San Diego Federal Prison early today and taken to an undisclosed location. The way for her immediate release was paved earlier when $500,000 bail was deposited in Los Angeles, covering state charges she faces.

Miss Hearst faces trial on Jan. 10 in a case that involves a shooting at an Inglewood, Calif., sporting goods store. The incident occurred while she was a fugitive member of the terrorist Symbionese Liberation Army.

Miss Hearst, who had been kidnapped by the SLA on Feb. 4, 1974, was defended in an eight-week trial by criminal lawyer F. Lee Bailey. She was convicted of armed robbery and use of a firearm.

mith Says Kissinger Hinted t Aid if Blacks Halt Talks

By Robin Wright

ALISBURY, Nov. 19 (WP).—e Minister Ian Smith said ght that U.S. Secretary of e Henry Kissinger has indi- d that the United States and r Western nations would pro- "material support," including ary supplies, if black nation- s cause a breakdown in the eva peace talks.

a television interview, with journalists, the Prime Min- said:

is a fact that in the talks d with Dr. Kissinger in Pre- [on Sept. 19] at the com- ement of this exercise, that ld give me an assurance that e entered this agreement and llapsed because of what the Rhodesians had done, as ed to myself and my gov- ent, that he was absolutely inced that we would get a deal more sympathy from free world and also tangible tance. And he believed it d lead to greater material ort."

ssed on whether the "un- anding" might include mili- supplies, the Rhodesian r replied: "Yes."

added, however: "I wouldn't e have been given hard any fast undertaking." No de- were discussed, he said.

Washington, the State rtment said today that are no secret agreements Rhodesia and that Mr. h was mistaken if he ht there was an under- ding that he could get U.S.

e Department spokesman rt Funseth asserted, "As the tary of state has said, there

Another Anti-Israel Measure Passed by Unesco in Nairobi

NAIROBI, Nov. 19 (UPI).—Afro-Arab nations today pushed through a resolution at a United Nations conference condemning Israel for continued archaeological excavations in Jerusalem and calling for continued sanctions against the Jewish state.

Israel immediately branded the vote at the general conference of the UN Educational, Scientific and Cultural Organization "vindictive political warfare."

The United States said the resolution was "unconstitutional" and warned that it could threaten the future of Unesco itself.

Overcoming Western opposition, a working commission approved, by a vote of 70 to 25 with 14 abstentions, the five-page resolution that condemned Israeli excavations as a violation of international law and demanded continued sanctions against the Jewish state.

The sanctions represent the denial of all Unesco cultural funds —about $25,000 annually—to Israel. They were first approved two years ago by the last general conference.

It was the second anti-Israel resolution adopted here in two days.

Yesterday, another commission ignored Western objections and approved, 73 to 6, a draft resolution condemning Israeli educational and cultural policies in occupied Arab territories.

Both resolutions must receive formal approval by the 141-member plenary session next week.

Israeli delegate Nathan Bar Yaacov denounced today's measure as "discriminatory." The resolution, he said, "was motivated by vindictive political warfare."

'Gravest Doubts'

The United States, which with Israel, the European Economic Community and Scandinavian countries voted against the resolution, also denounced the measure.

Chief U.S. delegate Robert Kamm said: "I have the very gravest doubts about the future of an organization which cannot follow its own Constitution."

He said Unesco had no constitutional power to apply sanctions said said the resolution itself "contains fundamentally objectionable elements."

"To assume a power of judgment and retribution, to attempt to coerce a sovereign member state, is to go well beyond Unesco's constitution," Mr. Kamm told delegates.

In the Netherlands, Suspected Nazi Murderer Disappears Before Arrest

Political Furor Erupts Over the Handling of Sensitive Case

By Michael Getler

THE HAGUE, Nov. 19 (WP).—The disappearance of a 77-year-old Dutch millionaire just hours before the police were set to arrest him for questioning about his possible involvement in the murder of Jews in Poland during World War II has caused a political furor here.

Pieter Menten, an art collector, apparently fled Sunday night by car with his wife from their villa outside Amsterdam. The case is extremely sensitive here for several reasons.

One is the possibility that Menten was tipped off about his arrest, planned for Monday morning.

In a specially televised debate here in parliament yesterday, Justice Minister Andries Van Agt said that grave mistakes had been made in handling the case and added that "it is difficult for me to believe in a coincidence" with respect to Menten's getaway.

Mr. Van Agt himself, however, has also come under fire. This is potentially important because he is the political leader of the newly formed combined Christian Democrat parties here that will challenge the current ruling coalition for a larger share of power in federal elections in May.

[A lower house motion, calling for a special committee to investigate the disappearance, was withdrawn today after Mr. Van Agt said it would force his resignation.]

Furthermore, there have been allegations, thus far neither confirmed nor denied, that Menten, shortly after the war, gave some 200,000 guilders to the same Catholic People's party that Mr. Van Agt now heads.

Louis de Jong, director of the government's Institute for War Documentation in Amsterdam, said that "the amount of indignation in this country over this case is especially high, and rightly so. When every small thief is quickly caught and put in prison, it is hard to believe," he said, that a figure such as Menten could have just "slipped through the net."

He called it "downright scandalous" that no precautionary measures were taken to prevent his escape after allegations concerning him began to appear in the press.

Witnesses Interrogated

"He knew a couple of weeks ago that the Justice Ministry was sending out people, interrogating witnesses in Israel, Sweden and the U.S.," Mr. de Jong said.

Menten was convicted here in 1949 of collaboration with the Germans and served an eight-month sentence. The new allegations, however, go well beyond the earlier charges and Mr. de Jong maintains that this is the second time the Dutch judiciary has defaulted in pursuing Menten.

He said that in 1949 and 1950 the Israeli government provided the Dutch with other, more extensive information on his alleged activities.

Menten settled in Poland in 1924 and, Mr. de Jong says, moved from Krakow to Lemberg shortly after the German invasion of Russia. It is alleged now that Menten was an SS leader who was involved in executions of a large but unspecified number of Jews in the Polish villages of Uryez and Podhoroce around August, 1941.

Before his disappearance, Menten had denied such allegations after they appeared in the Dutch press, and threatened libel suits against newspaper and TV stations that quoted Jews now living elsewhere as saying they witnessed Menten taking part in these alleged crimes.

The police commissioner also revealed that public prosecutors in Hamburg had also sent a request a few months ago that Menten be questioned about a possible role in the murder of 39 Polish professors in the same area.

Wiesenthal Information

Nazi hunter Simon Wiesenthal has also entered the case, according to Mr. de Jong, by also alleging a possible link between Menten and the killings.

Attempting to explain the delays, Mr. Van Agt stressed the need for caution and having solid evidence before making an arrest, especially involving alleged crimes more than 30 years ago.

But he told parliament that the chief public prosecutor in Amsterdam had decided last week to arrest Menten and that after internal consultations the following day it was decided to pick him up Monday morning. When police arrived he was gone. No attempt had been made to watch him or revoke his passport.

Ironically, Menten brought his troubles on himself when he tried to auction some of his paintings last spring. The value and apparently questionable origin of his collection attracted attention, which eventually forced a cancellation of the auction.

One of those alerted was an Israeli journalist who had remembered information allegedly about Menten gathered in Israel after the war. The matter was pursued by a small Dutch magazine that eventually turned over its findings to the Justice Ministry, which, in turn, began sending out agents to take depositions from witnesses.

Mr. Van Agt said he had also received word from the Soviet government, in response to a Dutch request, that evidence in the case would be forthcoming.

With Syrian, Saudi Support

Sadat Backs Idea Only U.S. Can Bring Peace to Mideast

By Henry Tanner

CAIRO, Nov. 19 (NYT).—President Anwar Sadat, apparently with the blessing of other leading Arab regimes, is once more propounding the theme that only the United States can bring peace to the Middle East.

In a meeting yesterday with a congressional delegation led by Rep. Lester Wolff, D-N.Y., Mr. Sadat called on President-elect Jimmy Carter to come forward "in the coming spring with an American proposal" for a settlement between Israel and the Arabs.

To another congressional delegation a few days earlier, Mr. Sadat said that he and other Arab leaders were ready to go to Geneva and to sign a peace agreement with Israel. He assured the delegation, which was led by Sen. Abraham Ribicoff, D-Conn., that he posed "no preconditions" to negotiations.

Syrian Praise

To a third delegation, headed by Rep. Walter Flowers, D-Ala., he said that Congress should not make the error of pressuring the Arabs on "minor issues" like the Arab boycott, which he said represented symptoms but not basic ingredients to the Arab-Israeli conflict. "In six months, we can be in Geneva and negotiate a comprehensive settlement," he said.

One of the intriguing aspects of Mr. Sadat's initiative was that Syrian officials continued to heap public praise on the Egyptian leader while he was making these statements. A few weeks ago, they would have denounced him. But the cease-fire in Lebanon has changed many things.

It gave President Hafez al-Assad a mandate from Saudi Arabia, Egypt and other Western-oriented Arab leaders to continue his policy in Lebanon under Arab League auspices. To a large extent, he now controls Lebanon and the Palestine Liberation Organization.

Mr. Sadat, in exchange, has been forgiven for entering into a separate disengagement agreement with Israel last year without waiting for Syria. And he emerges, once more, as the happy advocate of the "American connection" and as one of the Arab world's spokesmen, together with President Assad and King Khaled of Saudi Arabia.

His declarations to the U.S. legislators broke no new ground, strictly speaking. But they impressed the members of the delegations, most of whom had never been in an Arab country and have a record of strong support for Israel.

Nevertheless, the statements were indicative of the new tone of moderation that the leading Arab regimes have decided to adopt in the wake of the cease-fire in Lebanon.

Straws in the Wind

Other straws in the same wind include the following:

- Arab officials speak with growing emphasis of the possibility of a single overall Arab delegation to the future Geneva peace conference as a means of getting around Israeli objections to negotiations with the Palestine Liberation Organization.
- Palestinian officials are hinting with increasing frequency that the PLO may be getting ready to set up a provisional government in exile without waiting for an Israeli withdrawal—a step that has been urged on them by President Sadat for two years. Farouk Kaddoumi, the head of the PLO's Political Department, raised the possibility yesterday at a news conference at the United Nations.
- Mr. Kaddoumi was also quoted as saying that the PLO would be prepared to assume authority in parts of the West Bank and Gaza after an Israeli withdrawal.

Nevertheless, diplomats here feel that it is premature to speak of an Arab "peace offensive."

Mr. Sadat did not create the opportunity for speaking to the U.S. legislators, but merely exploited it. All 37 of them came on their own initiative, without being invited by Egypt.

Main Obstacles

Egyptian officials, who regard Congress as the main obstacle to U.S. "even-handedness" in the Middle East, were pleased with the favorable reception that they thought the congressmen gave the President's declarations.

Mr. Sadat's declarations thus are regarded as tactical rather than signs of basic change in policy.

The intent, it is felt, was to create momentum for the convocation of a Geneva conference.

The leading Arab governments —Saudi Arabia, Syria and Egypt —are eager to get negotiations for an overall settlement started as soon as possible "without rushing Mr. Carter," as Mr. Sadat said.

The Arabs' desire for speed has several reasons.

The recent accommodation between Syria and the PLO and Syria and Egypt give them a new degree of solidarity and with it a chance to negotiate from a common platform instead of working at cross-purposes, as they have for at least a year.

Arab diplomats advocating negotiation also feel that the Palestinians, having lost much of their military strength, may be more pliable now than at any other time and thus less of a problem at the conference table.

Finally, both Egypt and Syria want to go on with economic development and foreign investment for which they need a climate of peace in the region.

Kreisky, Rabin Quarreling Over Bid to See Sadat

TEL AVIV, Nov. 19 (AP).—Austria and Israel are quarreling over allegations that Prime Minister Yitzhak Rabin blocked a meeting between Egyptian President Anwar Sadat and prominent foreign Jews.

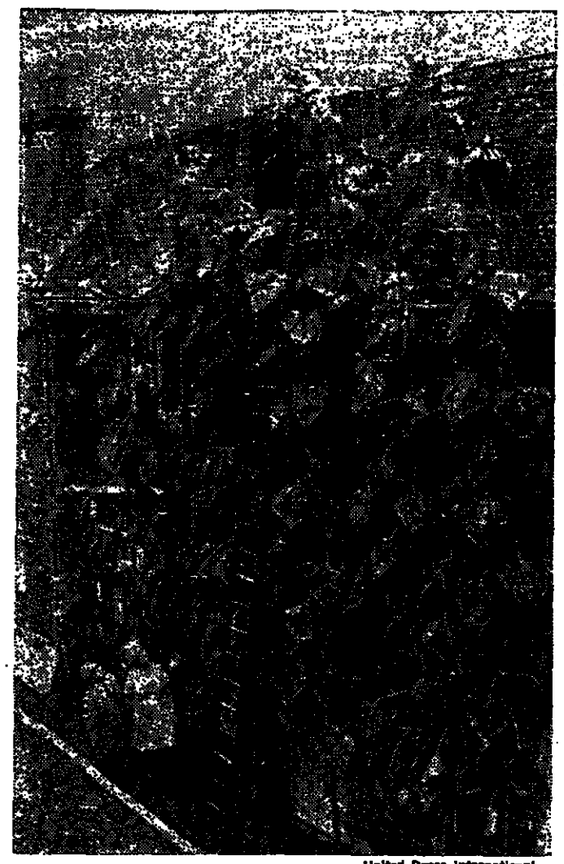
According to Israeli press reports, Austrian Chancellor Bruno Kreisky claimed Mr. Rabin foiled efforts to arrange the meeting a year ago. Mr. Rabin insists he placed no obstacle in the way of such a meeting and that it was Mr. Sadat who failed to follow through and invite the Jewish dignitaries, believed to include some U.S. Jews.

Clearly annoyed by Mr. Kreisky's accusation, Mr. Rabin declared earlier this week that "Small, naïve European nations, which have enough troubles of their own, are better off not interfering in matters that are none of their business."

In Vienna, Mr Kreisky, who is of Jewish descent, issued a statement saying Mr. Rabin's reaction was "incomprehensible" and that he, Mr. Kreisky, was *not* the source for the original Israeli newspaper story. The Vienna newspaper Die Presse said Mr. Kreisky was involved only in a small way in some of the mediation efforts, largely handled by Romanian President and Communist party chief Nicolae Ceausescu.

Mr. Rabin said the idea of a meeting was brought to him by Nahum Goldman, president of the World Jewish Congress. Mr. Goldman, meanwhile, said he was dismayed that Mr. Rabin had disclosed the affair.

Philippine Talks Slated in Libya



TRIPOLI, Libya, Nov 19 (AP).—The Philippine government and the Moslem insurgents will hold peace talks in Tripoli beginning Dec. 15, Libya has announced.

A joint communiqué issued at the end of an official visit by Mrs. Ferdinand Marcos, wife of the President of the Philippines, said the two countries "studied the development of the case of Moslems in the Philippines" and that Libya decided to be host to "the forthcoming negotiations . . . to find a just solution which satisfies both sides."

In the past, Libyan leader Moamer Qadhafi is believed to have given material and moral support to Moslem insurgents. Mrs. Marcos's visit is seen as easing Libya's firm stand, perhaps shifting it to that of a mediator.

Record Israeli Budget

JERUSALEM, Nov. 19 (AP).—Finance Minister Yehoshua Rabinowitz has presented a proposed record budget of $15 billion to the Cabinet.

United Press International.

CHAMP—Frank Kelland, 67, tending his super-tall sunflowers at his home in Exeter, England. His 23 feet, 6 1/2 inches tall giant won him the top prize in an annual sunflower growing contest for the second year in a row. This year's monsters were grown from last year's recordholders. He fed them special plant foods, manure and watered daily.

For Japanese, 30 Years After, A New Atrocity Is Revealed

(Continued from Page 1)

people were my friends and I did not have the courage to condemn them."

Miss Yoshinaga says that her crusade to expose 731 is incomplete because many questions are unanswered. When the war started, 731 switched from pure experimentation on germ warfare to the manufacture of deadly bacteria.

It is not known whether microbe bombs and other bacteria weapons were ever used against the armies of Mao Tse-tung and Chiang Kai-shek. Only 20 to 30 of 731's key personnel are still alive, according to Miss Yoshinaga, and some secrets may have died with the commander, an army surgeon, Gen. Shiro Ishii.

Gen. Ishii studied in the Soviet Union and Europe, specialized in pathology and bacteriology and alerted the army command to the possibilities of biological warfare in the early 1930s. Headquartered in the Chinese city of Harbin, the unit was disguised as a clean-water and epidemic-prevention center. Some workers there who telephoned to denounce the television exposé genuinely may not have known about the secret installation 20 kilometers south of Harbin. In 1939 and 1940 workers were brought from Ishii's home village in Japan to build the camp in conditions of total secrecy. A high fence surrounded a huge land area and protected the central jail, laboratories, cremation ovens and chimney tower.

Only visitors directly authorized by the commander of the Japanese Army in Manchuria were admitted. The human guinea pigs were brought to 731 in closed trucks.

"For reasons of security," Dr. Akimoto recalled yesterday, "the military police talked about 'handling materials.' Once they were inside, we called them 'logs.'

"The object was to plan and study bacteriological warfare."

Microbe Bomb

According to Miss Yoshinaga's research, Gen. Ishii ordered construction of a microbe bomb in mid-1941. There were problems with a metal casing since it heated while falling through thin high-altitude air. The scientists eventually packed plague-carrying fleas in heat-resistant ceramic bomb casings. A witness said that, in a series of experiments to test range and efficiency, prisoners were tied to trees while the lethal bombs were dropped around them.

Dr. Akimoto said yesterday that he believed Miss Yoshinaga's reporting was correct in all respects. He said that he attended monthly meetings at which scientists from other divisions reported on death experiments. He recalled a case in which horse blood was transfused into a prisoner to establish the fatal amount. Other experiments established the point at which wounds and frostbite became fatal.

In some experiments, certain victims in a group were vaccinated, then all were exposed to a disease. Prisoners who survived once were subjected to continuing tests until they died.

Miss Yoshinaga believes that during the war at least 3,000 prisoners were put to death at the rate of 600 to 700 a year.

Though 731 had a staff of 3,000, including guards and assistants, the nucleus was made up of 200 to 300 of Japan's best pathologists and bacteriologists—many personally recruited by Gen. Ishii from his alma mater, Kyoto University.

Serology, Service

Dr. Akimoto joined the unit in 1944 as a Tokyo University graduate with a brilliant research career ahead of him. He was told that he could combine serology with army service at the Harbin epidemic control unit.

"Within a month, I knew everything. I was in a living hell," he said.

"I went there believing it was preventive medicine and medical research," he said. "I protested three times to my superior. He told me, 'You came here of your own free will; you have no right to go away. What nonsense you are talking.'"

A witness told Miss Yoshinaga that on Aug. 9 or 10, 1945, the remaining prisoners were poisoned after refusing to commit suicide. He described feeling "unreal" as he carried and dragged away the bodies to be burned.

At first, the 731 personnel operated in peacetime Japan like a secret society. They hid, changed their names, helped one another find jobs. As the years passed and their fears faded, they became more confident.

A former officer told Miss Yoshinaga: "The spirit of 731 still exists and we can be proud of that." He insisted that the human experiments were only a small part of research that extended the frontiers of medical knowledge.

National Shame

Miss Yoshinaga believes that the story of 731 has been covered up in Japan out of a feeling of national shame. None of the major newspapers has ever launched a full investigation.

Former members of 731 now hold ranking positions in the Defense, Health and Welfare Ministries, pharmaceutical companies, hospitals and university medical schools. They even hold an annual reunion at a resort town.

Dr. Akimoto, who avoids all contact with his former colleagues, was appalled to hear of the reunion. "It's astonishing; these people have no shame," he said. Their work in Manchuria "had nothing to do with patriotism," he added. "It was elitism of doctors that grew like a monster."

Salvador Shootout

SAN SALVADOR, Nov. 19 (Reuters).—El Salvador's national university was closed today after two persons died in a gunfight between students and campus guards.

Violence Called Setback to Black Cause

Zulu Leader Deplores Rioting in South Africa

By Jim Hoagland

CAPE TOWN, Nov. 19 (WP).—Student protests and the wave of race violence that has swept South Africa this year have seriously set back African efforts to break white-minority rule here, Zulu leader Gatsha Buthelezi declared yesterday.

The chief went further than he has in past criticism of the student tactics, which have been praised by other black leaders for having reawakened black political action here. He said student efforts to organize strikes and boycotts "have fizzled out" and damaged the credibility of black economic action.

The Zulu chief described "well prepared mass action through strikes and boycotts" as the "most important tool we have in the struggle for liberation." Despite the setback, he said he would continue working toward such mass action and an end to apartheid.

"I share the anger of the young people. But self-mutilation does not further our aims," Chief Buthelezi said in an extended interview.

At least 375 blacks have been killed by riot police dispersing anti-apartheid demonstrations and putting down looting and stone throwing around Johannesburg and Cape Town since June 16. Hundreds of students have been arrested without charge in recent weeks, and hundreds more have fled the country to escape the widespread arrest campaign.

School Boycott

Student representatives said here this week that they would continue the nearly complete boycott of secondary school classes until the government releases "political prisoners" and abolishes separate, lower-standard education for Africans. New efforts at strikes and demonstrations will be made, these students said.

Students were able to organize a widely observed three-day general strike in August, but their call for a weeklong work and shopping boycott last month was generally ignored. This and other recent events have brought serious reassessment of strategies within the black community, where Chief Buthelezi's views still carry significant weight.

A hereditary chief and government-sanctioned head of the Zulu homeland, Chief Buthelezi tenaciously clings to the center position he has staked out between the student activists who denounce him and conservative tribal leaders who have also stepped up their attacks on him.

Relaxing at a resort near Cape Town after a month of visits to Europe, West Africa and Washington, Chief Buthelezi somberly acknowledged that his strategy of confronting apartheid from within the homelands scheme had been damaged by the nominal acceptance last month of independence by the Transkei homeland.

Transkei Chief Kaiser Matanzima's unilateral decision to accept Pretoria's grant of "independence" had "compromised the homeland leaders as such," the Zulu leader said. "Young people will think we're all going to stand in line and ask for independence. It is not true. We are South African citizens and will remain so."

The homelands independence scheme, which has been offered to eight other tribal chiefs, is intended to result in blacks living in white-controlled urban areas but having political rights only in the rural reserves.

Other problems from the right have come with the implicit threat by at least one major white investor to cancel a large investment plan for Chief Buthelezi's Zulu area if he continues to speak out forcefully for "black liberation."

Unity and Action

"I am going to continue preparing my people for unity and action," Chief Buthelezi said evenly. "It cannot be spasmodic action based on anger and political expediency and carried by throwing people off trains to keep them from going to w

"I don't believe in [illegible] leadership based on intimida[tion] blacks. Whites do enough that every day in South Afri[ca]

Zulu workers housed in ho[stels] at the edge of the embat[tled] Johannesburg township of So[weto] told Chief Buthelezi that t[he] attacked Soweto students' families during the worst ing this summer in retalia[tion] for student attempts to [keep] them from going to work.

Chief Buthelezi has also there is evidence that [police] policemen encouraged the [crowds] to go on the rampage [against] the students, an allegation [made] ed by the police but [widely] believed in the black comm[unity].

In Amazon Basin

Prospectors Bring Death to Brazil Indians

By Dan Griffin

WASHINGTON, Nov. 19 (WP).—The quest for uranium, oil and other mineral wealth in the Amazon River Basin has brought death and disease to thousands of Indians in the area and threatens the survivors with the loss of land rights and cultural extinction, two U.S. anthropologists said yesterday.

In a 106-page study, Shelton Davis and Robert Mathews of the Anthropology Resource Center cited the spread of African river blindness (onchocerciasis) following the construction of Brazil's highway network in the region, and epidemics of malaria and measles as consequences of the increasing penetration of Indian lands for economic reasons.

They quoted other anthropologists as saying that infectious hepatitis, influenza and tuberculosis also pose serious dangers to Indians in the basin, where large deposits of strategic and valuable minerals have been found.

In the study, released at annual meeting of the Amer[ican] Anthropological Association Mr. Davis and Mr. Mathews a medical report of Brazil's [Nat]ional Indian Foundation, [con]firming the spread of river b[lind]ness from a small area near Venezuelan border into se[ven] states and territories of Br[azil's] northwestern region.

Rates of Infection

In one state, according to report, a band of Yanom[ami] Indians showed 100-per-cent [in]cidence of infection, a tribe Tikunas had an 81.5-per-cent [in]fection rate, and eight tribes live along four other rivers a[re] ed lower levels of infection.

In announcing these find[ings] Mr. Davis and Mr. Mathews ported, the director of the In[dian] Foundation said that comb[ating] the spread of the disease [will] require the cooperation of se[veral] government ministries and expensive relocation of pe[ople] engaged in development pro[jects] bordering the highway. Th[e] rector added that the only re[al] for river blindness is a [new] medicine that is believed to Indians because of their la[ck of] physical resistance.

The foundation's announ[ce]ment, Mr. Davis and Mr. Mat[hews] said, confirmed the predic[tions] of two U.S. scientists w[hose] studies have shown a relation between the spread of the b[lack] fly, which carries river blind[ness] and the deforestation result[ing] the Amazon Highway netw[ork].

Two highways being built Brazil's Amazon network pass through areas inhabi[ted] the Yanomamo—both roads important to Brazil's mil[itary] government, strategically and nomically.

Aerial photographic su[rveys] have shown large reserves of ora, manganese, tin, bauxite coal in the region, while ge[ological] surveys have found de[posits] of zirconium, columbium, t[an]talum, gold and diamonds. In addition, large petroleum fields believed to lie along Brazil's ders with Peru and Colombi[a].

A greater spur to penetr[ation] of the Yanomamos' territory, ever, was the announcemen[t of] the discovery of an immense of uranium—perhaps the la[rgest] in the world, according to geologists—in the heart of of the Indian tribe's major

Doctor Says Loud, Heavy Snoring Can Make a Sleeper's Heart Stop

ANN ARBOR, Mich., Nov. 19 (UPI).—Loud, heavy snoring can be dangerous to your health, a specialist on sleep disorders says. In severe cases, it can even make your heart stop.

Dr. William Dement, director of the Sleep Disorders Clinic at Stanford University, told a physicians' conference at the University of Michigan that afflicted persons never really get a good night's rest.

He said that with one of every 1,000 adult males who snore heavily, it is a danger signal that his heart may stop while he is asleep.

Dr. Dement said that a snoring disorder known as "upper airway sleep apnea" is a real threat to a minority of adult males who:

- Are heavy "gasping" snorers—loud snoring, punctuated by periods of silence followed by a gasping for breath.
- Complain of extreme daytime sleepiness and fatigue.
- Are found by doctors in a sleep laboratory to have drops in blood oxygen and heartbeat irregularities during sleep.

Dr. Dement said that these persons never get a good night's sleep because they become partly awake many times each night when their upper throat and mouth tissues become too relaxed, cutting off air to the lungs.

The sleeper must then struggle and gasp to get air into his lungs. In severe cases, Dr. Dement said, this cycle can go on 400 times in a night—heartbeat irregularities included.

White Reporter Gets 6 Years' Jail In Johannesburg

JOHANNESBURG, Nov. 19 (UPI).—A South African court today sentenced a white political reporter to six years in jail on charges of promoting the aims of the Communist party and the African National Congress.

Anthony Holiday, 35, a former reporter on Johannesburg's Rand Daily Mail, which opposes the government's race policies, pleaded not guilty to the charges.

Holiday fainted in the dock as Judge A.D. Davidson began delivering judgment. After a brief recess during which Holiday recovered, the judgment and sentence were heard out.

Prosecution evidence in the trial—four months after Holiday's arrest—said he prepared and distributed "highly inflammatory literature" for the African National Congress and the Communist party, both outlawed in South Africa. The state also charged that Holiday developed clandestine ways to communicate with the congress abroad.

Two other South African newsmen, one black, the other white, turned state witnesses and said Holiday recruited them.

Strauss Party Votes to End Christian Democrat Alliance

(Continued from Page 1)

ways marched to a different drummer. In 1949, when the federal West German state was established, the Bavarians alone refused to ratify its Constitution—it did not seem to give them enough regional autonomy.

Détente Fight

When Willy Brandt began the process of reconciliation with the Communist states of Eastern Europe, the Bavarians led the fight in parliament and in the courts against what they saw as a "giveaway." Mr. Strauss has always thought that his aggressive, emotional style of campaigning was more efective than the cool manner favored by the Christian Democrats of the states in Protestant north Germany. He began saying so, loudly, after the narrow defeat last month.

Only once, under Adenauer in 1957, did the CDU-CSU alliance win more than half the vote. All the postwar West German governments have been coalitions, with the tiny Free Democratic party determining who ruled. Now led by Mr. Schmidt's foreign minister, Hans-Dietrich Genscher, it won 7.9 per cent of the vote Oct. 3.

If the break-up does take place, Mr. Schmidt's Social Democratic party will be the strongest single grouping in the Bundestag.

It is pressing for a full-scale investigation of charges that Mr. Strauss and his party got $12 million in bribes from Lockheed Aircraft Corp. when he was defense minister in the late 1960s. A 6,000-page file from a U.S. Securities and Exchange Commission investigation of the Lockheed scandals was delivered to Bonn last Thursday.

Warsaw Pact Expected to Call For Disarmament, Troop Cuts

By David Binder

WASHINGTON, Nov. 19 (NYT).—The meeting of seven leaders of the Warsaw Pact scheduled for next Wednesday and Thursday in Bucharest is expected to produce a new call for East-West disarmament moves and troop reductions, East European diplomats report.

They say the call will be addressed primarily to President-elect Jimmy Carter and to Chancellor Helmut Schmidt, whose party won the West German election last month.

The diplomats said the disarmament proposal would be a signal that the Soviet Union wished to complete as soon as possible a second-stage agreement with the United States on the limitation of strategic arms. The troop proposal would be aimed at invigorating the four-year-old, 19-nation negotiations in Vienna on mutual East-West troop reductions in Central Europe.

Dominant Themes

Ford administration officials familiar with East European affairs echoed the expectation that fresh disarmament and troop proposals would be dominant themes at the Bucharest meeting. The last such meeting took place in Warsaw in April, 1974.

The East European diplomats said the Soviet Union was especially interested in early completion of disarmament accords with the incoming Carter administration as a means of discouraging what one of them pictured as the strengthening of rightist forces in the United States. The diplomat said that in the East European view, the presidential campaign led to widespread growth of "anti-Sovietism" in U.S. and West German public opinion.

The diplomats said other major topics to be discussed at the Bucharest meeting would be a common posture toward the new leadership in China, economic relations with Western capitalist countries and efforts to further the work of the 1975 Helsinki Conference on European Security and Cooperation.

On the China issue, the diplomats said they expected the meeting to produce an overture for improving relations with the Peking leadership, in consonance with the tenor of recent messages addressed by the Soviet Union to China.

Sweden to Curb Entry Of Turkish Assyrians

STOCKHOLM, Nov. 19 (Reuters).—Sweden has announced strict curbs on immigration by Turkish Assyrians but said about 2,000 who had entered the country illegally would be allowed to stay.

Deputy Premier Per Ahlmark told a news conference, "It would be inhuman to deport the Turkish Assyrians already here. But we cannot have unregulated immigration." Assyrians are a minority Christian sect in several Mediterranean countries.

21 Castro Plots Laid to the CIA

HAVANA, Nov. 19 (Reuters).—Cuba said today that it had firm evidence that the Central Intelligence Agency was involved in at least 21 plots to kill Premier Fidel Castro between 1960 and 1971.

An eight-page article in the official weekly newspaper, Bohemia, listed alleged plots to kill Mr. Castro with bazookas, mortars or machine guns at public appearances. It also told of two plots to poison him.

Bohemia's article was seen here as part of a campaign against the CIA after the sabotaging of a Cuban airliner last month in which Mr. Castro accused the United States of direct involvement. Seventy-three persons died in the crash.

5 Sentenced in Seoul For Anti-Park Poem

SEOUL, Nov. 19 (UPI).—The Seoul Court of Appeals yesterday upheld a lower court's ruling and sentenced five former Christian college students to prison terms, ranging from one to three years, for their poem about the government of President Park Chung Hee.

The young men were arrested March 17 for writing and circulating a poem considered critical of the social and political climates under the Park regime. The court said it violated a Park edict banning all anti-government activities.

Smith Hopes For U.S. Arms

A turtle-neck pullover as light as a shirt and as warm as a sweater

If you don't like looking all muffled up when it's cold, here's a fantastic turtle-neck pullover from Lanvin 2 that's as light as a shirt but just as warm as a heavy sweater. It's in a cashmere-and-silk mixture - black, beige or bottle green to wear under a town suit, and also in more adventurous colors (F 550).

And for those wrap-up-warm weekends, Lanvin 2 will surely tempt you with a range of thick woolen jackets in an old-fashioned knit (F 890), or in alpaca with matching leather reinforcement (F 690).

Douglas Hicks, a former GI, embraces Karl Sondermann and hands a package of rations to Sondermann's wife, Eleanor, during a cheerful reunion at Hicks's home in Arlington, Va. They first became acquainted in Germany in 1945, as the war ended.

German Couple, Now Wealthy, Sought Out Benefactor

It's Risky Kindness Is Repaid After 31 Years

By Lynn Darling

WASHINGTON, Nov. 19 (WP).—Thirty-one years ago, on a day in May, Karl and Eleanor Sondermann sat young, in love, hungry and worried on a park bench in the chaos of U.S. occupied Germany.

Douglas Hicks, a young GI enjoying the 9 p.m. park curfew, struck up a conversation. Learning that Karl Sondermann was totally blind and destitute, he defied military regulations against fraternizing with Germans during the four months to provide the Sondermanns with food and with cigarettes and coffee to barter on the black market.

Since that night, the soldier has become a meat-cutter and the hungry couple millionaires, but the years only increased the Sondermanns' determination to find Douglas Hicks and thank him.

This week, in a tearful reunion, Mr. Hicks fed the Sondermanns once again. The German couple, who live on a 500-acre estate with its own deer preserve, had dinner at Mr. Hicks's small brick house in Arlington, Va., and ate prime rib roast that he had cooked himself at the grocery store where he works.

The Sondermanns remembered the last time they saw Mr. Hicks was in Germany. It was 1945, they were married, and they had come to the mess hall to visit him.

They were told that a convoy that was taking him back to the United States was leaving and they raced their small car down the line of trucks, blowing the horn in the series of long and short blasts that had been their meeting signal when he visited them. At the last minute, they saw him running toward them. He gave them a picture, scribbled with a Washington address on the back, wished them luck and went back to his truck.

"I can't believe it is happening," Eleanor Sondermann said. "After all these years, we have been hoping for this moment."

Last summer an American couple visited them and the Sondermanns told them the story and asked for their help. The Americans returned to Washington from their vacation and found Mr. Hicks's address in the phone book.

From this came an hourlong telephone call to Germany and from that phone call came a trip to Virginia where Mr Hicks and his wife, Sadie, spent 11 days as guests of the Sondermanns last month. And before he left, Mr. Hicks invited the Sondermanns to have dinner at his home.

"He was really nervous about the evening coming," said Douglas Hicks about his father. "He was excited about what they would think of his little home when they have so much."

The memories soon dissolved the nervousness. Mr. Hicks carved the roast and beamed as the Sondermanns recalled the four months they had known each other in 1945.

There German folk songs and Toscanini records filled the air as the Sondermanns recalled their first meeting, as Mr. Hicks towered over them in the chow line. "Suddenly there was this big policeman behind us," Mrs. Sondermann said, "and I was very tired and had so much fear. Because of all the propaganda we had heard about the Americans. And then he smiled and he was so nice and we liked him from the first minute."

They recalled how Mr. Hicks had given them packages of cigarettes that could be traded at the corner for potatoes, and how he was the only guest at their wedding and had taken the wedding pictures because Germans were not permitted to own cameras at the time.

Karl Sondermann, recuperating from a battle injury in Russia that left him partly blinded, was working as a locksmith in Alsdorf, about 100 kilometers northwest of Frankfurt, at the time Mr. Hicks met him. But Mrs. Sondermann said, the job provided them with little comfort. "The money was good, it was worthless," she said.

"The only way you could get food was if you had something to trade for it. Only the farmers had food and they did not want the money."

In 1946, the Sondermanns started a small business by manufacturing a new design of cookie-cutter. Now their firm, W. F. Kaiser & Co., has two factories that manufacture a variety of small kitchen appliances.

Douglas Hicks tried to explain why he had risked so much to help: "They were like me. The war had been forced on all of us. Karl was in the German Army, but he fought against the Russians, not the Americans."

Somewhere between the memories and the meal, they exchanged gifts. The Sondermanns gave Mr. Hicks a fancy German fishing reel and Mr. Hicks brought out two plain cardboard cartons. The Sondermanns looked at each other, puzzled, until they opened them and out tumbled the olive-drab containers of C-rations—like the ones he had given them in 1945. "Meal, Combat, Individual," said the containers.

"Oh, it is the rations. Let me look again," Eleanor Sondermann said, although it was hard to see through the tears. "This is the best souvenir I could ever have."

News Analysis

Voters, Nonvoters Alike Held Disaffected, Not Disillusioned

By Robert Reinhold

NEW YORK, Nov. 19 (NYT).—The relatively low turnout in the presidential election appears to reflect demographic factors, as well as a sense of powerlessness among the less privileged and the young, rather than disillusionment with the U.S. governmental system and its institutions, according to a survey conducted by The New York Times and CBS News.

The survey, which compared the attitudes and backgrounds of voters with those of nonvoters, found that the voters were just as disaffected as those who stayed at home on Election Day.

The poll tends to contradict pre-election fears that a widespread loss of trust in government after Watergate and other scandals involving abuse of authority would be the basis of a massive refusal to vote. For example, 55 per cent of the nonvoters felt that public officials did not care about people like them; 55 per cent of the voters said the same thing.

As in previous elections, the nonvoters were concentrated heavily among people under 30 and among the poor, the less-well educated and blue-collar workers.

Marked Difference

While those who failed to vote were no more likely than voters to be "alienated" from the political system in an actively hostile sense, they did differ markedly in that they tended to feel remote from government, to feel powerless and politically impotent.

The Times-CBS survey, in which 2,042 citizens over 18 years old were interviewed by telephone in all parts of the country from Nov. 4 to 8, also found:

• The outcome of the presidential race would probably not have been altered if all 146 million Americans over 18 and eligible to vote had gone to the polls. In fact, Jimmy Carter's popular margin over President Ford would probably have been much greater. The Democrat was the favorite among nonvoters by a margin of 52 per cent to 35 per cent. With full voter participation, he would probably have won by about 53 to 45 per cent, rather than 51 to 48 per cent.

• About 4 of every 10 eligible Americans had voted in each of the last four elections, while about one-fourth had not voted at all. The remainder were occasional voters, dropping in and out the voter ranks unpredictably. About 8 per cent of the electorate had cast ballots in every recent election but did not vote in the presidential election. This was offset by 9 per cent who had not voted in the past and voted this year.

• Fifty-two per cent of the nonvoters who were old enough to vote four years ago, but did not, abstained again this year.

• Six of every 10 of the voters who made up their minds in the last few days before the election voted for Mr. Carter. This cast doubt on pre-election suggestions that the momentum had turned in Mr. Ford's favor during the closing days of the campaign.

From a high of 60.1 per cent in the 1960 presidential election, presidential election turnout dropped to 56.4 per cent in 1972 and to 53.3 per cent this year. This year's vote was, however, neither as low as some had feared nor as high as some had forecast.

There are two schools of thought on nonvoting.

One holds that the trend reflects only the changing nature of the electorate, the growing mobility of Americans and the decline in strong identification with one political party or the other. Eighteen-year-olds were enfranchised for the first time four years ago, and the newly enfranchised—whether the young, the female or the black—historically have lagged in voting.

The other school maintains that something deeper and more alarming is at work, that alienation and cynicism have swelled the ranks of nonvoters.

Government as Servant

When asked in the survey whether government serves the "big interests" or "all the people," nonvoters said big interests by a 59-37 margin. Voters agreed, 58-37.

Those surveyed were asked: "How much of the time do you think you can trust the government to do what's right?" Nonvoters replied the following way: always, 7 per cent; most of the time, 36; some of the time, 51; never, 3. The voters' responses in those categories totaled 6, 37, 52 and 3 per cent, respectively.

However, the survey suggests strongly that there is an important distinction between distrust of the system and a feeling among some citizens that they are not part of it.

Thus, nonvoters were much more likely to say that one person's vote makes no difference, that there is no difference between the major parties or that it makes no difference who is president.

The voters and nonvoters gave sharply differing answers to the question: "If people don't like any of the candidates running for an office, should they vote for the one who is the 'lesser evil' or not vote at all?" Voters, by 75-21, opted for supporting the "lesser evil" while nonvoters said they preferred not to vote, 50-45. This feeling was especially prominent among those under 30.

More Young People

The growing entry of young people into the voting pool helps to explain at least a part of the nonvoting trend. The postwar baby boom and the enfranchisement of 18-year-olds have expanded the under-30 portion of the electorate from 18 per cent in 1960 to 31 per cent today.

Some students of political behavior say that the greater mystery is not why people do not vote but why they do, given the fact that it is usually hard to see the impact of one vote, that voting takes time and effort and may lead to the voter's being called for jury duty.

Fifty-three per cent of the voters interviewed cited "civic duty" as the reason they went to the polls. Only 1 in every 10 said he or she thought that voting would make a difference, and only 1 in 7 voted because of strong feelings about the candidate backed. Just 17 per cent said they voted because they considered this a "very important election."

Another possible clue to nonvoting emerged from responses when interviewees were asked to agree or disagree with this idea: "The country needs more radical change than is possible through the ballot box."

Voters disagreed by 52 to 41 per cent. Nonvoters agreed, 58 to 33.

No Elected Officials

Carter Names 11 as Advisers On High-Level Appointment

PLAINS, Ga., Nov. 19 (AP).—President-elect Jimmy Carter named 11 persons today who will advise him on cabinet and other high-level appointments.

Mr. Carter's press secretary, Jody Powell, told reporters today that the appointment advisers are "representative of the types Gov. Carter and Sen. Mondale are depending upon" in making their key appointments. The advisers include no elected officials.

They are: The Rev. Theodore Hesburgh, president of Notre Dame University; Lucy Benson, former director of the League of Women Voters; Lane Kirkland, secretary-treasurer of the AFL-CIO; Vernon Jordan, executive director of the Urban League, and Carol Foreman, executive director of the Consumer Federation of America.

Also Marian Wright Edelman, a black woman who heads the Children's Defense Fund; Robert Strauss, chairman of the Democratic party; Hank Lacayo, director of the Hispanic division of the Carter campaign; Owen Cooper, a Jackson, Miss., businessman and former moderator of the Southern Baptist Convention; Irving Shapiro, chairman of the board of E.I. du Pont de Nemours & Co., and Patricia Harris, a lawyer who was a chairman at the 1972 Democratic convention.

Mr. Powell said the advisers would not meet as a committee but would make individual suggestions for appointments.

Wide Choice Sought

WASHINGTON, Nov. 19 (NYT).—Mr. Carter has instructed his talent scouts to provide him the names of at least one experienced Washington insider, someone from outside the capital, a woman and a black for each position in his cabinet, to give it what a senior aide yesterday termed a representative "mix."

"You'll see a mix for each job," said Hamilton Jordan, the former campaign director who now heads the Carter personnel hunt. "You'll see [a cabinet] with people from all over the country: women, men, people of different races, people of different philosophical views."

He said that Mr. Carter had specifically requested that at least one insider and one outsider be proposed for each cabinet position, as well as a woman and black in every instance possible.

"I do not think he'll begin his cabinet announcements before the middle of December," Mr. Jordan said, putting that date two weeks later than Mr. Carter had done previously.

It was clear from a number of Mr. Jordan's comments that the precarious state of the economy has now become a dominant concern of the President-elect. When asked which of the many campaign pledges that Mr. Carter had made would be given top priority once he was in the White House, he replied that "economic problems are basic" to most of the other priority proposals.

He also underscored the Carter camp's desire to move quickly into preparations for its own budget proposals by saying that the appointment of the director of the Office of Management and Budget would come "early" along with several other White House staff appointments that he expected to be made "very soon."

Carter Aides Vow World Food Projects

By Clyde H. Farnsworth

PARIS, Nov. 19 (NYT).—Economic advisers to President-elect Jimmy Carter have told West European officials to expect U.S. initiatives early next year aimed at improving the world food situation.

One of the goals, according to these officials, will be a system of world grain reserves to moderate price fluctuations and serve for emergencies.

The Americans are said to feel that bumper harvests this year in the major producing nations, including the Soviet Union, offer a good opportunity to get the reserve system accepted by the international community.

There are even hopes of bringing the Soviet Union into the network.

The United States has already proposed establishment of world reserves, and has cited a figure of 30 million tons of grain as an ultimate objective.

There have been desultory negotiations in the International Wheat Council, a body in which the Soviet Union participates. A negotiating session is scheduled for later this month in London.

The cost of buying 30 million tons of grain, at current prices of about $100 a ton, would be $3 billion. In addition, it would cost hundreds of millions of dollars to build the storage facilities.

Two key questions are how to divide the costs and where to build the facilities.

In the United States, where sagging farm income was an issue in the recent elections, Mr. Carter has said that he will reverse policies of the Republican administrations and ask the Commodity Credit Corporation to start rebuilding grain stocks. This would be intended to back price-support moves.

Philippines Deports U.S. Catholic Priest

MANILA, Nov. 19 (Reuters).—A U.S. Roman Catholic missionary, the Rev. Edward Gerlock, was deported from the Philippines last night, accused of taking part in political activity.

Father Gerlock, 36, a member of the Maryknoll order who had lived here for 14 years, was put on a Philippines Air Lines flight to San Francisco after an official hearing.

Dallas Cancels Kennedy Rite

DALLAS, Nov. 19 (AP).—For the first time since President John Kennedy was assassinated 13 years ago, the city where he died will not mark the anniversary of his slaying with a public ceremony at the Kennedy Memorial.

City officials said the reason for the cancellation was a decline in participation of citizens.

"It had gotten to the point where we had more organizers than participants," said David Miller, a spokesman for Mayor Robert Folsom. Mr. Miller said Mayor Folsom has asked the Greater Dallas Council of Churches to encourage its members to observe the anniversary in their places of worship.

In previous years, city officials led a prayer service and placed a wreath at the foot of the John F. Kennedy Memorial, two blocks from where he was shot on Nov. 22, 1963, as he rode through the city in a motorcade.

New U.S. Curbs on Jet Noise Must Be in Effect in 8 Years

By Douglas B. Feaver

WASHINGTON, Nov. 19 (WP).—Transportation Secretary William Coleman jr. yesterday announced a far-reaching policy on aviation noise that will require U.S. airlines to lessen the loudness of jet engines within eight years.

More than 1,600 jets—about three-fourths of the U.S. fleet—are louder than the standards Mr. Coleman is requiring. Those planes must be either replaced or quieted. The total cost to U.S. airlines will depend on how they choose, but the Department of Transporation's "most realistic" estimate is from $5.8 billion to $7.9 billion.

The new rule is only part of a policy that addresses a number of technological and legal problems and attempts to spell out for the first time the federal, local and industry roles in noise reduction.

Additionally, Mr. Coleman said that airplanes of the future will be required to be quieter still and that the Federal Aviation Administration will order the use of techniques in piloting planes that would reduce noise on the ground.

Public Pressure

There is growing public pressure, increased by last spring's Concorde debate, to reduce aviation noise. Federal officials estimate that 6 to 7 million Americans live where airplane noise is a "significant annoyance," and Mr. Coleman said that such a noise is an "unacceptable intrusion."

There have also been legal and economic pressures on the aviation industry. For the last five years, airport operators have paid out more than $25 million in legal judgments in aviation noise suits.

Some airports have imposed curfews on jet flights and the aviation industry has worried that such local measures would become widespread and seriously interfere with scheduling flights for freight as well as passengers.

But Mr. Coleman did not go as far on those legal questions as the industry had hoped. Under a Supreme Court ruling, airport operators are liable for noise suits. Mr. Coleman clearly wants to keep it that way.

At the same time, he said that some kinds of local curfews at some airports, and various other procedures, might well be appropriate on a case-by-case basis. However, he said, the FAA would reserve the right to review such rules and determine whether they interfered unduly with interstate commerce or international trade—matters the Constitution leaves in federal hands.

As for the Concorde, Mr. Coleman said that noise rules for supersonic airplanes would be adopted within 30 days after the 16-month test period of Concorde flights to Dulles International Airport here is concluded next October. At the moment, there are no noise rules for supersonic airplanes.

A phased program will work as follows:

• The Boeing 747s that violate the rule (about the first 50 built) will be completely refitted within six years. Half will be done within four years. Most 747s, and all the other jumbo jets, meet current noise standards because of the quiet-engine technology that accompanied them.

• All two and three-engine jets must be quieted within six years, with one-half completed within four years. Jets of this class include the Boeing 727 and McDonnell Douglas DC-9.

• Older four-engine jets, such as Boeing 707s and McDonnell Douglas DC-8s, must be quieted or replaced within eight years, with one-quarter to be completed within four years and one-half within six years. Because the useful life of many of these planes is nearing an end anyway, aviation observers expect the airlines to replace them rather than modify them.

• International airlines flying to the United States, and U.S. planes used only in international service, will be exempt for three years from the rule while the United States tries to negotiate an equally tough international standard. However, by the end of the eight-year period, all planes flying into U.S. airports must meet the standards.

Union Reaches Pact With General Motors

DETROIT, Nov. 19 (AP).—The United Auto Workers and General Motors Corp. reached agreement on a new national contract today, about 12 hours after 80,000 workers began an unprecedented "mini-strike" at 16 key General Motors plants, the union announced.

The settlement, which must be ratified by the union's rank and file, was based on the industry's pattern agreement set at Ford Motor Co. Union leaders instructed the workers at the 16 plants to return to work at their next scheduled shift.

U.S. Seeking Radiological Weapons Ban

Proposal Is Made In UN Assembly

By Don Oberdorfer

WASHINGTON, Nov. 19 (WP).—The United States yesterday proposed an international agreement to ban the use of radiological materials as weapons of war. Chemical and bacteriological warfare has been prohibited under international conventions, but relatively little attention has been given to radiological war.

The U.S. proposal, submitted to the United Nations General Assembly in a speech by director Fred Ikle of the Arms Control and Disarmament Agency, did not spell out the details of a radiological pact. Instead, Mr. Ikle said the United States suggests that next year the Geneva disarmament conference or another appropriate forum undertake a negotiated agreement.

Mr. Ikle called radiological war "a potentially significant future danger." No nation is known to be making radiological weapons, but Mr. Ikle indicated in his speech that the rapid accumulation of radioactive materials in nuclear-power production had prompted the U.S. proposal.

No Definition

Although a definition of "radiological warfare" was not submitted, Mr. Ikle made it clear that he did not refer to nuclear weapons explosions, the most likely source of extensive radiation danger. The U.S. proposal is evidently primarily concerned with possible use of radioactive materials—such as plutonium or strontium 90—to contaminate areas held or controlled by an enemy.

There had been little controversy about the proposal within the executive branch of government, officials said, although some elements of the Defense Department were said to have been reluctant to go along at first. The officials said Pentagon staff aides briefly considered the use of radiation to stop North Vietnamese infiltration to South Vietnam in the early 1960s but gave up the idea as impractical.

After the proposal had been cleared by government departments, some State Department officials reportedly objected, saying that the United States should make no new foreign policy moves in the presidential transition period. However, allied nations and the Soviet Union had already been briefed, raising the likelihood of embarrassment over a last-minute cancellation.

Recent concern about the spread of radioactive material has centered on the potential threat of its seizure by terrorists.

Turk Is Operated On

ANKARA, Nov. 19 (Reuters).—Turkish President Fahri Koruturk was operated on today at a military hospital here for removal of gallstones, a hospital spokesman said.

"Camera of the year."

Photo magazine said it in their first article on the Pentax K2. The editors went on... "A skilful synthesis of recent technical developments, a special shutter, a highly reliable metering system and an exceptional basic lens... all these elements serve to make the Pentax K2 the star of this year's photographic salons".

A truly versatile camera, the Pentax K2 is automatic *or* manual. If you like, the K2 will select the correct shutter speed for you—electronically—from an infinite range between 1/1000 and 8 seconds. Or you can choose manually one of the 15 speeds from B, 8 seconds to 1/1000, match the needle and shoot.

Most remarkable, perhaps—with all its engineering perfection—the K2 retains the famous Pentax "feel". It's light, compact, so designed to fit your hand that it actually becomes a part of you. In brief, a photographic pleasure.

SMC PENTAX K2

Shown is the SMC 45-125mm f/4 zoom. Also available, 3 "standard" lenses, a full range of others.

K2 The Ultimate Pentax.

Asahi Pentax cameras are guaranteed quality products of Asahi Optical Co., Ltd., Japan.

Yugoslavia in the Middle

From Leonid Brezhnev, visiting in Belgrade, comes metaphorical assurance that the Soviet Union has no plans at all to exploit the political and ethnic uncertainties of post-Tito Yugoslavia in order to bring that independent Communist nation back into the Soviet fold. Some in the West "are trying to present Yugoslavia as a poor helpless Little Red Riding Hood whom the terrible bloodthirsty wolf—the aggressive Soviet Union—is preparing to tear apart and swallow," the Soviet leader declared, evidently by way of responding to statements that were in fact made during the U.S. presidential campaign. But, he insisted, it's not so.

Two cheers. This does not exactly square with the "Brezhnev doctrine," the right long claimed by Moscow—and expressed by Mr. Brezhnev himself at the time of his intervention in Prague—to intervene in other socialist countries at will. But such words are not to be sneezed at. They help reinforce natural political inhibition that, in a moment of temptation, might be overcome. The Yugoslavs have a strong army, equipped in part with U.S. arms, whose prime mission is to ward off Soviet attack, and a huge well-armed territorial militia. These forces are the chief bulwark of their security. But they have always valued public declarations of intent, and so Mr. Brezhnev's words were no doubt of some comfort to them.

There's something else Yugoslavia could do to ensure its post-Tito fortunes. It could smooth out its relations with the United States. For geopolitical reasons—to maintain the balance that has kept the peace in Europe since World War II—the United States has had and has often demonstrated a great interest in Yugoslavia's independence. Yet too often in recent years Belgrade has seemed to go out of its way to conjure up grievances and to pick fights with Washington. It has taken gratuitously anti-U.S. positions on issues like the Mideast and Puerto Rico (even while some of its officials mumble their better judgment privately). It has treated certain bilateral incidents in a way calculated to maximize unpleasantness. It wrongly arrested and held the U.S. citizen Laszlo Toth, for instance, and it continues to suggest official U.S. connivance with Croatian terrorists.

According to the prevailing strain in official U.S. thinking, this sort of Yugoslav conduct should be put down to understandable jitters and accepted with a grimace and a gulp. But others expect Yugoslavia to measure its attitude towards the United States on daily issues according to the undeniably overwhelming significance that the United States has for Belgrade as a counterweight to Soviet pressure. We think this makes more sense. It is troubling to see Yugoslavia using the U.S. geopolitical interest in its fate as license for a policy that is not so much independent as unnecessary. We don't think the United States should or will forget that geopolitical interest. But we fail to understand why Yugoslavia, at this time or any other, would want to make it hard for the United States to remain its friend.

THE WASHINGTON POST.

The Mars Experiment

Mars went behind the sun earlier this month, thus interrupting for a time communications between earth and the instruments landed on the Martian surface by the successful Viking-1 and 2 rockets. The temporary halt in the receipt of new data permits a preliminary evaluation of what has been accomplished since last summer's historic landings.

Certainly the whole field of Martian studies has been revolutionized and provided with an abundance of new data that will take years to assimilate fully. Popular attention inevitably has focused on the search for Martian life, a search to which scientists for the moment can give only an equivocal answer. The puzzling data from Mars to date neither prove nor disprove that Martian life exists or existed; different experiments appear to point toward different conclusions.

Even more important, however, the findings on Mars are forcing a new look at questions about the origins of life on earth. For example, one way of interpreting the results on Mars is the hypothesis that Martian soil contains a superoxidized form of iron which reacts with water to release oxygen and normal iron oxide, or rust. Now the possibility is being discussed that such a superoxide existed here on earth in the primeval years and that it is this weird substance that provided the oxygen that now makes earth such a hospitable planet for human and other familiar life forms. The classic explanation that plant life produced most of earth's free oxygen is now being re-examined.

Back in 1953, a fundamental experiment showed that an electric spark in a chamber containing water and other simple chemicals could result in the formation of a central complex organic compound. This experiment seemed to suggest that the formation of life here on earth was rather a straightforward process, one that was almost inevitable given the forces and chemicals known to have been present in the first several billion years of earth's evolution.

But now the data from Mars have reminded scientists that electric discharges and accompanying ultra-violet radiation can also break down and destroy complex organic molecules as well as form them. All of a sudden the conventional wisdom about the development of life on earth seems neither so certain nor so inevitable as it did before the Viking landings last summer.

Perhaps all that can be said is that the science of life is now in the midst of one of those dizzyingly rapid periods of progress during which all previous conclusions are suspect while the final outcome of current heated debates is still unknown. Yet even to say this is to agree that the Viking experiments have already been even more fruitful than their backers expected.

THE NEW YORK TIMES

The Dolphin Limit

The mass killing of dolphins and porpoises is a modern tragedy of technology. These friendly, intelligent creatures are the pilot fish whose surface activity is a clue to the presence of large numbers of tuna below.

Since 1961, tuna fishermen have used an efficient technique in which huge nets are closed over their quarry. Many of the nearby dolphins escape but many others die from suffocation when their flippers or snouts become entangled in the nets. Tuna fleets have developed various maneuvers to keep those losses to a minimum, but tens of thousands of porpoises and dolphins are still fatally trapped each year.

Under the terms of the Marine Mammals Protection Act of 1972, the National Marine Fisheries Service each year establishes an allowable quota of porpoise kills. When that quota was recently exceeded, the fisheries service bravely ordered tuna fleets to halt the taking of tuna for the rest of the year—in the face of heavy pressure and protest from the industry. Last week, the U.S. Court of Appeals for the Ninth Circuit refused to lift this ban.

The fisheries service and the court have both acted in the public interest in difficult circumstances. The troubling fact remains that no one yet knows the actual size of the dwindling porpoise and dolphin population. As a result, it is impossible to prove that the allowable quota is still too high or that, as feared, the dolphin may already be becoming an endangered species. Additional research and uncompromising enforcement are emphatically necessary if the humble tuna fish sandwich is not to be the occasion for an ecological disaster.

International Opinion

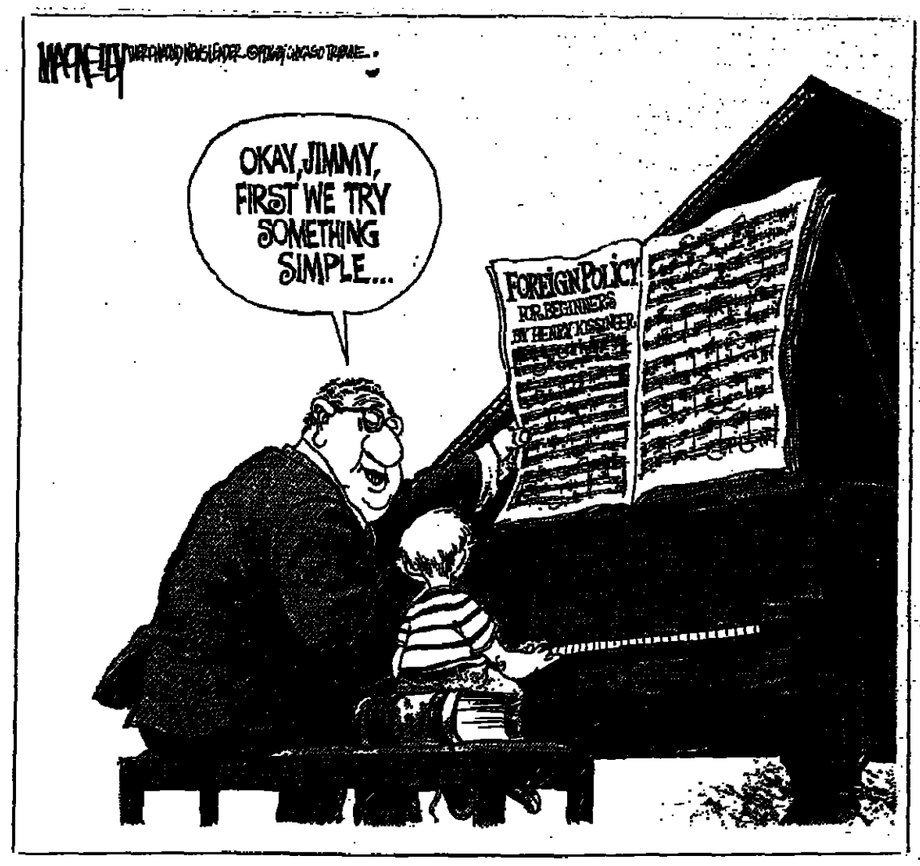
Difficult Job of Soares

Mario Soares has achieved a great deal for Portugal since the country turned back from its gadarene rush into economic and political disaster just about a year ago, and especially since he took office as Premier in May. In this he has been aided, and at times prompted, by President Eanes. It is a difficult job that Mr. Soares is trying to do and there is always the chance that he will not succeed. His failure would almost certainly mean a return to military government, even though the constitutional forms for civilian government are now in being. The Socialist party is in a minority in Parliament and is committed to measures, including a personal austerity program and the reform of trade union structure, from which the Communists must be tempted to make capital . . .

—From the Guardian (London).

In the International Edition

Seventy-Five Years Ago



November 20, 1901

PHILADELPHIA—An interesting announcement has just been made here by Sir Henry Irving with regard to his next summer season at the Lyceum Theater. In addition to the repertory in which he will appear with Miss Ellen Terry, the distinguished actor has specially engaged Miss Cecilia Loftus to play the role of Margaret in "Faust" which he intends to revive. Also, Miss Terry denied the rumor that she is planning to resign from Sir Henry's company.

Fifty Years Ago

November 20, 1926

NEW YORK—Speaking before an audience of fellow actors gathered in his honor at the Bijou Theater, Eddie Cantor transformed a farewell party into a memorial service for Harry Houdini. He eulogized the dead magician, who had been one of his close friends. Many speakers joined in the tribute to Houdini, crediting him with being a charitable man and a great artist. It was suggested that a tablet be erected to his memory in the Jewish Theatrical Guild building.

No Springtime for Henry

By C. L. Sulzberger

VARAVILLE, France.—A short time ago I was interested to read Sen. Abraham Ribicoff's suggestion that Henry Kissinger, the outgoing secretary of state, should be appointed as President Carter's special envoy to negotiate peace in the Middle East. On the same day Egyptian President Sadat affirmed his own desire for an Arab-Israeli peace.

Just before these twinned statements, I had perused a thoughtful study along similar lines by Robert Paul Luc, a retired French ambassador who served at various times in the United States and is well acquainted with U.S. views. Oddly enough he comes up with a proposal strikingly similar to Ribicoff's. Discussing Kissinger's method of approach to the Middle East, he observes:

"I sometimes marveled at the statements of outsiders who were critical and at their warnings that a step-by-step policy could not bring about a general settlement. I would have liked to know what they themselves would have been able to achieve, and how.

"I was however impressed by Mr. George W. Ball's case for such a settlement on the morrow of the Yom Kippur war, taking advantage of all the factors that might have worked in that direction. But I could not overcome my doubts on the possibility of achieving agreement on all the main issues that he felt should and could have been settled then.

"Therefore, I regretfully could not visualize a realistic alternative to the 'tactical' approach of the secretary of state as opposed to the 'strategical' one he had advocated. It is true that Mr. Kissinger did not restore final peace to the area and was wrong and not always of good faith when he strove to keep Europe outside the picture and mistaken in his dealing with the PLO issue. Nonetheless, he succeeded in achieving major strides forward that very few would have believed possible.

"Still, it is easier to criticize him on this count than it will be to find a successor able to further his peace endeavors in the Near East, so important to the maintenance of peace in the world! From this viewpoint one is bound to feel alarmed at the prospect of his departure.

"I wonder whether, regardless of party politics, it would not be a proof of wisdom on the part of whoever wins the November elections to keep him 'in reserve' as a possible negotiator in the Arab-Israeli conflict, with the authority to pursue, when needed, the work that no one else could probably undertake successfully, whether or not he retains any permanent official capacity."

Divide and Rule

Luc has less admiration for certain other Kissinger policies and, indeed, describes him as "the only secretary of state since the war to follow systematically the old precept: 'divide et impera' (divide and rule)" with respect to Europe. He concludes:

"He never entirely got rid of the idea that Europe's legitimate interests were only regional in nature and did not extend to the world scene, which he tended to consider as the reserved field of the superpowers."

The fact is that Luc, despite reservations on some aspects of Kissinger's goals and methods, dispassionately considers he is the best hope for moving the Middle East from a temporarily frozen state of chaos to a permanent condition of peace.

I fully share and endorse the Ribicoff-Luc views, arrived at quite independently. Kissinger knows all the principal players in the Arab-Israeli game and cherishes the high esteem of the most important among them. No other American, whatever his title, can rush rapidly into that dangerous, intricate situation and hops to make any headway at all, for months. Indeed, the attempt itself might be counterproductive.

There really is no reason on earth why the Arab-Israeli Geneva conference should not be reconvened even before Carter is inaugurated and why Kissinger, first as secretary of state, subsequently as special envoy, should not there represent a bipartisan and continuing U.S. policy. We have had other high-powered special envoys before—like Gen. Marshall, Averell Harriman and Ellsworth Bunker.

Nor should adoption of such a temporary appointment in any way interfere with the obvious long-term requirement—which in due time must be recognized by a U.S. president—that he requires two diplomatic officers of equal rank in his cabinet: One to stay home as secretary of state, supervising policy and negotiating with Congress; and one to travel constantly as secretary for foreign affairs, negotiating with everyone else.

Economy and Defense

SOS From Schmidt To Carter on Europe

By Rowland Evans and Robert Novak

BONN.—West German Chancellor Helmut Schmidt, coalition victor in the October election here which was even closer than the U.S. presidential election, is sending an SOS to President-elect Jimmy Carter on behalf of the Western alliance. Take the lead in finding the elusive "joint Western position" to stave off economic disaster and fortify the West's defenses before it is too late.

In an exclusive talk with us—his first interview on the Nov. 2 U.S. election—Schmidt praised defeated President Gerald Ford for having built up in Europe "the highest degree of confidence" in the United States in his brief presidential term.

Yet, he said, "the world recession now persists for three years" and there is not the slightest assurance that partial economic recoveries are any more than "upward bumps in a downhill road."

Schmidt wants a kind of permanent floating game of Western cooperation and consultation, an "intensive personal exchange of minds." The object: align the West and Japan in a new effort to stop the economic decay growing out of the "structural upheaval" in monetary and economic patterns, with particular attention to raw materials prices (including oil) and the balance of payments.

Behind Schmidt's insistent appeal for common economic and monetary policies is the riding fear in both his own Social Democratic party (SPD) and the opposition Christian Democratic party (CDU) that the West's military defenses are beginning to show gaping holes at the same time the Soviet military buildup is moving at what Schmidt told us was "enormous velocity."

Although Schmidt ignored the subject, lesser officials said that strongs hints to Moscow have been quietly dropped through diplomatic channels here, informing the Kremlin that the United States would not tolerate the Soviet naval buildup for long without launching a comparable naval rearmament, which would touch off a vast new arms race.

Defense Budget

Schmidt, a hard-line realist compared to the powerful left wing of the SPD, said nothing of this, but expressed confidence that the Carter administration, when confronted with the full picture of Soviet vs. Western defense spending, will be far more inclined to raise rather than cut the defense budget.

What singularly worri Schmidt about the obvious we nesses now showing in the We defense is that they drama the far larger U.S. and W German contributions to NA tending to lift them to i eminence over other NATO m bers. Down that road, Schm thinks, lie the gravest perils West Germany, Europe and West.

In the first place, the el tion of Bonn to favored st in Washington would dam the slow progress being m toward Western unity, ra nightmare fears about a re gent Germany. For that re alone, Schmidt feels the by many NATO members ara reducing their NATO con tions must be stopped and ped fast, so that NATO do become a cloak, or disguise, a U.S.-West German alliance.

But worse, Schmidt wa that any tendency that weal the European motion—admitt slow—toward real political u would be the start of a d watch for the West in Be The West's credibility in ma Berlin the litmus test of its w postwar policy of defen Western Europe from the C munist East would soften. Moscow would move fast to u it collapse.

Lack of Strategy

Accordingly, Schmidt and advisers want NATO to cont trying a mutual reduction Western and Communist, t (MBFR) in Central Europe. see that as the only pos way to delay the weakening NATO now going on by N members acting on their own with no overall alliance stra

That Schmidt, a supreme ist, should have to put such in MBFR, stalled dead in water in the Vienna talks the Warsaw Pact, tells m about the level of optimism It tells much, too, about reason behind Schmidt's SO Mr. Carter. Schmidt, now senior head of government as NATO's big five, speaks f wider Europe than West many and from a shrewd kn edge of the United States its crazy-quilt politics.

Whatever pleasure Mr. C may take in publicly ben the Germans for their mi deal with Brazil, the Presid elect had better not ig Schmidt's SOS, for if the Germans need the United St as Schmidt's words fairly sho Mr. Carter surely needs the Germans.

Headhunting for Talent in Hungary

By Malcom W. Browne

BUDAPEST—"I get the talent I need because I can pay for it," the Communist industrialist said, thumping his imposing desk. "Headhunting is just one of our practices that might seem familiar in the West, and we do it well."

The pirating of managerial or engineering skills from one enterprise to another has become so widespread in Hungary that the Communist government's economic-control apparatus has taken cautious steps to curb it. However, since the culprits are often the most important earners of hard currency, enforcement is mild.

Among executives constantly seeking to lure technical experts to work for his enterprise is Csillag Gesa, general manager of the Enterprise for Office Machines and Mechanical Instruments, who said: "Roughly 50 of my new engineers have been pirated from other Hungarian firms. Their average pay elsewhere was between 3,000 and 3,500 forints [$150 to $175] a month, but here the average is 4,000 forints and I can go as high as 6,000."

Fringe Benefits

In comparison with Western salaries, those of key Hungarian industrial managers seem small, but in a Communist nation the key men receive a great range of fringe benefits, including housing and automobiles, and live fairly well.

Mr. Gesa explained that he could afford especially high salaries because 90 per cent of the typewriters, cash registers and other machinery his enterprise produces are exported—much of it to the West. It makes 120,000 office typewriters a year for Hermes, a Swiss concern, to be sold worldwide under the Hermes label. Annual production at the enterprise's four plants is worth $20 million, Mr. Gesa said.

Compared with other countries in the Soviet bloc, Hungary allows its industrial managers enormous freedom within the general guidelines imposed by the government.

The study of technical chures and the stringing ou seemingly endless negotia with Western trade repres tives are two of the ways in ries in Communist countries tract technical expertise from West without having to pay fr

Labor Shortage

Hungary has a chronic l shortage, and there is compet for machinists and every kin skilled worker, as well as professionals. In Hungary, like many Communist coun a worker may choose his job change it as often as he likes may also live where he pleas

Nearly all enterprises must special inducements to keep w ers loyal. At Mr. Gesa's, wor who stay 25 years can coun receiving gold rings or chains cording to sex, at ceremo strikingly reminiscent of re ment parties at U.S. compa Special incentives for loyal w ers have attracted growing ficial criticism, however, pa ularly since they have sometimes assumed rather bizarre forms

The Servicing Enterprise Hajdu-Bihar County has singled out by the press for cial comment. Evidently despe for a competitive edge in the market, it offered workers cially imposing tombstones long service. In a sarcastic cle in the Communist p newspaper Nepszabadsag, an ficial commentator voiced hope that proper gravity was served at meetings to de which workers were worthy that the setting was suitable funeral parlor illuminated the flickering flames of huge ch deliers, with owls hooting side."

Letters

World Ties

In your editorial (IHT, Nov. 12) you state: "But human greed and human pride, old hatreds and new fears, carry the UN—like so many other international associations—along lines that lead to conflict rather than collaboration . . . The world's difficulty lies not with its institutions but with a human condition that has not yet succeeded in making them work effectively, equitably or even with reasonable common sense."

What you state is certainly true. But what action do we take to change the situation? There is of course no quick solution but there is one type of activity that can help build the foundation for mutual understanding and respect that is required if nations are to live and collaborate together in constructive, peaceful programs. It is international educational and cultural relations.

While some carefully selected students, teachers and artists were sent abroad to study, to teach or to perform before 1945 (France was then the leader in this), it was only after World War II that these programs were given the financial support by private, governmental and international organizations which they needed to prove themselves. I do not allege this on my own experiences in this field, though I have been associated with such activities for some 40 years. A series of studies conducted by unbiased experts concluded that these programs, if numerous enough, could build a foundation for sound economic and political development and cooperative relations.

These programs, if well-financed and administered, could train the leaders in the world who could make the UN and other international organizations work. But the nations of the world still emphasize balances of power and armaments on the assumption that this is the only way we can keep the peace. As a result we spend $250 billion a year on arms.

I am not so naive as to think that there can be unilateral disarmament or that reduction of weapons can come soon and completely. But when are we going to begin to spend a fraction of what we spend on armaments to develop the leadership required to build a peaceful world? Our present course is folly itself and can only lead to disaster while the great masses of the peoples of the world live on a sub-standard, starvation level.

Rescuing the Pound

Since 1914, the British and Anglophiles in the United States have invented an interminable series of specious reasons why U.S. taxpayers should endlessly subsidize over-consumption by the improvident British. The Washington Post editorial (IHT, Nov. 15) tells me that we are being gulled for the umpteenth time.

The British are nearing the end of their creditors' patience and confidence, and there is no justification whatever for U.S. taxpayers to lend them another penny. Let me remind you that the unemployment rate in Britain is only 5.2 per cent, whereas it is 7.9 per cent in the United States. If Prime Minister Callaghan and Mr. Healey will simply cut their public spending until the British unemployment rate reaches 7.9 per cent, the exchange rate of the pound will steadily appreciate.

WILLIAM WISELEY.
Henley-on-Thames, England.

Alexander Calder

Let us remember not just Alexander Calder the complete citizen (John Russell, IHT, Nov. 12) but in particular the Calder who denounced and tried to put a stop to an atrocious war waged by America's political class against Asian peoples. Many opponents of the Vietnam war could be—or at any rate were—regarded as effete snobs; Calder never at all, for it was plain even to other Americans that he was precisely what an American ought to be. His life and works are an adumbration, quite logically, of the America that ought to be.

DAVID DORRANCE.
Montpellier, France.

Promises to Israel

Betty J. Miner (Letters, Nov. 6) was only partly correct in stating that both presidential candidates made their promises to Israel to "attract some Jewish votes." Those promises were made not only to attract some Jewish votes, but those of tens of millions of Americans who understand that a strong ally in the Near East, sufficiently supported militarily, economically and morally, will enable the United States to take the necessary steps to protect its own interests and those of its West European allies in case of another Arab oil boycott, or intensified imperialistic moves by the Soviet Union in the Middle East.

Dutch Bishops Defy Vatican On Celibacy

AMSTERDAM, Nov. 19 (AP).—Roman Catholic bishops in the Netherlands are defying the Vatican in a new clash over the church's requirement that its priests be celibate—a policy they have been trying to get abolished for more than a decade.

The latest dispute centers on 25 married priests teaching at Dutch theological colleges.

In a strongly worded letter sent on Oct. 23 to all seven Dutch bishops, including the new Primate, Johan Cardinal Willebrands, the Vatican called for the dismissal of the married priests and declared that the Netherlands is the only country where churchmen openly spurn the celibacy rule. The letter demanded urgent steps to protect what was called the worldwide unity of the church.

The Dutch hierarchy has so far refused to carry out these instructions. Sources say that Cardinal Willebrands and the Most Rev. Adriaan Simonis, bishop of Rotterdam, who are now in Rome on other business, will state their case in Vatican circles.

All but one of the seven Dutch bishops oppose the Vatican on the issue, the informants added.

The only dissenter is the Most Rev. Marcel Gijsen, bishop of Roermond, who is a traditionalist. He has declared his support for the Holy See's celibacy rule, which dates from AD 1073.

Threat to Colleges

The letter from Rome was signed by the heads of the Vatican's Education and Religious Doctrine Departments. It warned that if married priests were not dismissed, the colleges employing them would be declared unqualified for the task of teaching seminarians.

However, if all the priests were fired under Vatican pressure and they appealed to the civil courts, Dutch labor law could be invoked on grounds of wrongful dismissal and damages sought from the church.

In 1975, a priest ousted after he married was awarded 200,000 guilders (about $80,000) by a Dutch court. The Amsterdam Theological College had to pay the award.

The new clash with the Vatican is the first during the tenure of Cardinal Willebrands, who was installed as Primate last February.

The cardinal, 67, regarded as a moderate, is widely believed to have been appointed Primate by Pope Paul VI to restore order in the Dutch church. He has been head of the Vatican's Secretariat on Christian Unity for seven years, continuing to hold that post despite his elevation in the Dutch hierarchy.

Most Are Unwed

Most of the 140 priests working at this country's five theological colleges have remained unmarried. The 25 married priests are teaching at four of the institutes and no married priest has his own parish, a church spokesman said.

However, several are active in other fields, including youth work, the spokesman added.

Bernhard Cardinal Alfrink, Cardinal Willebrands's predecessor, pressed Rome for sweeping reforms, including the celibacy requirement's abolition, approval of the use of contraceptives by church members and a democratic system for filling church posts.

In 1970, the Dutch Pastoral Council—Roman Catholicism's first representative assembly in which priests, nuns and laymen voted jointly with bishops on policy matters—came out overwhelmingly in favor of ending the celibacy rule.

At least one Catholic congregation has defied the Vatican by allowing a married priest to say mass.

Jet Plunge Kills Belgian

PHILIPPEVILLE, Belgium, Nov. 19 (Reuters).—An elderly woman died today when a Belgian Air Force jet plunged out of control into a row of houses in this southern Belgian town.

Chiang Ching More 'Careerist' Than 'Radical'

Personal Clashes Pervade Politics in China

By Fox Butterfield

HONG KONG, Nov. 19 (NYT).—The flood of charges made against Chiang Ching, Mao Tse-tung's widow, and three other Politburo members since their arrest last month has provided analysts of Chinese affairs here with a rare glimpse into the inner political workings in Peking and has led to major reassessments of events in China over the last few years.

Some parts of the picture that is emerging had long been suspected by the analysts, but they lacked supporting evidence. Other parts are new.

While disputes over policy certainly played a role, politics in Peking seems to have been more dominated by bitter personal clashes than had been apparent. Miss Chiang and her three associates appear to have formed a surprisingly cohesive faction and to have been engaged in a constant series of battles with senior bureaucrats and army commanders, usually headed by Premier Chou En-lai who died in January.

Almost every issue from farm mechanization and factory management to movie production and militia organization, tended to become personal, it appears. In this aspect, Chinese politics remains much as it was in the time of imperial court intrigue.

'Opportunists'

Although the new information available here is obviously one-sided, the analysts believe it is broadly accurate enough to support the interpretation that much of the responsibility for the bitterness and disruption of recent years lay with Miss Chiang and her colleagues. In retrospect, the analysts think, they appear to have been less "radicals," as they were often termed, than simply "careerists and opportunists," as their victorious opponents are now branding them.

It is difficult to find any ideological reason for Miss Chiang's apparently intense opposition to the Tachai Brigade, the model farm unit, or the reported effort by Wang Hung-wen, a member of her group, to create suspicion in Mao's mind about Chou.

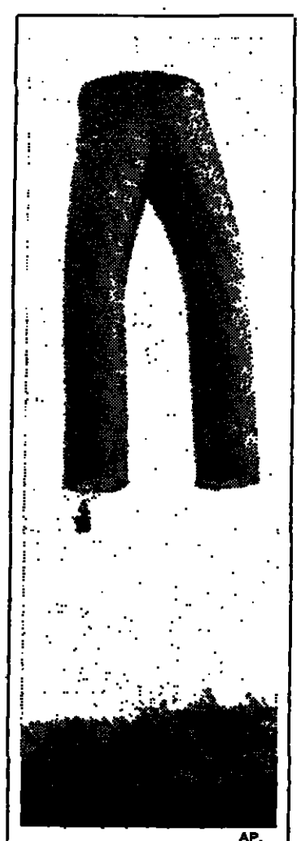
"What we are discovering is that they were enormously selfish and disruptive," a diplomat with long experience in Peking remarked recently.

Another of the analysts' conclusions is that the man who is emerging as the real folk hero of China is Chou, who is repeatedly referred to as "the respected and beloved premier." In the fresh material, Chou is depicted as having been under constant attack by Miss Chiang's group—from 1974, when it tried to turn the campaign against the late defense minister, Lin Piao, and against Confucius into an assault on the premier, to this year, when the group made a movie indirectly showing how to overthrow him.

Chou's Virtues

With his intelligence, culture, kindness and command of tactics, Chou embodied all the virtues the Chinese admire. With his attempt to guide the country along an orderly course of economic growth, he stood for what most people seem to have wanted.

Mao continued to play a key role in affairs, the analysts now believe, but it appears that in the last years of his life he was either too ill or too senile to function more than intermittently. Diplomats who had been reticent to talk about their meetings with him report that in the last couple of years he had great trouble speaking and sometimes did not seem to follow the conversation.



The critical matter, then, was who had had access to the chairman in the moments when he was alert. For a period it was Chou; then for a time last winter it was Miss Chiang; last it was Hua Kuo-feng, now Mao's successor as Chairman of the Communist party. In one of their last meetings, it is said, Mao wrote, "With you in charge, I am at ease," which seems to be one of the main bases of Mr. Hua's claim to legitimacy as leader.

Mr. Hua, by coincidence or design, is emerging in the Chinese press as a man remarkably like Chou. A description of him last week in the army newspaper, Chiehfang Chun Pao, as "loyal, selfless, open and straightforward, modest and prudent," was almost word for word the eulogy of Chou read by Teng Hsiao-ping, since ousted as deputy premier.

New information on Mr. Hua's background indicates that in 1971, when he was called to Peking from Hunan Province, he worked directly for Chou as director of the General Office of the State Council, which Chou headed. This suggests that the premier may have been instrumental in Mr. Hua's spectacular rise to prominence and that part of the reason, at least, that he was acceptable to other leaders was that he embodied Chou's qualities.

Another element that the analysts put forward is that the army commanders, many of whom were purged or at least criticized by Miss Chiang during the Cultural Revolution, seem to have played a pivotal role in her sudden arrest on Oct. 6, along with her associates.

In view of the charges against them, one reason the army leaders may have acted was that the four allegedly tried for several years to use the militia to seize control of the army. The analysts had long surmised that Miss Chiang and her associates were trying to do this.

IT'S A GAS—Levis balloon, with 120-foot inseam, in flight near Bristol, England, this week.

Brazil President Cuts Spending Plans for 1977

BRASILIA, Nov. 19 (Reuters).—President Ernesto Geisel today cut 44 billion cruzeiros (about $4 billion) from the 110 billion cruzeiros earmarked for a national development plan in 1977, in an effort to slow down inflation. It was the first of tough economic measures expected after this week's municipal elections.

As further results came in, the country's only legal opposition party, the Brazilian Democratic Movement (MDB) continued to make sweeping gains in the main cities. The ruling National Renewal Alliance did well in rural areas and was leading the MDB by nearly a million votes on the ballots counted so far.

The MDB's victories were less than those it gained in national elections two years ago and it appeared that President Geisel had won the majority support he said he needed to maintain his policy of gradually liberalizing the authoritarian military regime.

Condemned Man Sent Back to Utah Prison

SALT LAKE CITY, Nov. 19 (AP).—Gary Gilmore, the 35-year-old convicted murderer who says he prefers death to prison, was cheered by fellow inmates yesterday as he returned under police escort to Utah State Prison from a hospital. He was found unconscious in his cell on Tuesday from an overdose of sleeping pills. He will be kept in the prison infirmary.

His girl friend, Nicole Barrett, 20, emerged from a coma yesterday for the first time since she was hospitalized in Provo after taking sleeping pills in her apartment Tuesday. Hospital officials said she was recovering but would require treatment for several more days.

U.K. Confirms Man Has Monkey Disease

LONDON, Nov. 19 (UPI).—The Health Ministry said today that an illness that has infected germ-warfare scientist Geoffrey Platt has been confirmed as the deadly "green monkey" disease from Africa.

Six doctors and 20 nurses involved in treating Mr. Platt at a North London quarantine hospital have gone into voluntary isolation, officials said, as have 38 of his contacts, including his wife and two children.

Tehran to Get $640-Million Missile System

Iran and U.K. Agree to Oil-for-Arms Barter

TEHRAN, Nov. 19 (UPI).—Iran has completed its first oil-for-arms barter—a deal with the British Aircraft Corp. for a $640-million tracked Rapier ground-to-air missile system.

A BAC announcement said the contract between Iran and Britain was signed yesterday in Tehran.

It was the only Iranian proposal to trade oil for arms to be completed so far. Iran has entered into negotiations with U.S. oil companies and defense contractors in an attempt to fashion three-sided deals for F-16 and F-18 U.S. warplanes and other military equipment. But some U.S. reluctance and Iran's recently improved oil sales have slowed the talks.

During 8 Years

The BAC announcements said Iranian crude oil, equal in cost to the purchase price of the missile system, will be supplied during eight years. Informed sources said the oil deliveries would start early next year at the rate of 13,000 barrels daily. The oil would be delivered to the Royal Dutch Shell Oil Co. for sale outside the United Kingdom, thus creating badly needed foreign-exchange credits.

An informed source said Royal Shell will collect a commission for handling the transaction, but exactly how much was not disclosed.

Iran will get the tracked version of the Rapier missile system and supply facilities to be manufactured and assembled as much as possible in Iran by a joint venture company formed between BAC and Iranian Electronics Industries, a state-controlled military electronics organization located at Shiraz.

The deal involves two contracts, one between Iran and BAC for the missile system and another between BAC and National Iranian Oil Co. for the oil sales.

U.S. Is Weighing Changes in Rules On Arab Boycott

WASHINGTON, Nov. 19 (WP).—The Commerce Department yesterday proposed what it agreed were "semantic" changes in its Arab boycott reporting regulations in an effort to eliminate the considerable confusion and even anger generated by them. If the changes are made final, firms will no longer be asked to state whether they have "complied" with Arab boycott requests. They will indicate whether they have "taken the action, furnished the information, or signed the agreement requested."

Moreover, businesses will be able to attach explanatory statements to their official forms. The explanations will be available to the public along with the forms.

Finally, the department proposes that requests for affirmative statements of origin—"These goods were produced in the United States"—need not be reported unless there is evidence they are boycott-related.

Asked what would constitute evidence that a statement was boycott-related, Commerce Department general counsel J.T. Smith gave the following example: If a U.S. company received a request for a negative statement of origin—"These goods were not made in Israel"—and cabled back saying only an affirmative statement would be acceptable, the latter would be boycott-related.

Tito-Soviet Talks Said to Lead to More Democracy

BELGRADE, Nov. 19 (UPI).—A leading Belgrade newspaper today said Moscow's renewed recognition of Yugoslavia's nonalignment and independence will inject more democracy into the Communist movement.

The newspaper Politika commented on a joint communiqué published Wednesday at the end of three days of talks in Belgrade between Soviet Communist party leader Leonid Brezhnev and Yugoslav President Tito.

In the document, Mr Brezhnev pledged the Soviet Union's respect of Yugoslavia's independence and sovereignty, acknowledging the freedom of this Balkan nation to take its own unique Communist path, different from the one the Kremlin pursues.

Politika said the two leaders agreed that "differences and some open questions do not represent an obstacle to further widening of cooperation, but actually represent an impetus and challenge to solve them through open talks and constructive dialogue."

New Fraud Laid To Mrs. Peron

BUENOS AIRES, Nov. 19 (Reuters).—Former Argentine President Isabel Peron, in preventive detention for alleged misappropriation of $500,000, has been charged with embezzling $42,000 more, according to a court statement.

The statement said the latest charges involved a check donated by a state bank to a charity fund that Mrs. Peron is alleged to have deposited in her own account in December, 1973.

Last month, federal judge Nino Garcia Moritan ordered the 45-year-old former president and three of her top aides held in connection with charges of embezzling $500,000. Mrs. Peron was cleared by an appeals court earlier this month of charges of embezzling $800,000.

No Talks Till Jan. 20, Carter Tells Andreotti

ROME, Nov. 19 (UPI).—President-elect Jimmy Carter has written Italian Premier Giulio Andreotti that he will not be able to meet him next month, but would be glad to see him after his inauguration, the Italian government said today.

The government announced yesterday that Mr. Andreotti would visit Washington Dec. 6-7 at the invitation of President Ford and there had been rumors that he would also meet Mr. Carter to discuss Italy's economic problems and the Communist party's strong pressure for a share of power.

China A-Cloud Nearing the U.S.

WASHINGTON, Nov. 19 (AP).—An air mass containing radioactive debris from a Chinese nuclear explosion is expected to begin drifting across the United States tomorrow, the Environmental Protection Agency said.

Radioactive particles are expected to fall to the earth as the air mass, estimated to cover about 160,000 square miles, moves eastward across the nation. It is not possible to predict the amount of ground-level radiation that might occur, the EPA said.

The radioactive air mass was created by China's four-megaton explosion Wednesday, China's largest nuclear blast. A Chinese test in September that produced significant levels of radioactivity in the United States, particularly in the East, was 20 times smaller than the one set off Wednesday.

Russian Republic Gets 5-Year Plan

MOSCOW, Nov. 19 (UPI).—The Supreme Soviet of the Russian Federation today adopted the five-year economic development plan for 1976-1980.

The legislative body of the federation, the largest of the Soviet Union's republics, approved plan targets calling for a 32.8-per-cent increase in income, a 36-per-cent increase in industrial output and a 23-per-cent rise in real per-capita income.

The plan also called for a 16-per-cent increase in average annual output of farm produce and for construction of 311 million square meters of housing in the five years.

A Fiber Diet Is Discounted As Heart Aid

Study Finds No Cut In Cholesterol Levels

By Jane E. Brody

MIAMI BEACH, Nov. 19 (NYT)—A carefully designed study has found no evidence to support the popular contention that a high-fiber diet can prevent heart disease.

This notion has been widely publicized recently in books and articles in newspapers and magazines. Based largely on observations of certain African peoples, the suggestion was made that eating large amounts of fibrous foods each day would reduce the levels of cholesterol in the blood and, in turn, prevent hardening of the arteries and death from heart disease.

A number of studies in which fiber was added to regular diets have produced conflicting reports about the effects of fiber on cholesterol levels. Typical fibrous foods include whole grains, vegetables and fruits.

To clarify the issue, Dr. Thomas Raymond and co-workers at the University of Oregon Health Sciences Center placed 12 adult volunteers in a hospital ward for eight weeks and restricted them to special diets.

In all the diets, calorie intake was controlled so that the participants neither gained nor lost weight.

Different Diets

Six of the volunteers were given a liquid diet containing very little cholesterol—less than 100 milligrams a day, or one-seventh the amount consumed by the average American. After four weeks, fiber was added in the form of nine high-fiber muffins each day, with the amount of liquid calories reduced proportionately.

The muffins provided a total of 16 grams of crude fiber a day, or three to five times more than the typical American consumes.

Six other volunteers consumed a liquid diet containing 1,000 milligrams of cholesterol each day, and after four weeks they, too, were given the high-fiber muffins. The high-fiber diets were consumed for four weeks by each group.

Dr. Raymond told a scientific meeting of the American Heart Association here Wednesday that addition of fiber to the diets had produced no change in cholesterol levels. Those on the high-cholesterol diet had high levels of cholesterol in their blood, and this was unchanged by the fibrous muffins. The diet with very low cholesterol lowered the blood levels of this substance, but the addition of fiber produced no further lowering.

U.S.-Soviet Fish Talks

WASHINGTON, Nov. 19 (AP).—The United States and the Soviet Union opened talks this week on a new fisheries agreement that will take into account the U.S. intention to establish a 200-mile fishing limit March 1.

INTERNATIONAL EXECUTIVE OPPORTUNITIES

Worldwide Swiss Company
is seeking a

Graduated Engineer
in Mechanics or Electricity
for its Agency in MOSCOW

We offer:
- An interesting job in technical Administration and Sales Promotion;
- Possibility to make career in an international company;
- Free flat and free car;
- Home leave.

Required are:
- Engineering background;
- Commercial/management experience;
- Fluency in English, Russian, would be an asset;
- Age: 25-35; single or married without children.

If you are interested in this challenging position, please send your resumé to:

Box D 5,565, Herald Tribune, Paris.

Construction Superintendents

An International Offshore Company requires personnel to coordinate pipelaying and construction operations.

The successful applicant will have experience in offshore construction involving deepwater pipelaying. Responsibilities will include monitoring, contract performance in areas of productivity, quality control, contract compliance, safety, cost control and similar functions.

Attractive salary and benefit package in relation to qualifications.

Europe-based with travel offshore as required.

Please forward a resumé of your background to: Box D-5,570, Herald Tribune, Paris.

DIRECTIONAL DRILLING SUPERVISORS

EASTMAN WHIPSTOCK needs experienced Directional Drillers for assignments in Europe, Africa and Middle East. We are also looking for Drillers/Tool Pushers with offshore experience to train as Directional Drillers. Package includes annual leave or rotation, schooling, medical, housing and/or living allowance, pension, profit sharing, guaranteed monthly bonus.
Send details of experience, age, family status and references in confidence to:

Larry Holt, Vice President
Eastman Whipstock (UK) Ltd.
389 St. Margaret's Rd. Twickenham TW1 1PP, England.

Effectiveness is what you're looking for.
In a top executive.
In the advertising medium that will help you find him.

And effectiveness is what you'll get in the International Herald Tribune. Because it's read by senior management throughout Europe.

73% of our readers are executives, including 41% at a senior level. 33% serve on at least one board of directors.

MANUFACTURER'S REPRESENTATIVE

Illinois based manufacturer of electrical contact tape material, contact assemblies and custom switches, seeks representation in U.K., Scandinavia and Common Market countries.

Please contact:
T. R. BOEDEKER
at the Munich Hilton Hotel between November 24 & 29, or at U.S. Exhibition Pavilion 16, Electronica 76.

TRICON INDUSTRIES, INC.
2325 Wisconsin Avenue,
Downers Grove,
Illinois 60515, U.S.A.

EXECUTIVES AVAILABLE

INTERNATIONAL MANAGER

Swiss American, 44, multilingual, outstanding record of achievement in accounting, finance and general management, currently in Switzerland as Managing Director U.S. manufacturing company's subsidiary operating EEC, faced with gradual retreat of group from Europe, seeks challenging activity with multinational group out of Europe.

Write: Box D 5,564, Herald Tribune, Paris.

ACCOUNTING/AUDITING
Single German, 31, equivalent MBA (Diplom Kaufmann), 2 years experience Assistant with CPA (West Germany), 1 1/2 years Audit Manager of an international company (West Africa), Anglo-Saxon accounting, fluent in English, willing to travel. Seeks new position with a U.S. company in the United States of America, Europe or the Far East.
Box D 5,567, Herald Tribune, Paris.

The "International Executive Opportunities" TUESDAY, THURSDAY & SATURDAY

To place an advertisement, contact our office in your country (listed in classified advertisements on back page) or Mr. Ferrero, 21 Rue de Berri, 75380 Paris Cedex 08. Tel.: 225-28-90 Telex: 280509.

LONDON THEATER

Cheers for a Foolproof Comedy Thriller

By John Walker

LONDON (IHT).—Arnold Ridley's "The Ghost Train," revived with great and enjoyable panache at the Old Vic, is one of those plays that, over the many years since its first performance, has become a mainstay of amateur theatrical and provincial repertory companies for the simple reason that it is almost foolproof.

It is described in the program as a drama, which it may once have been, but it is now a comedy thriller. And, in the hands of a company as professional as those now playing it, it is both very comic and also thrilling in its creakingly melodramatic way.

There are apparent ghosts—indeed a ghostly train with its phantom drivers and passengers—villains unmasked at the last moment, unlikely heroes and the rest of the paraphernalia of popular theater of 1925, when the play was first produced.

Under Bill Hays's deft direction, the cast this time around parodies the acting styles of an earlier generation—the men keep their upper lips stiff and strike manly poses, the women quiver helplessly, in need of care and protection. This element of camp is an added delight, with the cast keeping admirably straight faces as they utter the clipped, cliché-ridden dialogue.

The plot itself, for all its absurdities, does generate a genuine tension. Mr. Ridley strands half-a-dozen passengers in a tiny, run-down railroad station that has the reputation of being haunted by the ghosts of a train and passengers killed in a crash 20 years before. It is, of course, the anniversary of the disaster. Outside, the thunder crashes and the lightning flashes. Inside, the stationmaster tells his captive audience the blood-curdling story of the hauntings and, as the passengers begin to jump at the slightest sound, a mad woman enters and, far away, is heard the whistle of the ghost train.

Michael Annals has designed a wonderfully run-down station and there are some splendid special effects when the train rumbles through. It is a pity in a production so slick that there should be so much trouble with the doors—as a ghost battered at a locked door, it unexpectedly opened and he had to pull it shut again before continuing to bash at it; and the mystery of another door unexpectedly opening was solved by the sight of a retreating stagehand.

But there is some good, ripe acting from most of the cast. James Villiers's big businessman is splendidly overbearing and boneheaded, Louise Purnell has a mad scene that would be the envy of any Ophelia. Geoffrey Davies is a debonair silly ass, and Judy Buxton giggles and squeals delightfully.

It is great fun, ideal entertainment for a family Christmas outing. Mr. Ridley himself, now 80 and better known as a still active actor, was rightly cheered by the first-night audience.

* * *

The first foreign company to visit the National Theatre is France's Théâtre National Populaire, which has opened with Roger Planchon's audacious and challenging production of Molière's "Tartuffe" and, from Tuesday, follows with Marivaux's "La Dispute."

I'm not sure whether Molière's comedy of social hypocrisy can quite bear the theological weight of Mr. Planchon's production, which is framed by figures of a trumpeting angel and a suffering Christ. The frail humanity of the characters is dwarfed by the sets they inhabit—huge rooms that at first seem to be derelict and crumbling but turn out to be in the process of being built, a manifestation of Orgon's thrusting egotism.

But the production has a vivid social reality, a sense of lives being lived, of people suffering genuine pain and alteration. Molière's text is treated with great seriousness that, while it does not exclude some sharp satire, reverses the comedy, turning it into near-tragedy. Elmire's unmasking of Tartuffe, by allowing him to seduce her while her husband eavesdrops, becomes not a high-spirited game but scene of near-rape and terror.

The sense of horror increases until the final scenes of Tartuffe's apparent triumph and his downfall explode with violence and brutality. It is startling and stunning theater.

ENTERTAINMENT IN NEW YORK

NEW YORK, Nov. 19 (IHT).—This is how critics for The New York Times rate new films:

"Beware of the Holy Whore," a film by young German director Rainer Werner Fassbinder, "has the informal manner of a practice exercise but it leaves the kind of wounds one receives in a knife fight," Vincent Canby says. It's about a movie company that's gathered in Spain to make a film. Eddie Constantine plays himself while Fassbinder plays the production manager. "It's not really about movie-making, it's about connections and disconnections." Canby admires Fassbinder's work and calls his world "very special. His images do not reflect reality so much as psychological stress."

The movie is impossible to enjoy in the sense of a conventional narrative film." Some of its details are "uproariously funny but the overall tone is of despair."

"The Last Tycoon," written by Harold Pinter, from F. Scott Fitzgerald's novel, and directed by Elia Kazan, "is muted and thoughtful, sad but unsentimental," according to Vincent Canby. Robert De Niro plays, "with restraint and passion," Monroe Stahr, one of the last great Hollywood studio bosses of the golden '30s. He eventually destroyed by the advent of Wall Street financing and the unions. Also starring are Robert Mitchum and Jack Nicholson; both are "extremely effective."

MUSIC IN PARIS

Rostropovich, Shostakovich

By David Stevens

PARIS, Nov. 19 (IHT).—Mstislav Rostropovich laid down his cello and picked up his baton last night to begin a series of concerts with the Orchestre de Paris, using the occasion before a packed house at the Palais des Congrès to give the place of honor to one of Shostakovich's grandest yet relatively little-known creations, the Eighth Symphony.

This hourlong, five-movement work, which occupied the entire second half of the all-Russian program, is one of the composer's "war" symphonies. It came a couple of years after the Seventh (Leningrad) Symphony, whose bellicose histrionics won official approval and a voguish popularity elsewhere, and a couple of years before the short and ironically humorous Ninth (when everyone had been expecting a big victory symphony). Both the Eighth and Ninth were included in the withering blast of 1948 from Stalin's cultural head-thumpers, which slowed down the composer's output of major works for a while.

The war can be seen most obviously in the Eighth in some great outbursts of brass and percussion, but they pass quickly, and the real character of this symphony is set by the long Adagio opening movement, comprising almost half of the work, the tragic Largo fourth movement and the tranquil, conciliatory conclusion of the final movement. The war here is far from over but the light can be seen at the end of the tunnel.

It is also one of Shostakovich's finest achievements as a symphonist, and Rostropovich gave a beautifully shaped and deeply felt reading, caring for and getting virtuoso performances from every section of the orchestra.

Before the intermission the spotlight went on the conductor's wife, Galina Vishnevskaya, who sang Prokofiev's "Ugly Duckling" and two lyric scenes from Rimsky-Korsakov's "The Czar's Bride" and Shostakovich's "Katerina Ismailova." The soprano is decidedly a woman of the theater, and she threw herself into these works with a complete battery of dramatic gestures, as well as an uneven vocal production that ranged from some thrilling sounds to some hollow and precarious ones.

STERDAM

merican Tackles the Rijksmuseum

By Jules B. Farber

TERDAM (IHT).—It took French king, Louis Bona- in 1808 to initiate a royal llery in Amsterdam that evolve into the renowned useum (State Museum) e world's most comprehen- llection of Dutch paintings the 16th through the 19th es. It took U.S. expatriate olarian Gary Schwartz to the first complete, illus- Rijksmuseum catalogue is the intervening 168 years. Rijksmuseum produced a catalogue nearly half a ago, but it was far from e and sparsely illustrated. ingly, few major museums, e London's National Gal- ose collection is less than ig as the Rijksmuseum's, complete collection sur- ey generally produce list- d catalogues covering par- departments.

Schwartz, born in Brook- 1940, is an art-history te of New York University ohns Hopkins. He arrived in the Netherlands with a ship to complete his PhD ation. In 1974 he became a citizen. He started editing translating scholarly art including Prof. Horst Ger- definitive work on Rem- . He later wrote, produced published the Rembrandt catalogue.

Mr. Schwartz recalls, "I de- in 1972 to become a one- niversity press and the big- sh of them all—the cata- of all the paintings of the useum — was out there g to be hooked." Pieter van director of paintings, had ted 31 bulging volumes of ut negotiations between the Government Printing Office and the museum had stalled over the high price of the book and its potential sales.

"Their dummies were very modest and the price indeed prohibitive to reach a wide public. Without one book to my name, I approached Van Thiel and asked for the chance to do it cheaper and better than the government. He gave me little hope. In fact, it took me from spring, 1972, to spring, 1974, until the contract was signed.

"I only realized later that I was too enthusiastic, undoubtedly very naive. My original price was much too low mainly because I couldn't gauge the work that still had to go into the book. The public price became 175 guilders ($70)—but we are still 100 guilders under the official quote given five years ago for a much less imposing product. The book I made is a giant. It gives you the feelings of riches when you get it in your hands."

Of the total of 5,160 works, there are 4,450 paintings, 333 miniatures, 110 pastels, 145 watercolors and drawings, and 30 heraldic objects from the painting department.

The catalogue, which is being produced without subsidy, has a print run of 13,000, of which 10,000 were ordered jointly by the Rijksmuseum; De Haan, a Dutch publisher selling to bookshops and Olivetti, which took several thousand for VIP gifts.

"Even now, with the advance bulk orders, I've only sold a total of 10,600 and am still a long way from the break-even point," Mr. Schwartz said. "I have to sell another thousand copies to be in the clear. Then, with the last 1,400 copies, I will start to recoup what I put into the project in overhead, costs and four years' work."

His man hours during those four years are incalculable. He translated the 31 volumes of Dutch text into English to reach a world market, edited copy and honed descriptions, researched and checked his own work to assure scholarly authority and discussed with design and layout artists the sizing of over 5,100 photos.

Fakes Listed, Too

In his catalogue, the Rijksmuseum lists everything it has—good, bad, indifferent or fake. For instance, a "Vermeer" by master forger Van Meegeren is catalogued. Besides the museum's 21 authenticated Rembrandts, the collection includes one as "from the studio of . . .", two "from the school of . . ," one "milieux of . . ." three "copies after. . ." and two "imitations of. . ."

Mr. Schwartz said: "The catalogue's form is unusual in that we worked with a three-column editorial grid, giving every work pictured basically the same space and treatment. The real Rembrandts get equal billing with the Van Meegeren fakes—a democratic presentation."

The catalogue should serve as a definitive document for art historians, while having popular appeal.

"It's admirable that the Rijksmuseum gives honest attributions to everything they own, not worrying about offending people who made loans or leaving themselves open to criticism," Mr. Schwartz said. "They are absolutely straight in labeling and constantly revise attributions based on their own scholarly research and integrity. They're so much more scrupulous than the American museums, which knowingly omit or cover up their purchase mistakes and out-and-out fakes."

The one-man university press (he worked for a time with a full-time assistant, a part-time assistant and his Dutch wife) is relieved that the first copy of this mammoth book, with over 900 pages, has just been presented to the Dutch minister of cultural affairs. It means for Mr. Schwartz that this chapter is closed.

When he showed the dummy at the recent Frankfurt International Book Fair, a visitor asked if the museum catalogue was being supported by the state. Upon discovering that this was strictly a Schwartz production, she commented: "It's no coincidence that an American took this job on. Only an American would be crazy enough to risk his neck on a project that even the Dutch Dutch government wrote off as a bad investment."

Gary Schwartz who has just finished work on The Book—a catalogue of the entire Rijksmuseum collection.

Jules B. Farber.

LONDON: Pompeii and Degas, Two Kinds of History

y Max Wykes-Joyce

DON, Nov. 19 (IHT).—On g. 24, 79, Vesuvius erupted, ering Pompeii, a Roman f some 20,000, and burying arby town of Herculaneum canic mud, preserving the and the people for centuries he.

e than 300 items from the laces have been brought to n for a show at the Royal my of Arts, Burlington Piccadilly, London W1. g tomorrow and continu- rough Feb. 28. Most of the come from the Naples m.

Bronzes from the Garden of the Popidii, Pompeii, at Royal Academy, London.

city council without further fee, although only 6 years of age." Numerius senior was in truth a former slave giving junior a head start in local politics.

Indoors, the pleasures of the table occupied much Pompeiian time. The affluent ate with silver spoons from silver dishes. Fish were kept live in a basin—a mosaic from the bottom of such a basin portrays the sea food still to be caught in the Bay of Naples. The marble tables were supported by carved heads of such Dionysians as Silenus. The rich in their gardens had fine bronze fountain sculptures and carved statuary; the less affluent a terra-cotta toad by the patio pool. In the garden, in the summer, then as now, barbecues took place. A wall painting shows such a banquet. Another painting in four parts shows tavern life and has the additional interest of displaying comments in colloquial Latin: Two men play some sort of table game involving dice; first man, "I'm out!" Second man, "No you're not. That's a two, not a three!" Another scene: landlord to two quarrelsome drunks, "If you're going to fight, get outside!" A sauna features in an inscriptive tablet; and a brothel is represented by a marble Venus preparing to bathe, her jewelry and lingerie represented in gold paint.

* * *

Bathing women form one of the three main themes—the others are dancers and horses in movement—of an exhibition of all the sculptures of Degas, with which the Lefevre Gallery (30 Bruton St., London, W1) celebrates its 50th anniversary (running until Dec. 21).

This particular suite of 73 bronzes has an extraordinary history. When Degas died in 1917, the wax and clay models from which these bronzes were cast lay scattered in disorder in his studio. They had been modeled, with the exception of "The Little 14-Year-Old Dancer," purely for his own information. Anyone who has tried to sketch a moving person or a moving horse will know the difficulties. Having a series of models in many attitudes and poses enabled Degas to make his compositions more accurate in accordance with his dictum: "It is essential to do the same subject over again, 10 times, a hundred times. Nothing in art must seem to be by chance, not even movement."

Degas's heirs permitted the famous bronze founder Adrien Hébrard to cast 22 sets of such models as were sufficiently sound to be used. Of these, 20 were for sale and the other two were for the heirs. The Italian director of the foundry, Palazzolo, had meanwhile invented a process, used in the casting of the Degas pieces, whereby the original waxes were not lost. And Hébrard, to satisfy himself that they were perfect, made a 23d suite of master casts, again as a reference "library" for himself and with no thought of selling them. This set had gone unnoticed and uncatalogued in Hébrard's cellar for more than 50 years. It is this set which is now displayed to delight and move us, a far cry from the first appearance of the little dancer, described by a French critic as one with "a face on which all the vices have imprinted their loathsome promises."

Around the Art Shows in Rome, Paris, Brussels

Rome

n, French Academy, 1 ità dei Monti, Rome, gh January, 1977.

very young painter, Derain, with Matisse and Vlaminck, the public with his ictures. Later he shocked ow artists by dropping out avant-garde altogether. agan a lonely search for nal values and went a daring road of his own. ok him to sites in Italy the admired Ponssin and themselves had worked. he green and ochre land- under blue open skies of s Italian period came the mooth nudes outlined in weeps, then the sober tory portraits and the cool till lifes, muted and as if out of space. In these, s that, as Derain himself eion, "it was not a matter oducing the object but of tie in the ancient sense word."

um full of canvases from ive period are the most nt and joyful element of ibition. Then the complex s of sea ports, parks and rds were rendered in and attacks of persimmon, on, apple green and ul- me over vividly contrasting s. The quieter "Arcadian" pes which followed are med down, in more solid and built of intriguing nd balances of perspective. these the "Bagpipe Play- "View of Martigues" are rical. Then after some of ian landscapes and several nudes, portraits and the assed still lifes follow a f interesting drawings and s at sculpture. Toward l of his life, Derain (1880- ainted somber oils with skill but little impact, a certain kinship with rico, who also changed n and went against the stream in mid-career. "Derain tried to keep the profound order of painting without artificially disassociating the aesthetic vision from the ordinary vision," writes Jean Leymarie, the new director of the French Academy here, in the catalogue. And Breton already stated in 1924 that "provocation is excluded from his work."

In other words, do they not both mean he is academic? Despite this, several moderns took him as a great example, saw and admired a special quality in his work, most of all Balthus and Giacometti. The latter said of Derain " . . . He wished nothing so much . . . as to stabilize the appearance of things, that marvelous appearance attractive and unknown . . ."

To most, Derain remained an enigmatic presence quite still in the turbulence of the modern art movement of the first half of this century. The cool measured approach of his maturity was never easy to take to or to assess. This uneven collection is dispersed through the already awkward hall-like corridors of the Renaissance villa. One is left wondering if it is the fault of the presentation or of the painter himself that makes it appear that his intelligence, his very proficiency in art history, his own eclecticism had been his undoing.

* * *

Santomaso, Editalia, 525 Via del Corso, Rome, through November.

Jagged shapes like panes converge toward central voids like sky or sea. The flat elements dispersed or jutting over airbrushed grounds are anchored here and there by a meandering thread of line. Though their blue-black and silver color evoke the weather and moods of the lagoon, and these abstractions bear witness to a certain sensibility, there is a brittle, still quality in the latest work of this veteran Venetian painter.

—EDITH SCHLOSS.

Paris

Henri Michaux, Le Point Cardinal, 3 Rue Jacob, Paris 6, to Dec. 31.

There have been many opportunities over the past few years to praise the work of Henri Michaux, whose present show includes recent oil paintings, watercolors and india-ink drawings. One thoughtful person once compared Michaux to Michelangelo. Such a comparison might seem pointless hyperbole until one reflects on the abstract tension of Michaux's drawings, which suggest a Walpurgis Night or a Last Judgment. He achieves this through a highly abstract medium—through blobs of ink that suggest an organic and psychic urgency without ever being nudged or contrived into any definite resemblance. This tenuous yet persuasive junction between form and emotion confronts the viewer with a language of pure rhythm and stress, devoid of any anecdotal element, of any narrative elaboration "after the fact." There is, consequently, a mystic quality to Michaux's work—in the best sense of the word—a reaching out beyond words to the emotional root of being, and not, as the word is sometimes made to imply, a withdrawal into a comfortable fog of indeterminacy. At 77, Michaux is producing works that are, if anything, of a greater density than those he did two years ago.

* * *

Claudio Bravo, Galerie Claude Bernard, 7 Rue des Beaux-Arts, Paris 6, to Dec. 18.

Claudio Bravo, 40, was born in Chile, and lives in Morocco "because art is nonexistent there." He paints portraits, landscapes and indoor scenes with the virtuosity of the 17th-century Spanish masters he admires. Light, color and a certain sensuous and luxurious serenity are the realities that Bravo strives to render through a craft of astonishing refinement and ease. The show includes oil paintings and drawings—most of them persuasive, but with an occasional fall, especially in portraiture, into a rather banal "realism."

—MICHAEL GIBSON.

Brussels

Brussels and Countryside in the 17th Century, Musée d'Art Ancien, Brussels, to Dec. 5.

This exhibition of Brabant landscapes features meticulous paintings of the city of Brussels and romantic views of surrounding countryside as it was in the 17th century. It is still astonishing how much of the 17th-century town lingers on in the 20th-century city; the churches, the cathedral, the Abbey de la Cambre, old streets, small lakes once part of a woodland, now set in tailored parks or surrounded by busy streets. A carnival scene by Pieter Brueghel the Younger of Flemish villagers picknicking and dancing in the streets, bearing a saint's effigy in procession, could be redrawn in detail in modern dress today.

A painting by Van Schoor of the Nassau family palace in the heart of today's Arts Quarter of Brussels shows a riot of towers, domes, *pigeonniers*, elegantly laid out formal gardens, a typically 17th-century street flanking the walls. It also shows the Nassau Chapel, only relic still standing of the pretty fantasy built by the Orange-Nassau dynasty, burned down by Spanish soldiery.

* * *

Ixelles Hospital Art Show, Ixelles Hospital, 63 Rue Jean Paquot, Brussels, to Nov. 27. Sculptures by Martin Guyaux, engravings by Roger Dewint.

An initiative to humanize hospitals has been launched by a group of doctors and professional hospital workers. As a first endeavor, the main corridor of Ixelles Hospital has been turned into an art gallery. Spotlights stand from the ceiling, sculptures stand in the center aisle, the walls are hung with engravings. Martin Guyaux's sculptures are in welded metal, poignant scenes of figures trapped in enveloping cold matter, hands flung outward in supplication, bodies struggling to free themselves. Small, surreal works have half-open doors on either side of a metal column; a screen in the form of a door carries tiny Gothic-style carvings of scenes on each separate panel. A large work shows figures standing among the debris of a city. Roger Dewint's prints of grimacing faces in abstract landscapes are harshly drawn but warmly colored. Among the best is a welder at work, with its fast impression of a body in action subduing hot metal with flame.

No concession has been made in this pilot hospital art show to patients' possible need for reassurance and good cheer. A gentle landscape or two might be more therapeutic.

* * *

Tal-Coat, Galerie de France et Bénélux, 137 Av. Louise, Brussels, to Dec. 4.

In these recent paintings, Tal-Coat at 71 seems to have reduced the content of his compositions to hints of movement, obtained by painting over an alien substance added to the canvas furrowed areas, a brush sweep here and there, like an unfinished contour map of a very limited area. Color is all important and all over, an undercoat of white used everywhere to give luminosity to the blacks, browns, a sky-blue, deep red. There is no sign of his earlier figurative work seen at the Grand Palais retrospective in Paris.

—EONA DOBSON.

ON THE ARTS AGENDA

A special ballet program on the occasion of the national holiday of Monaco will include the first performance of a new work, "Le Pêcheur et son Ame," with choreography by Alex Ursuliak to music by Scriabin (Symphony No. 3), with Tetsutaro Shimizu and Yoko Morishita of the Matsuyama Ballet of Tokyo and Egon Madsen of the Stuttgart Ballet as the principal dancers, and with costumes designed by the Japanese couturière Kanae Mori. The program, which will have a public performance Nov. 20 at the Monte Carlo Opera, also includes ballets and excerpts by Balanchine, Béjart, Cranko and from the classical repertory, with Marcia Haydée, Ghislaine Thesmar, Merle Park, Richard Cragun, Michael Denard and Helgi Tomasson among the soloists.

* * *

Two major exhibitions scheduled by the Grand Palais in Paris are devoted to the work of the Japanese artist Keisuke Serizawa (born 1895), opening Nov. 24, which will cover the range of his output from artisanal and decorative to the more formal, and Puvis de Chavannes (1824-1898), opening Nov. 27, organized by the French National Museums and the National Gallery of Canada. The Puvis exhibition, accompanied by an illustrated catalogue covering about 240 paintings, sketches and drawings and a documentary section, draws on many sources, including private collections—to which murals in the Sorbonne, Hôtel de Ville and Panthéon form a supplement—and is aimed at a re-evaluation of the artist's work. Both shows run to Feb. 14, with the Puvis exhibition scheduled to open at the Canadian National Gallery in Ottawa on March 18.

* * *

A double-bill of rarely performed Russian operas will be presented Nov. 27 and 28 by the Grand-Théâtre of Tours. Rimsky-Korsakov's "Mozart and Salieri" will be staged by Jean-Jacques Etchevery, with Philip Langridge and Jules Bastin in the two roles. "The Marriage," left unfinished after one act by Mussorgsky, will be performed in the two-act version completed by Alexander Tcherepnin. It will be staged by Michel Jarry, and the cast includes Michele Pena, Agnes Disney, Berthe Monmart, Philip Langridge and Gerard Leca. Louis Bertholon conducts both works.

* * *

A season of concerts at the Musée National Message Biblique Marc Chagall in Nice begins Nov. 27 with the Academy of St. Martin in the Fields, followed on Dec. 4 with a recital by the baritone Hermann Prey with Irving Gage as pianist. Other concerts during the season will be given by the pianist Vladimir Ashkenazy, the Bartok, Orford and Parrenin Quartets, and on May 23 two concerts by Karlheinz Stockhausen, including a work to be composed specially for the museum.

* * *

The Vienna Kammeroper begins its 24th winter season on Nov. 24 with a new staging of Haydn's "Die Welt auf dem Monde," a work that the company successfully produced 11 years ago. It will be under the musical direction of Carlos Piantini, staged by Glado von May, and with sets and costumes designed respectively by Ruth Pulgram and Lucia Listopad. Twelve performances are scheduled through Dec. 21.

* * *

Roland Petit, who did his entirely new version of a classic of the ballet repertory, "Coppelia," last season, will do the same for another, "The Nutcracker," this season. The production, staged for his Ballets de Marseille, will be given first from Dec. 3 to 5 in Marseilles before coming to the Théâtre des Champs-Elysées in Paris from Dec. 11 through Jan. 16, then returning to Marseilles for another series of performances from Jan. 27 to Feb. 6. The sets and costumes will be by Ezio Frigerio, who also worked with Petit on "Coppelia," and the principal roles will be danced by Elisabetta Terabust, Rudy Bryans and Denys Ganio. Jacques Bazire will conduct.

L'ALCHIMIE DES PHILOSOPHES
10 illustrated prints by DALI.
Until December 15.

TRIBUNE READERS ARE UP ON THE WORLD OF ARTS AND ANTIQUES
For one thing, the Tribune's Saturday Art Pages provide a constant flow of informative articles for discerning readers. Secondly, Tribune readers are the kind of people who can afford to buy, and invest in good Art and Antiques
To reach Tribune readers with an advertisement in "Art Exhibitions" or "Auction Sales" please contact:
Miss Françoise CLEMENT,
21 Rue de Berri, Paris (8e).
Tel.: 225.28.90. Telex: 280509.

Tokyo Acts to Cut Trade Surplus

By John Saar

TOKYO, Nov. 19 (WP).—Reacting strongly to a threat of Euro- protectionism, Japanese ce Minister Takeo Miki today ed urgent measures to reduce e surplus in Japan's trade e nine Common Market

atements by Mr. Miki and r ministers indicate Japan a hasty and positive re- e to three requests by the pean Economic Community r than risk an implied threat port controls.

ials of eight ministries and cies met today to discuss pos- courses of action and agreed alidate firm proposals next nesday.

ister of International Trade Industry Toshio Komoto ded that before the EEC unit starts Nov. 29, Japan d respond to the appeals for ent on shipbuilding, exports of automobiles to Britain and ased importation of process- ed.

e confrontation with the ean Market was caused by n's export-heavy economic cy. For the first nine ths of this year, exports to EEC were 21.4 per cent higher 1975, while imports were up than 1 per cent. A trade lance for the year of $4.2 n in Japan's favor is fore- in contrast to the $3.2 billion year.

he unprecedented joint mes- sage delivered Tuesday by EEC external affairs minister Finn-Olav Gundelach to Japanese Deputy Foreign Minister Bunroku Yoshino at their Brussels meeting drew a swift response. On return to Tokyo, Mr. Yoshino said: "The question is whether we should allow them to boycott Japanese goods or make immediate efforts to correct the trade imbalance. Our alternative is clear."

The message given to Mr. Yoshino was unmistakably strong and it has spurred a two-day flurry of high-level meetings in Tokyo. Ministers admit no Japanese blame for the imbalance, but recognize it causes "political problems" in the European countries where industrialists, labor leaders and opposition politicians have called for import restrictions.

A spokesman for Keidanren, the Federation of Economic Organizations, commented. "We found many of the criticisms ill-founded but we sensed the problem is becoming politically difficult in Europe. So whether we like it or not, Japan has to respond with a politically tinted economic answer."

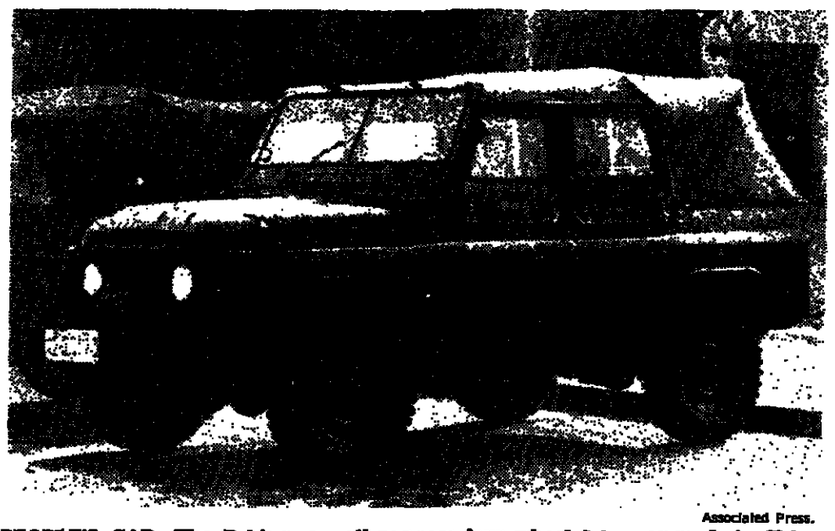
Mission to Europe

TOKYO, Nov. 19 (Reuters).—The Japan Automobile Manufacturers' Association said today it will send a purchase mission soon to the EEC to increase imports of auto parts from the member nations.

The mission is in line with government plans to reduce Japan's trade surplus with EEC, the association said.

The association has also decided to call on member manufacturers to export vehicles to the EEC, and especially to Britain, in an orderly manner so that the share of Japanese-built vehicles there does not increase sharply.

The association said it has decided to ask the government to simplify vehicle import procedures and postpone the application of rigid 1978 automobile exhaust standards on imported cars. The standards are criticized overseas as effective non-tariff barriers.



Danish Tax Bill Is the Biggest In OECD Area

PARIS, Nov. 19 (AP-DJ).—The Danish government collected more ta. revenue as a percentage of gross national product in 1974 than other members of the Organization for Economic Cooperation and Development.

According to an OECD study, the Danish government collected 46.68 per cent of GNP in taxes in 1974, including social security contributions. It was followed by Norway with 45.27 per cent, the Netherlands 45.18 per cent and Sweden 44.21 per cent.

The 296-page study, covering 1965-1974, claims to be the most comprehensive compilation of national tax revenues so far issued on an internationally comparable basis.

Tax-collection figures in 1974, as a percentage of GNP, among major OECD member countries were as follows: West Germany 37.64, France 37.50, Britain 35.56, Canada 34.79, Italy 31.86, the United States 28.93, Switzerland 26.21, and Japan 22.18. Spain was at the bottom of the list with 18.83 per cent.

Associated Press.

PEOPLE'S CAR—The Peking, an all-purpose four-wheel drive car made in China, is going on sale in France. It will be the first time vehicles made in China have been exported other than to Hong Kong. It has four-cylinder gasoline engine giving mileage of about 14 miles a gallon, and its expected retail price will be $7,000.

Increasing Government Controls Cited

U.S. Firms See Growing Problem Abroad

NEW YORK, Nov. 19 (AP-DJ).—U.S. executives say they are having an increasing problem coping with a growing number of government controls in the foreign nations where they have operations.

They described their concern at a meeting here of business leaders at a session sponsored by the Conference Board.

They expressed their worry over the trends abroad pointing to more price and product controls, requirements for domestic product content and ownership, and new requirements that labor unions be allowed more say in the day-to-day decisions of management.

Mack Verhyden, vice-president of Caterpillar Tractor Co., said that the Brazilian government recently changed its price control procedures which will cause companies to have to wait 45 days or longer for their price increases to become effective. Caterpillar has operations in Brazil and 12 other foreign countries.

Ivan Burns, vice-president, international operations of ACF Industries Inc., a New York-based rail equipment and auto parts concern, said that he is concerned that foreign countries are starting to require that products not only be made locally but also be made by companies owned locally.

He cited the case where the Anglian Water Authority, in Britain, awarded a computer contract to a British company instead of to another British company because the latter was owned by a Minneapolis concern. And this occurred despite the fact that the Anglian water staff had recommended the losing company's computed that would have saved Anglian about $2.6 million.

This case, Mr. Burns said, "would seem to confirm an anti-foreign-owned company stance by the British government."

Philip Caldwell, executive vice-president, international automotive operations, of Ford Motor Co., said that increasingly in Europe laws are requiring that unions take part in decision-making.

By June 30, 1978, for example, 50 per cent of all corporate directors in West Germany will be representatives of workers. And this January Swedish companies must bargain with unions "on almost any issue the union chooses," including capital investments.

While Mr. Verhyden of Caterpillar Tractor addressed his comments primarily to the situation in South America, he summed up the attitude of most executives at the meeting when he said: "We recognize that these controls by governments are entirely within their prerogative. We have the choice of complying or else going home."

.3% Price Rise in U.S. Smallest in 7 Months

WASHINGTON, Nov. 19 (AP)—Consumer prices rose 0.3 per cent in the United States during October, the government said today. It was the smallest increase in seven months as America's inflation rate continued its moderating trend.

The increase in the consumer price index followed a rise of 0.4 per cent in September and monthly advances of 0.5 per cent during the June-August period.

The Labor Department said October's price increase was the smallest since a 0.2-per-cent rise last March. Over the past 12 months, retail prices have risen 5.3 per cent, marking the smallest increase since the 12-month period ending in April 1973, when they rose 5.1 per cent.

In a separate report, the department said the purchasing power of the average American worker's paycheck rose last month after declining in August and September. Today's economic reports were bright spots in an otherwise bleak picture of high unemployment and slow economic growth.

Wholesale industrial prices, which are influential in setting the overall inflation trend, have been rising steadily since May. However, these higher wholesale prices have not yet show up at the retail level.

Greenspan Comment

Alan Greenspan, President Ford's chief economist, tended to discount the wholesale price trend in a speech to the Rubber Manufacturers Association yesterday. He said "there is just no corroborating evidence" to support the idea of a new outburst of inflation.

Mr. Greenspan said the long-term inflation rate is slowing down and, in what appeared to be a warning to President-elect Jimmy Carter, predicted that the downward trend will continue if the government reduces its budget deficit by following "sensible fiscal and monetary policies."

In October, the consumer price index stood at 173.3, meaning that a market basket of goods and services costing $100 in 1967 now costs $173.30. The index is not adjusted to discount seasonal influences, as are the percentage increases.

The seasonally adjusted 0.3-per-cent increase in overall prices last month reflected higher costs for new cars, gasoline, natural gas, electricity, transportation services, fruits and vegetables and some foods, the Labor Department said.

Stocks Gain In N.Y. on Heavy Trade

NEW YORK, Nov. 19 (IHT).—The stock market, under selling pressure during part of the session, firmed in late trading to close mostly higher. Volume was again heavy on the New York Stock Exchange.

Analysts said the early rally was cut short partly by profit-taking after yesterday's strong advance. But worries over the future price of oil also caused some selling. The Shah of Iran repeated earlier demands for a more than 15-per-cent rise in the price of oil.

The analysts said, however, the basic market tone was positive, with indications that the incoming Carter administration will move cautiously on economic policy. Expectations of an easier monetary policy also helped the market, they said.

The Dow Jones industrial index was off 1.33 points at 948.90. Last Friday the index stood at 927.69.

Advancing stocks by far outnumbered declines by the close, with about 900 issues gaining compared with about 550 issues closing lower.

Volume was heavy, with 24.55 million shares changing hands, compared with 24 million yesterday.

The New York Stock Exchange said at about 1021 EST today its annual trading volume record was broken.

The record had been 4,693,426,508 shares in 1975, it said.

The exchange said the year's volume to date through the end of October was 4,444,500,198 shares.

Volume to date through and including today's first hour of trading, it said, totaled 4,697,440,728 shares.

Among the blue chips, Du Pont gave up 1 1/4 to 122 3/4 Eastman Kodak 1/4 to 86 1/8 and Exxon 1/4 at 50 1/4.

Morgan Guaranty Cuts Prime Rate to 6.25%

NEW YORK, Nov. 19 (AP).—Morgan Guaranty Trust Co., the sixth largest U.S. Commercial bank, said today it will cut its prime lending rate from 6.5 to 6.25 per cent on Monday.

The announcement followed a statement by Citibank which said it would not reduce its base rate from the 6 1/2-per-cent level.

The last round of rate-cutting by major banks came in late October, when institutions reduced their rate from 6 3/4 to 6 1/2 per cent.

'Paunch Corps' to Rescue in Third World

By Joe Alex Morris Jr.

TEHRAN.—At 70 years of age, Thomas Phelan has embarked on a new career, making his financial expertise available to the developing world free of charge.

A former president of the Los Angeles Stock Exchange and later the Pacific Stock Exchange, Mr. Phelan is a member of the International Executive Service Corps, familiarly known as the "paunch corps."

His new job: Whipping the fledgling Tehran Stock Exchange into shape.

The idea of international banker David Rockefeller, the paunch corps gets its nickname from its most distinguishing trait: Its members are mostly in their late 60s or 70s, and some of them have waistlines that fit their many years in the good life.

IESC is now 12 years old. Its purpose is to take business executives, bored with retirement, and put their talents to use in developing countries around the world. In those 12 years, IESC has carried out more than 7,000 projects in 55 countries, using 2,200 volunteer retired executives who slave away happily without pay.

Largely financed by the businesses they advise (the U.S. government helps out in especially needy countries), the paunch corps has no official taint. The volunteers, who have nothing to lose, tend to be the kind of executives who like calling a spade a spade, even when it's the owner's son-in-law who is fouling up the works.

But their biggest asset, according to the Iran operations director, John Noel jr., is their tremendous motivation. "These are mostly men who never wanted to retire, and they work like fiends once back in harness," he said. "We had a petrochemical man here recently who was in his late 70s. He was a real pistol."

Another great advantage is that paunch corps men normally stay on a specific project for only three months. They are there to give advice, not be a crutch. And their hosts are asked to provide a counterpart who can take over when the American executive packs his bags.

Mr. Phelan is but one of 8,000 retired executives in the volunteers file at IESC headquarters in New York. Field directors like Mr. Noel are spread through 44 countries in the Third World. When they find situations requiring instant expertise, New York selects the best man for the job.

"Our men have the rare combination of practical and theoretical skills," Mr. Noel said. "Most of them have started at the bottom and worked up."

With almost five decades in the stock markets (he started out in 1929 after graduating from the University of California at Los Angeles), Mr. Phelan has a talent for helping young countries struggling to set up exchanges—lands where a stock exchange often contradicts traditional ways of doing business: Iran is such a case. Earlier, Mr. Phelan was in South Korea and Colombia.

He was not surprised when he paid his first visit to the exchange here and found it a sonorous place where the brokers did not seem to be doing anything. In South Korea, he recalled, the most active stock was that of the stock exchange itself.

The Iranian exchange is just eight years old and only recently moved out of a room at the central bank into a building of its own. The problem here is one of rapid expansion.

Shah Mohammed Reza Pahlevi has decreed that 306 major Iranian companies go public as part of his spread-the-wealth schemes. "We need the experience of others with gray hair," said Nasrolah Larijani, exchange director.

About 60 stocks are listed on the Tehran exchange, and Mr. Larijani expects this to increase to 100 by March. Volume of turnover doubled in the first six months of this year, but the big push has yet to come.

Bechtel Says Plan Shelved For Private Nuclear Firm

NEW YORK, Nov. 19 (AP-DJ).—Bechtel Corp. has confirmed that the proposal to build and operate the first U.S. privately owned uranium enrichment plant is being shelved.

Bechtel is the architectural engineering concern that manages Uranium Enrichment Associates (UEA), the three-company group that had planned the $3.5-billion plant.

A spokesman for the San Francisco-based Bechtel made the disclosure in response to questions raised by an announcement yesterday by Goodyear Tire & Rubber Co. that it is withdrawing from the group.

Officials of Williams Cos., the third members of the group, could not be reached for comment.

Industry observers have considered the project's future doubtful since earlier this fall, when the Ford administration's proposed Nuclear Fuel Assurance Act failed in Congress.

The bill would have allowed private concerns to participate in uranium enrichment, with government technology and assurances against failure of the venture. The bill was cleared by the Joint Committee on Atomic Energy and the House, but failed in the Senate by a narrow vote near the end of the session.

Uncertain Future

Goodyear chairman Charles Pilliod jr., in announcing the decision to withdraw, blamed "uncertainty" about the future of private uranium enrichment stemming from failure of the bill.

Ironically, Bechtel maintains, the private enrichment plant plan was born in response to a 1972 government plea for private industry proposals to build and operate such plants. Bechtel was the first to step forward with a proposal and seemed likely to sponsor the first private enrichment plant.

That likelihood was strengthened in 1975 when Goodyear and Williams Cos. joined Bechtel to form UEA, and got further impetus in June of last year when President Ford proposed a program to encourage private uranium enrichment plants. The Nuclear Fuel Assurance Act stemmed from the Ford program.

A Bechtel spokesman said in a telephone interview that UEA will continue to exist but that activity on the project would be suspended pending any possible future legislative mandate to proceed.

Fed Reduces Discount Rate

WASHINGTON, Nov. 19 (Reuters).—The Federal Reserve system said today its board of governors approved the reduction in the discount rate to 5.25 per cent from 5.5 per cent, effective Monday.

The reduction is effective for 11 of the 12 district banks, the Fed said.

Only the Federal Reserve Bank of St. Louis has not yet reduced its rate.

This is the first change in the discount rate since Jan. 19, 1976, when it was reduced to 5.5 from 6 per cent.

Goods Orders Up 3 Per Cent in U.S.

WASHINGTON, Nov. 19 (Reuters).—New orders for U.S. durable goods rose 3 per cent or $1.4 billion, to $48.04 billion in October following a downward revised 2.9-per-cent decline in September, the Commerce Department reported today.

The increase was due largely to a substantial rise in orders for defense-related capital goods, which jumped $1.2 billion, or 82.6 per cent, to $2.68 billion.

If the effect of this rise were excluded, the Commerce Department said, the increase in new orders would have been 0.4 per cent for the month.

Shipments increased $163 million, or 0.3 per cent, to $47.2 billion following an upward revised decline of 2.7 per cent in September.

Esso Threatens to Quit Italy Over Prices

By Barth Healey

ROME, Nov. 19 (AP-DJ).—Esso Italiana SpA has informed Premier Giulio Andreotti and its parent concern, Exxon Corp., that it will end operations in Italy early next year if any eventual increases in crude oil prices can not be immediately passed on to the consumers.

It was the first such formal threat the company has made. In answer to almost monthly rumors over the past two years that Esso might pull out, president Aldo Sala has always responded that the company would try to hold out a little longer. His patience and that of his parent firm are now exhausted.

There is no buyer for what is the second-largest oil company in Italy, after the state holding concern Ente Nazionale Idrocarburi (ENI).

"Why should AGIP (ENI's retail arm) take on our losses? It has enough of its own," a top official of Esso Italiana said in response to questions about a possible sale.

Esso Italiana lost $91 million last year. It lost another $70 million in the first half of this year, then losses slowed down. But losses in October were still $9 million, indicating overall losses this year could reach $120 million.

$1 Billion Invested

Exxon has invested $1 billion in Italy, so closing the plants without finding a buyer would constitute a major write-down for the parent firm, even after amortization.

Esso would be the third large oil company to leave Italy in as many years. The local Shell unit sold out to AGIP, and that of British Petroleum Ltd. sold out to the Monti group. AGIP has since been trying to resell the Shell units to Iran, but Iran has insisted that the profitable Deutsche AGIP be part of the package, something ENI has refused.

Under Italian law, retail prices for fuels are "administered" by a Cabinet committee. In theory, adjustments to retail prices are to take place the month following any increases in crude oil, refining costs or other company charges.

In practice, the retail adjustments take many months, which, the companies charge, means they must operate at a loss—which they never make up.

One insider said that an invitation by the companies to have the committee examine their books at first hand—"to overcome an understandable credibility gap"—had no effect in speeding up the retail price changes.

Loan Delinquency Up

NEW YORK, Nov. 19 (AP).—The Export-Import Bank, which makes loans and loan guarantees to foreign buyers of U.S. goods, says its loan delinquency rate has jumped sharply. Among developing nations in arrears on loan payments are Zaire, $8.7 million behind; Nigeria, $1.55 million; Mexico, $1.2 million, and Thailand, $2 million.

rench Aim n Economy een Failing

ASHINGTON, Nov. 19 (IHT). rance's seventh economic plan, d into law in July, is totally ealistic in its economic ob- ives, according to a long-term ast by Chase Econometrics. e prediction, contained in a t entitled The World Econ- in the Coming Years, was s by John Norris, director of national economics at the Cynwyd, Pa., forecasting , a subsidiary of the Chase hattan Bank NA.

The Seventh Plan amounts to ful thinking," Mr. Norris e. "It looks forward to re- ing France's balance of pay- s to equilibrium, returning economy to full employment, reducing the rate of infla- to 4.5 per cent by 1980. To mplish all that, it projects a o 6-per-cent growth rate for next four years."

None of those objectives lies in the realm of economic ity," Mr Norris added. "The ent French recovery has been alanced, to begin with. As we ast last September, the re- ry has been fueled primarily igher consumption spending. d investment spending has laggard in this recovery. t's going to get worse be- it gets better."

he French economy has been ged by excessive wage gains a decline in the investment/ ratio for the last two s," the report said.

10% Inflation Seen

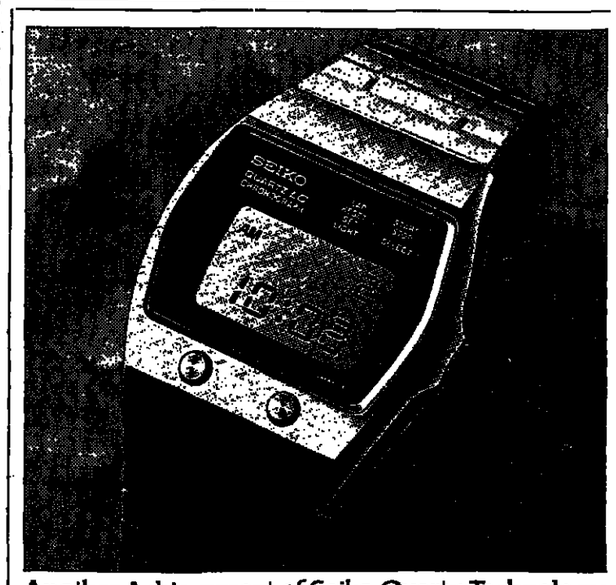
nder the most optimistic as- ptions," it continued, "the ch economy faces an aver- 10-per-cent inflation rate for next four years. Our studies ste that the inflation rate not drop below 10 per cent n annual basis until 1981. employment picture will n, and the government will achieve equilibrium in the ce of payments."

nally, the average growth for the next four years will ably be 4 per cent, slipping a high this year of 5.7 per to a growth recession level r 3 per cent in 1979."

e forecast said that part of problem with the French my "is the problem of the pean economy as a whole." he European economy will more slowly in the next ars," it said. "We expect growth in real GNP for rn Europe will fall from 4.9 ent in the 1965-74 period to cent in the 1975-84 period." hat will have some serious quences. For one thing, new tment by American multi- nal firms in European coun- will suffer a severe decline st until 1984," the report ded.

und Up 1 Cent Bank Controls

NDON, Nov. 19 (AP-DJ).—ng gained nearly 1 cent to- following imposition of new n exchange controls and ties on expansion of bank



pound finished at $1.6820, ighest level since late Sep- r. and up from $1.6730 day.

e pound also gained against mental currencies so that rade-weighted depreciation st 10 currencies narrowed to per cent from 44.8 per cent day, according to Bank of nd calculations.

This is your chance to WIN $80,500.00 TAX FREE IN THE MALTA NATIONAL LOTTERY FOR ONLY $1.40 A TICKET.
$5 for 4 tickets - $10 for 8 tickets.
PRIZES GUARANTEED BY MALTA GOVERNMENT
PRIZE MONEY PAID BY BANK DRAFT IN ANY CURRENCY, IN ANY COUNTRY IN THE STRICTEST CONFIDENCE
MALTA STATE LOTTERIES, P.O. BOX 339 VALLETTA, MALTA.
I enclose $5 for 4 tickets. - $10 for 8 tickets.

Another Achievement of Seiko Quartz Technology.
The LC Digital Quartz Chronograph
It Tells the Time and Date and Turns into a Stopwatch at the Touch of a Button.
Seiko can do it because Seiko was first to market the quartz watch and today is the world leader in quartz. Seiko's expertise in every phase of watchmaking means Seiko can make any part of any Seiko watch, for impeccable quality control. Seiko makes quartz watches with traditional analog faces and with the LC digital readout. No matter which Seiko Quartz you select, you get the watch that's changing the world's standard of accuracy. Seiko Quartz.
SEIKO
Someday all watches will be made this way.

Sales figures are unofficial.

Unless otherwise noted, rates of dividends in the foregoing table are annual disbursements based on the last quarterly or semi-annual declaration. Special or extra dividends or payments not designated as regular are identified in the following footnotes.

a—Also extra or extras. b—Annual rate plus stock dividend. c—Liquidating dividend. e—Declared or paid in preceding 12 months. i—Declared or paid after stock dividend or split up. j—Paid this year, dividend omitted, deferred or no action taken at last dividend meeting. k—Declared or paid this year, an accumulative issue with dividends in arrears. n—New issue. r—Declared or paid in preceding 12 months plus stock dividend. t—Paid in stock in preceding 12 months, estimated cash value on ex-dividend or ex-distribution date.

x—Ex-dividend or ex-rights. y—Ex-dividend and sales in full. z—Sales in full.

cld—Called. wd—When distributed. wi—When issued. ww—With warrants. xw—Without warrants. xdis—Ex-distribution.

vi—In bankruptcy or receivership or being reorganized under the Bankruptcy Act, or securities assumed by such companies.

Year's high and low range does not include changes in latest day's trading.

Where a split or stock dividend amounting to 25 per cent or more has been paid the year's high-low range and dividend are shown for the new stock only.

SENIOR EXECUTIVE JOB GUIDE

Published at the end of the week, this is a compilation of senior-level job opportunities from selected publications. Senior level jobs published by the International Herald Tribune through Tuesday automatically appear in this feature.
To place an advertisement in "INTERNATIONAL EXECUTIVE OPPORTUNITIES," contact our office in your country (listed on back page). Any questions or comments concerning this feature can be directed to Mr Max Ferrero in the Paris office

JOB TITLE	SALARY	EMPLOYER	JOB LOCAT.	SOME OF THE QUALIFICATIONS	CANDIDATES SHOULD MAKE CONTACT WITH	ADVERT. SOURCE
Hospital Director	Excellent salary & benefits	Major U.S. Corp.	Saudi Arabia	Master's degree in hospital adm.; 5 yrs. exp. hospital administrator.	Whittaker Corp., 10880 Wilshire Blvd., Suite 604, Los Angeles, Ca. 90024, U.S.A.	Wall Street Journal 10-11-76
Int'l Marketing Representative	Commensurate with experience	Florida based commercial boat building division of Fortune 500 corp.	Assumed Florida	Eng., Span.; familiar mktg. requirements in Africa, C. America, S. America & Far East.	Box G 177, The Wall Street Journal, 22 Cortland St., New York, N.Y. 10007.	Wall Street Journal 10-11-76
Managing Director		Visnews Limited.	London	Exp. in managing a profit center; track record in achieving targets; English +.	Andrew Muir (MD/IHT), Spencer Stuart & As., Ltd., 113 Park Lane, London W1Y 4HJ.	I.H.T. 11-11-76
Commercial & Administrative Manager	Excellent compensation & benefits	Progressive Houston based int'l oil co.	Indonesia	Proven background in business & administrative systems & controls.	Box D 5,553, International Herald Tribune, 21 Rue de Berri, 75008 Paris.	I.H.T. 11-11-76
Planning & Scheduling Manager	Excellent compensation & benefits	Progressive Houston based int'l oil co.	Indonesia	Proven background in petroleum product supply distribution operations.	Box D 5,553, International Herald Tribune, 21 Rue de Berri, 75008 Paris.	I.H.T. 11-11-76
Top Marketing Appointment	c. £25,000	Leading manufacturer & distributor of consumer products.	Singapore or Kuala Lumpur	Successful proven record in consumer-oriented mktg. at senior mngt. level; above 40 yrs.	Ref.: SM 14/5792/FT. PA, Hyde Park House, 60a Knightsbridge, London SW1X 7LE.	Financial Times 11-11-76
General Manager (Operations)	over £20,000	Subsidiary of one of the largest groups in Australia.	Papua, New Guinea	Over 40 yrs.; successful record of senior mngt. participation in large mktg. or merchand. oper.	B.F. Hoggett, Ref. 10087/FT, Hoggett Bowers, Minerva House, 29 East Parade, London LS1 5RX.	Financial Times 11-11-76
District Sales Manager	Very attractive remuneration	Clark Int'l Marketing S.A. (construction industry & agricultural applications).	Brussels for Middle East	Eng.+; about 35 yrs.; sales exp. in comparable technical prod.; knowledge of M.-E. mkts.	Clark Int'l Marketing S.A., Zevenbronnenstraat, 42, 1512 Dworp, Belgium.	The Bulletin 12-11-76
General Manager	Up to U.S.$25,000	North American Co. (Grains & Oil seeds).	Discussed at interview	Good knowledge of grain ind. & E.E.C. rules; bil. Engl., Fr.	Ref. 841/IHT, W.L. Tait, Touche Ross & Co., 4 London Wall Buildings, London EC2M 5UJ. T.: 01.588 6644.	I.H.T. 13-11-76
Executive Sales Manager	Unlimited income *potential*	Punta Gorda Isles, Inc.		Only seasoned, experienced, top-earning, licensed sales representatives.	Gerard Zappa, Punta Gorda Isles, Inc., 1625 West Marion Ave., *Punta Gorda, Florida 33950, U.S.A.*	I.H.T. 13-11-76

Swiss Trade Surplus

BERN, Nov. 19 (Reuters)—Switzerland had a trade sur[plus] of 294 million francs in Oct[ober] compared with a shortfall [of] 160 million francs in Septem[ber] and a surplus of 98.8 mill[ion] francs in October last year, Federal Customs Office report[ed]. This is the first trade sur[plus] after two consecutive mont[hly] deficits.

BOOKS

MARRY ME

A Romance

By John Updike. Knopf. 303 pp. $7.95.

Reviewed by Christopher Lehmann-Haupt

AT a distance, one can make out what John Updike is up to in "Marry me: A Romance," the eighth novel and 20th book he has published in his prodigiously productive career. At a distance, one can discern that he has written a more or less psychologically realistic story, yet framed it in such a way that we aren't supposed to identify with the characters or take their problems too seriously.

The story concerns two suburban Connecticut couples, Jerry and Ruth Conant and Richard and Sally Mathias, each of whom has three young children. Jerry Conant and Sally Mathias are in the midst of a heated affair with each other—an affair of winey beach trysts, secret trips to Washington and 10 a.m. telephone talks in the presence of the babysitt

They would like to leave their respective partners but must cope with questions of loyalty, the children, God's punishment and the possibility that they only desire each other because of their mutual unavailability. Their passion is realistically played out, at least to the extent that Updike evokes, as only he can with his exact and graceful prose, precisely what it must be like to be caught in such an untenable yet compelling predicament.

Yet at the same time, he tries to push the reader away from this story, or rather he tries to pull the story away from his reader. He s''tles the novel "A Romance," as if to make light of its domestic storm and stress. He sets its time early in the Kennedy presidency, as if to say this happened long ago in quite another era. He assigns Jerry Conant the profession of cartoonist-animator, with the specific job, during the time of the story, of creating "a series of 30-second spots plugging freedom in underdeveloped countries": he fills his descriptive passages with references to paintings and photographs, and he refuses to describe Jerry's and Sally's infatuation with each other in anyt''ng but the most clichéd terms—all as if to remind us that this was a time of illusion when images mattered more than substances.

He even seems to denigrate the images that perhaps still ought to matter because the substances they reflect can never be known except through faith—the midlife anxiety over death that moves Jerry to see in Sally the possibility of temporal paradise, or the Puritan sense of sin that interferes with his decision to commit himself to her. As Jerry himself says at one point, "Maybe *our trouble is that we live in* the twilight of the old morality, and there's just enough to torment us, and not enough to hold us in."

And just in case we have gotten too caught up in the realistic predicament of the story, Updike has provided three different endings—one in which Jerry goes off with Sally to their dreamstate of Wyoming; one in which he travels with his wife and children for a recuperative stay in the South of France and one in which he goes by himself to St. Croix and discovers in "the existence of this place . . . a dimension in which he did go, as was right . . and stand, timid and exultant, above the downcast faces of her gracious, sorrowing face, and say to Sally, 'Marry me.'" It's as if Updike were saying, take your pick; it's all quaint and illusory, however it turns out.

The trouble, at least for this reader, is that it's never quaint and illusory. One grows too deeply involved in the domestic drama, weighs too seriously the relative claims of familial responsibility and erotic passion, takes Updike too much at his incomparably seductive word. One worries about the children, even though, surprisingly, they are described as if they were merely objects (perhaps Updike has done so in order to even up the case for infidelity). One writhes in sympathy for the betrayed, especially since they invariably behave as good generous sports (amazing how Updike retains the reader's sympathy for everyone involved in the story). One cheers when, during a confrontation scene between the two couples, Ruth Conant remarks: "If we all had to sweat for our food we wouldn't have time for this—this folly. We're all so spoiled we stink."

In short, I cared about these people in the 1960s and found their psychologically realistic problems altogether relevant to present times. So everything that Updike does to distance me from his story—from shrugging it off as a mere "romance" to indulging his tendency to write showoffy descriptive passages—came at me like so many slaps in the face.

Of course, it may be that I am hopelessly behind the times in taking the moral issues of "Marry Me" seriously. Or it may be that Updike has written a novel ahead of its times, and that in another decade or so its *now undetectable ironies* will come into relief and it will seem, like several other Updike novels, such as "The Centaur" and "Of the Farm," a better book than it first appeared. But for the time being at least, by taking the subjects of marital fidelity and the viability of the nuclear family, and treating them as if they were quaint anachronisms, Updike seems less to have ascended to a long-run perspective and more to have simply ducked important issues.

Christopher Lehmann-Haupt is a book reviewer for The New York Times.

Pro Football Weekend

Rams Must Buck 49ers' Sacking 4

N FRANCISCO, Nov. 19 (UPI).—The Los les Rams will be out to protect their past e the San Francisco 49ers will be aiming to re their future Sunday when the two members s NFC West battle for first place.

e Rams are shooting for their fourth straight ional crown and presently hold a slim half- lead over the 49ers, with a 6-3-1 record. But of those losses was a 16-0 setback at the of the 49ers.

n Francisco will look to its front four to ate the tempo of the contest just as it did in first game, when the unit of Tommy Hart, ck Hardman, Cleveland Elam and Jimmy recorded 10 sacks.

e 49ers have recorded an NFC-high 44 sacks gh the first 10 games of the season.

e following preview of the NFL weekend was ared by William N. Wallace of The New Times.

AMERICAN CONFERENCE

ston (4-6-0) at Pittsburgh (6-4-0)—The s now have lost five in a row. But they al- beat Cincinnati with John Hadl at quarter- and he will stay there. Terry Bradshaw won't play, and so Mike Krucsek is the Steeler quarterback. He throws just enough passes to discourage the 11-man line on defense. Favorite: Pittsburgh by 15.

New England (7-3-0) at Jets (2-7-0)—The Patriots' itchy management has already announced ticket plans for the playoffs, with prices raised to $7, $12 and $15. Steve Nelson, kingpin of the defense, will not play and Sam Cunningham and Russ Francis, kingpins of the offense, probably will not. Favorite: New England by 10.

Cincinnati (8-2-0) at Kansas City (3-7-0)—The Bengals play the Steelers next, but any two victories in last four games puts them in the play- offs. The chiefs have lost all five home games and attendance is down. Ed Podolak, once one of the best, will start for the first time following a severe muscle pull. Favorite: Cincinnati by 11.

Cleveland (6-4-0) at Tampa Bay (0-10-0)—The Browns have won five of their last six games with- out much help from their running star, Greg Pruitt, who has a severe ankle sprain. He will try again. The Buccaneers' John McKay claims he will have two Southern California aces start- ing for him next season, Anthony Davis and Ricky Bell. Favorite: Cleveland by 14.

San Diego (4-6-0) at Buffalo (2-8-0)—The Chargers, who have lost six of their last seven, had one of those closed team meetings this week, a meeting of souls. O.J. Simpson is 10th in league rushing yardage with 738. He needs 70 a game to make 1,000. Favorite: Buffalo by 4.

NATIONAL CONFERENCE

Los Angeles (6-2-1) at San Francisco (6-4-0)—These teams seem to be backing towards the play- offs. Collectively they have lost five of their last six games. The Rams will stick with Pat Haden as their quarterback. He was on the bench when the 49er pass rush buried James Harris six weeks ago. Favorite: Los Angeles by 3.

Washington (6-4-0) at St. Louis (8-2-0)—George Allen is being cute about his quarterback selection again, hinting he will start Bill Kilmer over Joe Theismann. The Redskins are dying, but are not dead yet The Cardinals have everyone ready, including Mel Gray, who missed the last two games. His teammates won both with last-minute field goals. Favorite: St. Louis by 7.

Chicago (5-5-0) at Detroit (4-6-0)—A mark of a poor team is one that outgains its opponent 2.5 yards to one and still loses. That was Detroit Sunday against New Orleans, 448 total yards to 183, and a 17-16 defeat on account of fumbles. Nevertheless, all 80,000 seats in Pontiac's newly named Silverdome have been sold. Favorite: Chicago by 1.

Dallas (9-1-0) at Atlanta (3-7-0)—Cowboy fans are working their worry beads over an offensive slump. And the team has lost once, to St. Louis by four points. The running backs this week will be Preston Pearson, their best bet, and Scott Laid- law. The Falcons now feature an old quarterback, Scott Hunter, and two rookie runners, Sonny Col- lins of Kentucky and Mike Esposito from Boston College. Favorite: Dallas by 12.

Minnesota (8-1-1) vs. Green Bay (4-6-0) at Milwaukee—The Vikings can clinch their eighth divisional title in the past nine years by winning against a team starting a new quarterback, Carlos Brown. His NFL experience amounts to 21 pass attempts, seven completions. Favorite: Minnesota by 10.

New Orleans (3-7-0) at Seattle (2-8-0)—The Seahawks are favored—by one! "I never expected that to happen to us this year," said the coach, Jack Patera. Rich Szaro, the well-traveled kicker from Brooklyn and Harvard, has 13 field goals in 16 tries for the Saints—11 in a row. Favorite: Seattle by 1.

INTERCONFERENCE

Oakland (9-1-0) at Philadelphia (2-7-0)—Last Jan. 26, Mike Boryla was the star of the Pro Bowl game and Roman Gabriel was on crutches. Now Gabe makes his first start for the Eagles as Boryla, 11 years younger, goes to the bench, interrupting the club's youth movement. The Raiders, who despise those East Coast trips, can clinch their fifth straight division title with a victory. Favorite: Oakland by 9.

Giants (1-9-0) at Denver (6-4-0)—Bronco play- off hopes are still alive, but dependent upon Patriot and Steeler collapses. Denver's defense has two straight shutouts behind it. How about a salute to the Giant defense, which has not given up a a touchdown in the last 10 periods? Favorite: Denver by 10.

MONDAY NIGHT

Baltimore (9-1-0) at Miami (5-5-0)—Bob Kuchenberg is the latest Dolphin casualty. His absence requires another rearrangement of the offensive line. The Colts lead in quarterback sacks, 4.6 a game, so look out, Bob Griese. Favor- ite: Baltimore by 6.

Raul Ramirez, the Mexican nemesis of U.S. Davis Cup team.

U.S. Davis Cup Chief Summons Big Guns for Mexico Match

By Neil Amdur

NEW YORK, Nov. 19 (NYT).—Tony Trabert believes the time has come to treat the Davis Cup with the dignity it deserves in international tennis.

"Why not designate the last week of every month 'Davis Cup Week'?" the U.S. captain said, outlining his plan for upgrading what once was the symbol of team supremacy in the sport. "You could set aside a certain number of weeks and schedule all the matches within that framework. The public could follow it easier, and the top players could be encouraged to play without being penalized for missing any Grand Prix tourna- ments."

Trabert believes the Davis Cup is at a crossroads, surrounded by politics, big-money tournaments and special-interest groups that threaten its existence.

It may be only a coincidence that the United States' decline in the cup has come during the sport's biggest financial boom. The United States has not held the cup since 1972 and has been eliminated in the American Zone the last three years.

With this in mind, Trabert is more determined than ever to summon the big guns for the North American Zone match with Mexico Dec. 17 through 19 in Tucson, Ariz.

'The Best Guys'

"We want to try to field the best guys we can," the former top-ranking American said by phone from California after re- turning from the opening U.S. victory in the 1977 draw over Venezuela last weekend.

Presumably, the "best" means Jimmy Connors, Roscoe Tanner and Arthur Ashe for the two single spots and either Stan Smith-Bob Lutz or Fred McNair- Sherwood Stewart for doubles.

"I'm counting on Jimmy play- ing," Trabert said, referring to Connors, once the missing link in the U.S. cup program. "And there's no question if he's avail- able and wants to play, I'll use him. I've got to feel he wants to nail Raul Ramirez in the cup after what happened last year."

Connors lost to Ramirez, 2-6, 6-3, 6-3, 6-4, in the crucial sin- gles match that provided Mexico with a 3-2 victory. The U.S. team of Dick Stockton and Erik van Dillen also was beaten in the doubles by Ramirez and Marcelo Lara.

"I don't want to go with an unestablished doubles team," Trabert said. "But I want to check the records of Smith and Lutz and McNair and Stewart over the last six months before I settle on anything."

One-Man Tormentor

Ramirez has been a virtual one-man tormentor the last two years, winning all four singles matches. Trabert's decision could be affected by the physical con- dition of his players, especially Ashe, who has been bothered by foot problems in recent weeks and left the tour to be examined by several specialists in Boston and New York.

Ramirez Wins Prize

LONDON, Nov. 19 (UPI).—Ramirez today won the $150,000 first prize in the Grand Prix bonus pool when Manuel Orantes, the only man who could have headed him, said he would not compete in the Grand Prix's final tournament.

The Spaniard, who was de- feated in the first round of the Benson and Hedges tournament earlier this week, had only a slim chance of catching Ramirez in next week's final event in Johannesburg. Ramirez has 883 points to the 811 of Orantes.

Orantes was assured of finish- ing second and winning the $100,000 runner-up award.

Fibak Beats Nastase

LONDON, Nov. 19 (Reuters).—Ilie Nastase of Romania succumb- ed today to the rising young Polish tennis star, Wojtek Fibak.

Fibak emerged victor, 7-6, 6-7, 6-4, in a superb quarterfinal at the Benson and Hedges Grand Prix tournament at Wembley.

In a dramatic second set, Nastase, seeded No. 2, saved 10 match points before winning the set on a tiebreak, 10-8. He saved four of them at 5-4, two at 6-5 and the other four in the tie- break when he trailed 6-3.

The final set went with service for four games, but Fibak got what turned out to be the deci- sive break in the fifth game. Nastase needed only a point to get the break back in the eighth game, but Fibak held on and took his own service to love in the 10th game, winning the struggle on his 11th match point when Nastase netted a tame backhand.

Top-seeded Jimmy Connors of the United States also reached the semifinals today, beating fellow American Stan Smith, 6-3, 7-5.

Matthews Signs With Braves

Gullett Goes for Yankees' Millions

By Murray Chass

NEW YORK, Nov. 19 (NYT).—Jumping checkbook-first into the free-agent market, the Yan- kees added Don Gullett yester- day to their already star-studded pitching staff.

The Yankees, who have been accused by some other clubs of having bought this year's Amer- ican League pennant, are be- lieved to have given Gullett a $2-million package for six years.

The signing of the pitcher who started the first game for the Cincinnati Reds in each of the last two World Series was the second of the day in baseball. Gary Matthews, an outfielder formerly with the San Francisco Giants, signed with the Atlanta Braves for five years at an es- timated $1.75 million after spurn- ing an offer of more than $2 mil- lion from the Montreal Expos.

The two signings brought to eight the number of free agents who have signed since baseball staged its historic negotiation- rights draft Nov. 4 Seven more top-caliber free agens remain.

The Owners' Argument

Interestingly, all eight players who have signed have moved to teams with worse 1976 won-lost records than their former teams had. That would seem to belie the old argument by the owners that if players were free agents they all would flock to the best teams.

As soon as the Yankees an- nounced the Gullett signing, Gabe Paul, their president, de- parted for Providence, R.I. He will resume his negotiations there with Jerry Kapstein for Bobby Grich, the man the Yan- kees want as their shortstop and the second of the two free agents they're permitted to sign.

The latest line on Grich in- dicates that the California An- gels are the Yankees' primary competition for the 27-year-old infielder. Harry Dalton, the An- gels' general manager, also was reported to be on his way to Providence. Kapstein's head- quarters.

In announcing that they had given Gullett a six-year contract, believed to be the longest in base- ball, the Yankees declined to disclose the terms. However, when a knowledgeable general manager of another team was asked if he thought the pitcher had received as much as $2 mil- lion, he said: "That's reasonable."

'If You Can't' Beat 'Em'

In acquiring the hard-throwing left-handed pitcher, the Yankees paraphrased an old saying—"If you can't beat 'em, join 'em." In this case, it came out, "If you can't beat 'em, buy 'em."

Gullett, who will be 26 in Jan- uary, beat the Yankees in the first game of the 1976 World Series, which the Reds swept in four games.

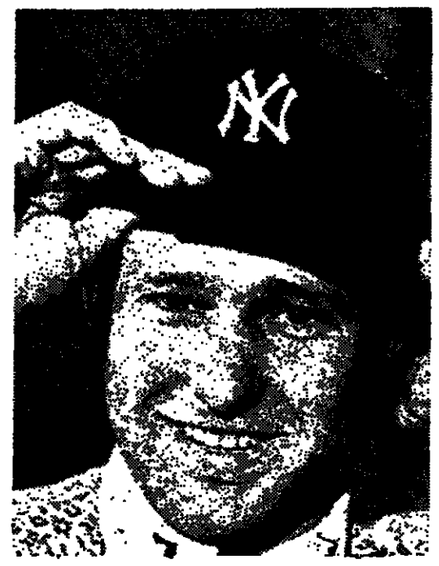
Although he has been plagued with various ailments in his seven-year career, Gullett has compiled the best winning per- centage (.684) among active pitch- ers with 100 or more decisions. He will join Catfish Hunter, Ed Figueroa, Ken Holtzman and Dock Ellis in a jam-packed pitch- ing rotation, assuming Ellis or Figueroa isn't traded.

Hunter and Holtzman have no- trade clauses in their lucrative contracts.

"We feel Gullett is a modern Whitey Ford," said Paul, who has become accustomed to announc- ing million-dollar deals.

Ford, a Hall of Famer, posted a .690 winning percentage in his glittering career with the Yankees from 1950 through 1967, when arm trouble finally forced him into retirement.

Gullett, a 6-foot, 190-pound Kentuckian, has had all sorts of trouble in his career, although he has achieved as many as 35 starts in only one season. He suffered from hepatitis in 1972, fractured a thumb last year and was hampered much of this past season by neck and shoulder problems. Then, in the Series opener, he stepped in a hole in the eighth inning and dislocated a tendon in his right ankle that finished him for the Series.



The Yankees, however, were confident there would be no lingering problems from the ankle injury. "We did not have a doc- tor examine him," Yankee Pres- ident George Steinbrenner said, "and we didn't ask to see a doc- tor's report. Jerry Kapstein operates aboveboard. He assured me his ankle is all right and we took his word."

Ted Turner, the owner of the Atlanta Braves, didn't want to take any chances on losing Mat- thews. He courted the 26-year- old outfielder more aggressively than a boy would court a girl and landed him at a price well above the $1 million he gave Messersmith when he signed the pitcher as a free agent last Spring.

Matthews, who batted .279, hit 20 homers and drove in 84 runs for San Francisco this past sea- son, would have signed with the Giants last spring for $65,000, up from his $46,000 salary of 1975. But the Giants offered $60,000 and Matthews decided to become a free agent.

The Expos, who signed Dave Cash Wednesday, offered Mat- thews more than $2 million last week. "They just about said, 'Write your own ticket,'" Ted Keating, the player's agent, said.

The Canadian tax structure is such, though, that Matthews could wind up with more money from a $1.75-million package with Atlanta than from a $2.25-million deal with Montreal.

Don Gullett trying on his new cap.

AP.

Royals' Ex-Manager to Lead A's

OAKLAND, Nov. 19 (UPI).—Jack McKeon, fired from Kansas City in the middle of the 1975 campaign, will manage the Oak- land A's next year.

Unpredictable Charlie Finley yesterday named McKeon to re- place Chuck Tanner, who com- pleted a year of a three-year pact before being sent to Pittsburgh in a unique deal for catcher Man- ny Sanguillen and $100,000.

McKeon, a North Carolina resi- dent who turns 46 next week, was a minor league pilot for 11 years before getting the Royals job in 1973.

Kansas City was 88-74 in 1973, just six games behind the A's, but slumped to 77-85 in 1974. The Royals were 50-46 in 1975 when he was sacked by general man- ager Joe Burke.

Last year, he managed at Rich- mond of the triple-A Interna- tional League.

McKeon, a catcher in his play- ing days, did not make it to the majors. He toiled 22 seasons as a player and a skipper in the minors, reaching the triple-A managerial ranks in 1962. He was tapped for the Royals' post in 1973 after guiding Omaha of the American Association to four first-division finishes in consecu- tive years.

McKeon, who was given a one- year pact by the A's, joins a lengthy list of managers who have worked for Finley. Hank Bauer and Alvin Dark managed two terms for the volatile owner, with Dark taking the A's to their last championship. Dick Williams, who recently signed to manage Montreal, holds the longevity record, working for Finley for three seasons that included the team's first two World Series triumphs.

Robinson Loses 'Golden Glove'

NEW YORK, Nov. 19 (NYT).—Jim Kaat, who won 14 straight Golden Glove awards while pitch- ing in the American League, lost none of his fielding finesse while playing for the Philadelphia Phil- lies in the National League last season. Yesterday, he picked up his 15th straight Golden Glove award from the Sporting News.

Brooks Robinson of the Balti- more Orioles, however, failed to gain recognition as the best field- ing third baseman in the Amer- ican League for the first time in 17 years. The winner was Aurelio Rodriguez of Detroit.

The other players named to the American League Golden Glove team were Jim Palmer, pitcher; Jeff Sunderberg, catcher; George Scott, first base; Bobby Grich, second base; Mark Belanger, shortstop, and Joe Rudi, Rick Manning and Dwight Evans, out- fielders.

The remainder of the National League squad was Johnny Bench, catcher; Steve Garvey, first base; Joe Morgan, second base; Mike Schmidt, third base; Dave Con- cepcion, shortstop, and Garry Maddox, Cesar Cedeno and Cesar Geronimo, outfielders.

Celtics' Center Takes Off, Shrugging Off $250,000 Salary

By Dave Anderson

NEW YORK, Nov. 19 (NYT).—In the arenas the National Basketball Association, he was al- ways different—a red-headed center who performed in a bon- fire of hyperactive intensity. Off the court, Dave Cowens was even more different. Despite a $250,000 salary, he drives a yellow Jeep van instead of a Rolls Royce, he wore plaid shirts and corduroy pants rather than custom-tailor- ed clothes, he lives in a suburban flat above a toy store rather than in a fancy pad.

Now he's more different than ever. He talks of "feeling guilty" about not earning his salary, a unique phenomenon among to- day's high-priced athletes. He's off the payroll on a "leave of absence" from the Boston Celtics that may last a few weeks, a few months or possibly until next season.

"He's set," a friend says, "to take off until next season if he wants."

"I think" another says, "that he'll take off at least three months."

He'll take off until he's motivated to return. Motivation is a big word in sports now. It isn't enough to play anymore. Some athletes feel they have to be "motivated" for whatever reasons are important to them. With some, it's winning. With some, it's money. With some, it's the enjoyment of the game. And with Dave Cowens, it's the standard of excellence that demands of himself.

'On His Mind'

"David feels that he's not be- ing motivated by the game," says Richard Gold, the attorney and businessman who has been close to him throughout his nine sea- sons. "And if he's not motivated, then he feels he can't play up to the level he sets for himself. This is not a sudden thing. It's been on his mind for three years. His contract even provides for a 'leave of absence.'"

It's probably the only contract in sports that does. But because of the contract, Red Auerbach accepted Cowens decision with- out a scene.

"Red told him," Gold says, "that Dave Cowens perking at 60 per cent is still pretty good, but Dave said, that wouldn't sat- isfy me.'"

Red Auerbach knew enough not to argue publicly. "We could see right away in his first training camp" the Celtics' pres- ident general manager former coach and most celebrated cigar smoker once said "that nobody was going to tell this kid he could not do something if he wanted to do it." And wisely, Auerbach was not about to tell Cowens he could not take a leave of absence. Auerbach might have snarled and screamed at another player, but not at Cowens.

The other Celtics also accept- ed Cowens's decision without any apparent rancor.

'Such a Competitor'

"I guess Dave thought his per- sonal game was not up to what it should be," Jojo White said. "That he couldn't give what he wanted to give. He's such a com- petitor, that would bother him."

Cowens was averaging 18 points and 15 rebounds a game.

When an athlete takes an un- blessed leave of absence, as Dick Allen has done in baseball, man- agement and his teammates usually accuse him of betraying the team. But no nasty words about Cowens have surfaced yet. Perhaps that's because they un- derstand that he's different.

"I don't think of myself as a superstar," he has said of his decision. "I'm just a normal guy who quit his job." His team- mates know that he didn't do it as a ploy to renegotiate his con- tract or to force a trade.

"I started out as a Celtic," he told a friend not long ago, "and I want to finish as a Celtic."

He also canceled a lucrative endorsement following the an- nouncement of his leave of ab- sence.

"He told me," Gold says, "it would not be right to talk about basketball when he wasn't play- ing."

Cowens reportedly is in excel- lent health despite the loss of 15 pounds during a hectic summer of operating his four basketball camps. But his lack of self-moti- vation probably has been in- fluenced, at least subconsciously, by changes in the Celtics—the trade of Paul Silas to the Denver Nuggets after an angry holdout, the retirement of Don Nelson, the adjustment to Sidney Wicks and Curtis Rowe as forwards. Nelson was his pal on road trips and Silas was the ultimate rebounder.

"Paul gives me the chance to freelance more," Cowens once said. "He makes it easier for me to play the kind of game I like to play."

Cowens is understood to have told Auerbach to "give Silas what he wants," a $350,000 contract. He also is understood to be dis- enchanted with Tom Heinson as the Celtics coach. But the Cel- tics and Cowens and everybody else involved insist that there is no personality conflict behind his decision.

"He's too much of a pro," Gold says, "to be influenced by pet- tiness."

In his life-style that reflects his country boyhood in Kentucky, he hasn't needed much money. But now that he's not on the payroll, perhaps money will spark his mo- tivation to return. And now that he's not playing basketball, per- haps he'll miss it. Most athletes do. He'll be back, probably soon enough to help the Celtics try to repeat as champions; without him, they won't. But he always downplays his contribution.

"I feel less talented," Cowens has often said, "than a lot of guys I play against."

But he's forgetting that intens- ity is a talent that the guys he plays against do not have.

Art Buchwald

You All Spoken Here

WASHINGTON—I'm grateful to Roy Wilder Jr. and David Moffett of the "Gourd Hollow Press" in Raleigh, N.C., who sent me two little books titled "You All Spoken Here," devoted to how country people speak in the South.

Buchwald

Nobody knows how many people from the Deep South Jimmy Carter will bring with him, but the dictionaries will be invaluable to help us know what they're talking about.

For example, if the Carters are throwing a dinner party at the White House and there is a discussion of the guest list, one of Mr. Carter's aides might say, "He's too poor to paint and too proud to whitewash." They would be discussing, of course, a member of the Southern aristocracy.

If a Southern member of the staff says to you, "Don't get cross-legged," he is telling you not to get angry, or your wires crossed, or your signals mixed, or upset without knowing the situation.

There will be occasions when someone in the Carter entourage gets mad at a congressman or a senator. He may then tell the press, "He's three pickles shy of a barrel." This means he doesn't have all his marbles or "he's three bricks shy of a load," or "his traces ain't hooked up right."

If the same person says the congressman or senator is "'passin' gas faster'n he can cap it," it means the person in question is a windbag.

A Cabinet officer may be in trouble with the president. If someone says he "pulled through," it means his sins have been forgiven and "he's ready for deep-dip baptism."

* * *

Despite a Carter administration there will always be sex scandals in Washington. A man caught in one will be known as a person who is "wild as a boar in a peach orchard," which means he is unrestrained in his sexual passion.

If the president has not seen one of his appointees for a long time, he might ask him, "Did you winter well?" which is what someone in the Deep South asks a person in the spring that he hasn't laid eyes on since Christmas.

Since Mr. Carter has never been to Washington, he is not acquainted with too many members of the establishment. He might be asked, for example, if he knew Clark Clifford. The president could reply, "We've howdied but we ain't shook," which would mean that the president knows the name but was never introduced.

Some presidential appointments may get more power than others. In this case, the person in question will be referred to in the administration as a "big dog in the meat house."

If you are invited to the White House for dinner you can tell your friends, "Last night I ate the president's salt." The worst thing is to "eat another man's salt" and then knock him in public. If word gets out that you did, it could make the president angry, and his press secretary might say, "The president is as mad as a rooster in an empty henhouse."

If you apologized publicly, that "would put spit on the apple" and end the argument.

* * *

Suppose the secretary of state is confused about a diplomatic problem. The White House aides might leak the fact that the secretary is "like a rubber-nosed woodpecker in a petrified forest."

When someone comes back from a trip overseas and brags about it he will be known as "journey proud."

If he lies to the president they will say of him, "His mouth ain't no prayer book."

If he failed to give the president the information he wanted, a White House aide might say, "He never said pea turkey" or "We got what the bear grabbed at," which means they got nothing out of the conversation.

How will you know if Mr. Carter is angry? If he ever says, "That takes the rag off the bush," Brezhnev better watch out, because the lowest thing someone can do in the Deep South is steal someone's washrag that he left on a bush to dry.

A U.S. Actor and the TV-Stage Tug-of-War

By Robert Lindsey

LOS ANGELES (NYT).—The set is a brightly colored Harlem nightclub, simulated on a sound stage at Paramount Studios here, and bearded David Birney, portraying the former New York police detective Frank Serpico on an undercover mission, has just negotiated to buy weapons from an underworld arms merchant.

There is a pause in the shooting and the actor resumes a conversation with a visitor, pursuing a thought that had occurred to him during the filming.

"I just saw a friend of mine from New York, and he said: 'Here I am, I've spent 35 years on the stage, I'm 60 years old, and I don't have anything to show for it except a five-inch pile of clippings.'"

The comment reflected the ambiguity and conflicts that inhabit the thoughts of Birney these days. At 35, he has spent much of his adult life burning to succeed as a stage actor and part of it beginning to fulfill this fantasy, as a member of the New York Shakespeare Festival and Lincoln Center Repertory Theater, and in a widely praised portrayal of Romeo at the American Shakespeare Theater in Stratford, Conn.

Now, he is in Hollywood working 12-hour days, starring in a cops-and-robbers weekend television series—and missing New York

A Product

It's an old theme—the artist from the East who is seduced by the money of Hollywood. But Birney comes across as a thoughtful pragmatist who says he is a product of his generation, who admits that he likes the money here, insists that he is striving for quality in "Serpico," and who insists that he will return to the stage—while wondering at the same time to what extent he will actually go back to his original career track.

"The stage is where I began; it's what I wanted to be; and a lot of promises I made to myself have to do with that work," he said, adding: "But, you know, this is America. Television and films are obviously significant. I guess what I find sad about it, if you think back over the careers of some of our best actors, very few of them go back; [George C.] Scott has done it; Jonny Voight is trying to do it. But not many do."

In many ways, he said he thought it was a "cheap shot" for journalists and critics to deplore actors who go into television. "The experience of trying to put together a career doing things that you love, that you really care about, is very complicated," he said, "and that subject is worth about a five-page piece to really go into it.

"It's no accident that some of our best actors, best minds, best writers, best people are out here working in this business; one, because they can contact large numbers of people; and, second, because the problems are great, great in New York," he said.

Tinsmith

"A Canadian actress that I worked with doing a couple of plays said that being a stage actor in this country is like being a tinsmith. It's like a past art that nobody is terribly interested in anymore. The action, and the money, to be fair, is here."

And, despite what he described as serious obstacles—technical pressures, the need to compress a story into 48 minutes, commercial pressures—he feels that not all television is bad.

Conversely, said the actor, who attended Dartmouth and studied theater arts at the University of California here, "There's a lot of lightweight work being done in every medium, including the stage."

"Serpico" opened to mixed, but generally favorable, reviews, and among the people working on it, there appears to be a serious effort to give the program a realism and emphasis on character that they hope will lift it above the routine cops-and-robbers drama.

But the new NBC series has brutal competition and the company is concerned these days that their show may not have a chance to develop an audience before the network decides to cancel it. Only a portion of the exterior scenes are photographed in New York. Interior scenes and some exteriors are filmed here to cut costs. A former New York plainclothesman has been retained as a technical adviser. And despite the theme of the series, Emmet Lavery Jr., the producer, said that New York police authorities have cooperated during the filming of the sequences in the city.

Investigation

Neither Birney nor Lavery has met Serpico, the detective who in 1970 exposed widespread graft and corruption within the New York Police Department. His revelations triggered an investigation, a book and a movie in which Al Pacino played the role now held by Birney.

Birney has rankled some feelings among the people working on the series for supposedly being a "perfectionist" in some cases and for showing impatience with story lines that he thought were not realistic and put too much emphasis on action and not enough on character development. He also has said the series should depict, not play down, the police corruption that Serpico had pursued.

"I think we owe a debt on this series," he said. "The debt I'm speaking of is not to the real Frank Serpico, but to the idea, the myth of Frank Serpico. I don't know what the facts were; I don't know if anybody does at this point; the truth is blended into myth.

"What I think we owe a debt to is a kind of romantic idea—of a man who believed so strongly in what the police were, the idea that you can pick up a phone and make a call and two guys in a car who don't know what to expect when they get there will drive up in a few minutes," Birney continued.

Bad Guys

"There are really good guys who are trying to do the job; it's extraordinary. And the betrayal of that fact is that there are bad guys who don't try to do the job. I think it's a mistake to ignore the fact that some cops are on the take."

Birney said he has been having some informal discussions about doing a play in New York next spring, but for now his goal was to attempt to keep the quality of "Serpico" as high as possible, given the constraints of a weekly television series.

Birney is married to Meredith Baxter, whom he met after they co-starred on "Bridget Loves Bernie," a television series. She is also doing television work here. They own a home in the Santa Monica mountains.

When it came up that the house had a swimming pool, Birney seemed uncomfortable with the symbolism of the swimming pool in Hollywood. "I'd just as soon fill it in," he said. "It's anther part of this L.A.-New York thing: The truth is, I'd rather live in Connecticut, but it just happens that my wife and I both work near Santa Monica."

PEOPLE: *Case of the Disappearing Paris Apartment*

Today's study in sociology comes from Le Monde: Mr. M. is a night taxi driver in Paris who sleeps during the day. One day recently, he was asleep in his apartment when Thierry Hanoune, a court's bailiff, arrived with a police officer, a locksmith and several movers to evict a woman who lives alone with her four children and had not paid the rent. Knocking on the door and receiving no reply, the locksmith removed the door and, under the eyes of the officer, the movers took out all the furniture, dishware, personal objects, odds and ends, in the apartment, marking everything with large red crayons. Having emptied it the gentlemen withdrew, clacking the door behind them. Only then did they realize that the number on the door was wrong, that they had not emptied the woman's apartment, but Mr. M's. As the locksmith had already left, the bailiff had the movers break the door down to return Mr. M's belongings. This noise woke up Mr. M., who is an unusually sound sleeper, and he was astonished to find that his apartment was empty.

The story came to light because Mr. M. sued. He has so far received nothing, however, because everything was legal. Including eviction of the woman with four children.

The winner of the 1976 Doublespeak Award, conferred by the National Council of Teachers of English, is the U.S. State Department. New York's Senator-elect Daniel Moynihan is the runner-up. The State Department was singled out as a result of its announcement that it would appoint a consumer affairs coordinator. The coordinator would "review existing mechanisms of consumer input, thruput and output, and seek ways of improving these linkages via the 'consumer communication channel'." The teachers also liked Moynihan's statement on "Face the Nation," after his resignation as the chief U.S. delegate to the United Nations. "I would consider it dishonorable to leave this post and run for any office, and I hope it would be understood that if I do, the people, the voters to whom I would present myself in such circumstances, would consider me as having said in ad-

TENDER NOTICE

Republic of the Philippines
Metropolitan Waterworks and Sewerage System
Manila Water Supply Project
Contract No. DM-1

INVITATION FOR PREQUALIFICATION TO BID

The Metropolitan Waterworks and Sewerage System, hereinafter called MWSS, expects to invite bids about February 1977, from prequalified contractors for the construction of New Ipo Dam, located on the Angat River near its confluence with the Ipo River, approximately seven (7) kilometres downstream from the Angat Hydroelectric Project at Ipo, Norzagaray, Bulacan, Philippines.

The work includes but is not limited to the following items:

1. Construct a concrete dam and tunnel intake structure (approximately 75,000 cubic metres of concrete) and connect the intake structure to existing tunnels by constructing a new tunnel approximately 120 m long and 5 m to 2.5 m in diameter.
2. Construct new access roads.
3. Modify an existing concrete aqueduct interconnection structure, and complete the concrete crown lining of approximately 6,000 m of an existing 2.2 m diameter tunnel.
4. Supply and install seven (7) spillway radial gates approximately 14 m wide X 12 m high, intake structure gates with manual operators, stoplogs for spillway, and intake structure trashracks and traveling screens.
5. Construct a 2.5 km, 34.5 kv transmission line. Supply and install related transformers and switchgear and a standby diesel generator.

The work will form part of a major program designated as the Manila Water Supply Project, currently being undertaken by MWSS, and funded in part by a loan from the Asian Development Bank. It is intended that a portion of the proceeds of this loan will be applied to payments of foreign currency costs under the Project. Prequalification is limited to bonafide Contractors of member countries of the Asian Development Bank and Luxembourg.

The engineer's preliminary total estimated cost for the work is approximately 150,000,000 pesos.

Prospective bidders must have extensive experience in the work involved.

Foreign Contractors, if they so wish, may form a joint venture with Philippine Contractors for the purpose of executing the work, and although not mandatory this is encouraged.

Prequalification questionnaires may be obtained from:

Project Management Office
Manila Water Supply Project
Metropolitan Waterworks and Sewerage System
Room 203, ITC Building
337 Buendia Avenue Extension
Makati, Metro Manila, Philippines.

Questionnaires must be completed in the English language and received by the project management office at the above address. Deadline for submittal of prequalification documents is 5:00 p.m., Manila time, 29 December, 1976. However, prospective bidders are enjoined to submit the prequalification statements earlier to facilitate their prequalification.

By 31 January, 1977, prequalified bidders will be selected and notified. On or after 31 January, 1977, contract documents will be made available to prequalified bidders on payment of the required fee.

Address all communications to "The General Manager, Metropolitan Waterworks and Sewerage System, Attention: Project Manager, at the above address or at P.O. Box 1,251, MCC Makati, Metro Manila, Philippines."

Telephone: 85-48-85 or 85-47-05.
Telex: 2.566 CDM PH.

Oscar I. Ilustre,
Acting General Manager.

ANNIVERSARY—Portrait of Gen. Francisco Franco is held aloft during Madrid rally a year after his death.

On First Anniversary of His Death

...ens of Thousands Attend Rally Honoring Franco in Madrid

By James M. Markham

...ADRID, Nov. 21 (NYT).—... of thousands of persons ...me right-wing militants, many ...nary middle-class Spaniards—...hered yesterday afternoon in ... Plaza de Oriente to pay ...mage to Generalissimo Fran... Franco, who died a year ago.

...he Caudillo had drawn far ...er crowds into the plaza. Those ... mustered yesterday shouted ...anco! Franco! Franco!" waved handkerchiefs, sang the Falangist anthem, "Cara al Sol" ("Face to the Sun"), and raised their arms in the flat-palm Fascist salute with considerable gusto.

At the Valley of the Fallen in the mountains west of Madrid, where Franco is buried in a cavernous mausoleum, King Juan Carlos and his queen, members of past and present Cabinets and the former dictator's widow, Carmen, attended a memorial mass.

The rally was convoked by the ultra-rightist Confederation of Civil War Veterans and, as a rival celebration to the low-keyed service in the Valley of the Fallen, was an implicit anti-government demonstration by the Franco faithful who feel that his legacy is being radically altered.

'Same Affection'

Whistles went up from some in the crowd when a passage in Franco's last testament, which was read over loudspeakers, urged Spaniards to give King Juan Carlos "the same affection and loyalty that you gave to me."

"Silence!" roared a voice over the loudspeaker at this apparent protest against the King, who has been the force behind a slow-moving democratization program.

The only speaker at the rally, Jose Antonio Giron, a crusty, former labor minister who heads the veterans association, urged loyalty to the "principles" of Jose Antonio Primo de Rivera, the founder of the Falangist party, which was absorbed by the Franco regime.

The prevailing mood was one of hostility toward the liberalizing forces that are dismantling the Franco past. "Attention, government, Spain will not surrender!" was a favored chant.

'The Red Press'

There was a notable scarcity of photographers at the rally, since most Madrid newspapers and magazines had received warnings from right-wing groups that their representatives would not be welcome. "Down with the Red press!" shouted a milling crowd when a foreign television crew was spotted filming from a rooftop.

After the rally officially broke up, several hundred red-bereted youths from the New Force, a neo-Fascist group, and a few older persons marched to the Puerta del Sol and cheered gray-uniformed policemen standing outside the National Police Headquarters. Several policemen and an army officer saluted rigidly when the band broke into "Cara al Sol."

A passing group of demonstrators demanded that the Spanish flag outside the police headquarters be lowered to half-staff, and, after what seemed to be consultations inside, two policemen climbed onto a balcony and did lower it, stirring a throaty cheer of "Viva la Policia!" from the plaza below.

In front of the Cortes (parliament), the youths ostentatiously turned their backs and gave the Fascist salute after denouncing the absent deputies as "traitors."

Last Thursday, the Cortes had approved a government reform bill that would put Spain on the road to parliamentary democracy.

"For Franco—against the reform," read a banner that was rolled up at the Cortes as the neo-Fascist group dispersed.

Panel Set On Aegean By Ankara And Athens

By Joe Alex Morris Jr.

ATHENS, Nov. 21.—Greece and Turkey have agreed to establish a joint commission on the legal aspects of their dispute over the Aegean Sea, which came close to war last summer, it was announced here yesterday.

The Greek government published a 10-point agreement to look into conflicting territorial and mineral claims in the sea. The Turks insist that the two nations must share the Aegean's continental shelf and the Greeks insist that Greek islands close to the Turkish coast make the sea, in effect, a Greek lake.

The possibility that oil may lie under the sea has sharpened the dispute. The Turks last summer sent a seismic research ship into waters claimed by Greece, provoking the most serious crisis between the two nations since the Turkish Army invaded Cyprus in 1974.

The new agreement, reached Nov. 11 in Bern, does not cover matters of substance. But it does appear to defuse the issue by referring it to legal experts.

Greek Interpretation

One clause also commits both sides to avoiding provocative action. Greek sources here interpret this to mean that the Turks will not send their seismic research vessel on any more exploration trips in the Aegean.

The talks in Bern followed a resolution by the United Nations Security Council in August that recommended negotiations leading to the delineation of the continental shelf. The issue is also pending before the International Court of Justice at The Hague, which gave the two countries until the end of next year in which to submit their proposals.

It was hoped here that the agreement would succeed in cooling off the dispute between two NATO allies, at least until after Turkish elections that are expected by next autumn.

No date has been set for the opening of negotiations.

President-elect Jimmy Carter and Secretary of State Henry Kissinger at meeting in Plains, Ga., Saturday.

Meeting in Plains

Kissinger Gives Long Briefing On Foreign Policy to Carter

By B. Drummond Ayres Jr.

PLAINS, Ga., Nov. 21 (NYT).—President-elect Jimmy Carter received a foreign policy briefing yesterday from Secretary of State Henry Kissinger, then assured other nations that "there will be a very smooth and orderly transition" from the Ford administration to the Carter administration.

Mr. Carter, who was frequently critical of Mr. Kissinger during the past election campaign, referred to the secretary yesterday as "my good friend" and said the briefing had been "a very helpful thing—a very good occasion."

'Peace and Progress'

"There is no incompatibility among us," the President-elect declared when he and Mr. Kissinger appeared before newsmen during a midday break in their six-hour meeting. Later he took the secretary on a tour of Plains, and told him, as tourists surged around: "You've put Plains on the map."

Mr. Kissinger said during the midday break that he would do his "utmost" to smooth the transition to the Carter administration "so that the new administration can be successful for the peace and progress of all Americans." Then, reiterating a position he has taken a number of times, the secretary added:

"I have always believed that foreign policy should be a nonpartisan affair and that all Americans should support the foreign policies in the United States."

Mr. Carter's sharpest outburst against Mr. Kissinger during the past election campaign came in a June speech in New York to the Foreign Policy Association. He charged the secretary with conducting a "secretive, Lone Ranger foreign policy—a one-man policy of international adventure."

Yesterday's briefing was the third last week for Mr. Carter. He met congressional leaders Wednesday and conferred Friday with George Bush, the CIA director. Vice-President-elect Walter Mondale was present for all of the briefings.

Syrians Go Into Ports Of Tripoli And Sidon

By James F. Clarity

BEIRUT, Nov. 21 (NYT).—The Syrian Army completed what is expected to be the final phase of its occupation operation in Lebanon today, taking control of the cities of Tripoli and Sidon and the highways leading from Beirut to the two Mediterranean port cities. There was no resistance.

With the control of Sidon, 25 miles south of the capital, and Tripoli, 60 miles north, the Syrians, acting as the deterrent force designated by Arab nations to end the 19-month civil war, now dominate the country except for a strip of land roughly 15 miles wide along the Israeli border in southern Lebanon.

Although civilians and Palestinian guerrillas in the port city of Tyre, 15 miles north of the Israeli border, said that they expected the Syrians to arrive, they had not by midafternoon, stopped their advance about three miles south of Sidon at the oil refinery near the town of Zahrani.

The conspicuous absence of Syrians in Tyre today was explained by the commander of the Palestinian guerrillas in the ancient port. The commander, Abou Kiwan, said he had been told the Syrians were coming, as well as a contingent of the Syrian-dominated Palestinian guerrilla group called as-Saiqa.

The commander, in a building with a commanding view of the port guarded by guerrillas with heavy machine guns, said that he thought few regular Syrian troops would come to Tyre because of its closeness to the Israeli border.

The commander said that he thought the "red line" that Israel has insisted Syrian troops must not cross in Lebanon was at a bridge crossing the Litani River about three miles north of Tyre, 18 miles north of Israel.

The guerrilla chief acknowledged that the Syrian absence left Christian rightist militiamen in control of a military security zone along most of the southern border, effectively separating the Palestinian guerrillas, now returning to the south, from the Israelis. There is a gap in the security zone of about 10 miles that is generally controlled by the guerrillas and leftist Lebanese forces.

Asked how the guerrillas expected to resume raids across the border against the Israelis while they are generally blocked on the south by the Lebanese rightists and controlled in the north by the Syrians, the commander said "that is up to Abou Amar," referring to Yassir Arafat, the Palestine Liberation Organization leader, by his nom de guerre.

Neither Israel nor Syria, as the occupation force representative of the other major Arab nations, is believed to want a military conflict along the Lebanese-Israeli border, as sentiment increases in Arab and Western capitals and in Moscow for a reconvening of the Geneva conference to seek an overall Middle East settlement.

In Lebanon, leftist leader Kamal Jumblat, whose militia was severely beaten by the Syrians in battles several weeks ago, has said that if Syria does not occupy southern Lebanon, the Jumblat forces will consider doing so. These forces were nowhere evident in the area between Sidon and Tyre today.

Western newsmen said the Syrian entry to Tripoli, where leftist and Palestinian forces had been surrounded for eight months by the rightist militiamen who control the surrounding countryside, was greeted with jubilation. Shots fired in the air to celebrate the arrival of the Syrians reportedly injured at least a dozen persons. Last night, the leftists in Tripoli and the rightists in the nearby hill town of Zghorta, the strong-

Support Grows as Biermann Sings on TV in 2 Germanys

BERLIN, Nov. 21 (AP).—Wolf Biermann sang his protest songs to both Germanys in a television broadcast Friday night as support for the banished singer grew within East Germany's intellectual and artistic community.

West German television aired a taping of Mr. Biermann's four-hour Cologne concert of Nov. 13, a concert cited by the East German government Tuesday when it barred his return to East Germany from a concert tour in West Germany.

The network said it was beaming the program across the border to give viewers there an opportunity to decide for themselves whether Mr. Biermann had slandered the East German Communist regime, as has been alleged.

[The East German press agency, ADN, said today that East Germany is considering closing the East Berlin office of a West German television channel in retaliation for showing the concert, Reuters reported.

[The agency said the Foreign Ministry was examining possible measures and that closing down the bureau was not being ruled out.]

Open Letter

According to information reaching West Berlin, 84 East German writers, actors and other artists and intellectuals have signed an open letter protesting Mr. Biermann's expulsion and loss of citizenship.

It was the first time in recent memory that East German intellectuals as a group publicly had protested a government action.

As the broadcast began, ADN ran a lengthy story saying "numerous" East German artists had written their professional organizations and the mass media in support of the Communist regime's decision.

The news agency confirmed the existence of the protest letter, however, saying one of the original 13 signers had recanted.

It was also reported that an East German writer, Juergen Fuchs, who signed a protest letter against his government's banishment of Mr. Biermann, has been arrested.

Mr. Fuchs was the first of the dissidents reported to have been taken into custody by authorities.

Physicist Robert Havemann of East Berlin told a West German television interviewer that Mr.

A Deal to Open Bolivia to the Pacific Ocean

LIMA, Nov. 21 (AP).—Peru's military government has formally proposed to Chile that the two nations cede a strip of land to Bolivia to link that landlocked nation's Andean altiplano with an outlet to the Pacific Ocean.

If accepted by Chile and Bolivia, the proposal could end almost a century of tension among the three nations over land administered and controlled by Chile since the war of the Pacific (1879-1883).

Peru proposed in a note to Chile's Foreign Ministry Friday night that the three nations share control of a strip of land north of Arica, Chile's northernmost port. The strip is now in Chilean hands.

8.5 Miles Wide

Peru would agree, the note said, to the ceding to Bolivia of a corridor, about 8 1/2 miles wide, that would extend from the proposed international coastal strip to present Bolivian territory. The corridor would run about two miles north of, and parallel to, the Arica-La Paz railroad line.

The international zone would extend to the sea from the Pan American Highway and would encompass the area from the city of Arica to the present Chilean-Peruvian border. Peru proposed that Chile, Bolivia and Peru share the administration of port activities at Arica.

Bolivia would also be allowed to build a port in the international zone north of Arica and would be granted sovereignty over its sea lanes into the Pacific.

There was no indication that Peru or Chile would ask for similar concessions of land from Bolivia.

Bolivia formally asked Chile for the corridor to the sea last December. Chile and Bolivia are believed to have made substantial progress toward a negotiated settlement of their rival claims.

Talks in Lima

Gen. Herman Brady Roche became the first Chilean defense minister to visit Peru in this century when he came to Lima recently for discussions with the government here.

There has been considerable speculation that Peru's President Francisco Morales Bermudez and Chile's President, Gen. Augusto Pinochet, might have a summit meeting in coming months, possibly to iron out a settlement.

Peru's message to Chile on Friday said that the Peruvian proposition is "designed to preserve the high interests of the nation, assure the specified rights that Peru has in Arica by virtue of international accords and to strengthen the uninterrupted socio-economic relationships between Tacna [Peru's southernmost town] and Arica."

Father, 63, Follows His Son as a Freshman At Harvard

By Edward B. Fiske

NEW YORK, Nov. 21 (NYT).—Harry Gersh is the second generation in his family to go to Harvard. The first was his son.

Mr. Gersh is 63 years old and, as far as can be determined, is the oldest student ever to enroll as a freshman at Harvard. Every weekday he takes a tennis tote that has been converted into a book bag and goes off to pursue a Harvard diploma with students at least 45 years his junior.

He does it in a way that would have made John Harvard proud. "When I retired, I decided that keeping my mind in shape would be more fulfilling than chasing a golf ball," he explained in a recent interview. "But I didn't want those mush courses that most schools serve up to older students. I thought the discipline of meeting the requirements for a regular degree would be a more worthwhile experience."

Mr. Gersh is a short, pleasant man who, with his beard, pipe, turtle neck shirt and sports coat, is usually assumed to be a professor. "The guards don't usually ask me for my ID," he said.

He was born in Philadelphia in 1912 and, shortly after graduation from high school, had to drop his studies to help support his family. He took courses at various times but never completed a college degree.

Books on Judaism

For more than four decades, Mr. Gersh worked as a reporter and editor, as speech writer for Averell Harriman, as information director for the New York State Department of Labor and, for 18 years until his retirement, as public relations director for Martin E. Segal Co., an actuarial concern in Manhattan. On the side he wrote more than 100 radio and television scripts, numerous magazine articles and nine books, mostly on Jewish religion and culture.

Mr. Gersh and his wife, Violet, lived in Tuckahoe, N.Y., where they raised their two children. Their son, John, went to Harvard but dropped out in 1968 in the spring of his senior year. He completed his studies elsewhere and now teaches electrical engineering at the U.S. Naval Academy. Their daughter, Ruth, a 1975 graduate of the University of Pennsylvania, is a graduate journalism student at the University of Michigan.

Two years ago, with his retirement approaching and the end of his children's education in sight, Mr. Gersh decided that he wanted to complete his own college degree.

'Scholarship Money'

Harvard agreed to accept him provided that he and his wife would find their own housing and that he wouldn't ask for financial help. "They thought that scholarship money should go to younger students," he said.

To help pay Harvard's $4,200 tuition, as well as other expenses, Mr. Gersh managed to negotiate a form of assistance that is not usually part of a financial aid package: a $10,000 grant from the Ford Foundation to write about his experience. "The guy is unusually lively and interesting," explained Peter de Jaensh of the foundation staff. "We thought he would provide some useful insights into the experiences of older students."

Mr. Gersh takes a normal Byzantine history, astronomy, freshman program consisting of linguistics and U.S. history. The only requirement he avoided was expository writing. "I thought this would be kind of stupid," he said. "Eventually they agreed."

Mr. Gersh has found that being an older student has its advantages. "There are certain things I know in history because I lived through them," he said.

But there are also disadvantages. Mr. Gersh says that he occasionally gets "absolutely lost" in his astronomy class because he learned his math so long ago. "The professor just assumes everyone knows how to

(Continued on Page 2. Col. 4)

Senators Back Iran Arms Bid

TEHRAN, Nov. 21 (Reuters).—The leader of a U.S. Senate delegation that ended a five-day visit here yesterday indicated that many of his colleagues favored continuing controversial U.S. arms sales to Iran.

Sen. Abraham Ribicoff, D-Conn., said most members of the 11-member delegation approved of the relationship between the United States and Iran, which he described as a steadfast and important friend.

He said at an airport news conference that Iran was the only country in the region that had the will and the ability to "really protect militarily the oil lifeline for the industrial survival of the West."

Almost a Shadow Government

Students Show a High Degree Of Control Over Soweto Life

By John F. Burns

JOHANNESBURG, Nov. 21 (NYT).—An elusive student group born amid the flames and gunfire of Soweto has emerged as the single most powerful group in that township—save for the police, who are busy jailing most of the student activists they find.

While the government reviews ways of giving blacks more control over their own communities, the student body—known as the Soweto Students' Representative Council—has become almost a shadow government in the sprawling enclave.

Recently, after months of close involvement in the anti-apartheid disorders that have killed more than 200 Soweto residents since June, the student group declared a period of mourning for the rest of the year.

In a community of more than a million persons, many of them hardened by the bloodshed and destruction, it was far from clear that an edict issued by a group of school students—many still in their teens, the oldest about 25—would have much impact.

Remarkable Respect

However, the results have been an impressive demonstration of the power the students wield. Whether out of fear of retribution or sympathy for the students' aims, township residents have shown a remarkable respect for their decisions.

A call for a weeklong work boycott earlier this month failed, with most of the township's 320,000 commuters to the city defying strike pamphlets circulated by the student group. Many said they couldn't afford to lose the pay.

In other respects, the students prevailed. At their behest, no taxis ran for a week. The township's *shebeens*, or illegal bars, closed indefinitely when the students accused their owners of perpetuating the subjugation of blacks.

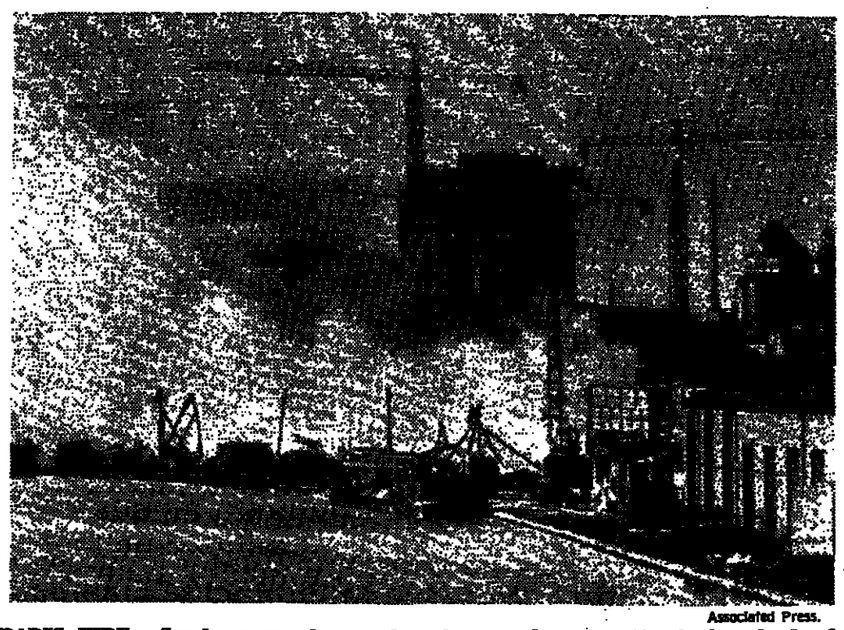
The students also decreed against Christmas shopping, cards, presents, parties and deliveries of luxury goods from Johannesburg's white-owned stores.

They also barred sports events, which are enormously popular in the township. After three weeks, a number of professional soccer teams, anxious to complete their schedule, sought permission to resume weekend play.

Last week, the student group, communicating its decisions through the press, sent word that the soccer was okay. Gilbert Sekhabi, director of the Kaiser Chiefs, a team that is bidding for the national championship, said:

"We are grateful to the students for salvaging us from a bad year and financial ruin."

At earlier stages of the five-month-old upheaval, the government concentrated on rounding up adherents of older established black groups, apparently believing that they were at the heart of the trouble. But now, with hundreds already in jail, the focus has switched to the students.



For the last two weeks, security police have been combing the black townships in the Johannesburg area, seizing scores of students from homes and classrooms, and off the streets. Hundreds of young persons have gone into hiding, and at least 600 have fled across the border into neighboring Botswana and Swaziland.

The new police chief in Soweto, Brig. Jan Visser, has insisted that the roundup is aimed at criminals, and is not politically motivated.

Meanwhile, police have said they are eager to talk to the new leader of the students' council, Khotso, Seatloho, 18. Mr. Seatloho, whose first name translates roughly as "peace," succeeded the first president of the group, Tsietsi Mashinini, 19, who fled to Botswana, and then to Britain, at the height of the disturbances.

Mr. Seatloho, like many adherents of the student group, is lying low. Brig. Visser has urged him to join in discussions aimed at returning life in the township to normal, but the student leader has told the police command, through messages in the press, that there can be no talks until all students are released.

Mr. Seatloho, in interviews, has insisted that he is committed to nonviolent change, citing the Rev. Dr. Martin Luther King jr. as a model.

Associated Press.

PARIS FIRE—Smoke pours from a burning warehouse in the Paris suburb of Pantin yesterday over barges anchored in the Seine. No injuries were reported.

U.S. Held Displeased by Projects

Jamaica's Cuban Link Yields Repercussions

KINGSTON, Jamaica, Nov. 21 (UPI).—A group of Cuban agricultural engineers recently presente dthe Jamaican government with six small dams, built by Jamaican workers under Cuban supervision, as a first step in combatting summer droughts.

The "microdam" project, with Cuban-trained Jamaicans scheduled to build 228 dams over the next four years, is only one aspect of a many-sided agreement between Havana and Kingston involving exchange programs in trade, education, health care, construction and tourism.

The agreement, slightly more than a year old, has provided Jamaica with technical assistance in a number of areas, but the political results of the pact has had a severe effect on international relations and could prove a decisive factor in coming general elections.

In strictly geographical terms, close ties between Kingston and Havana appeared natural and inevitable. Jamaica, about one-tenth as big as Cuba, lies only 90 miles from its neighbor. Both islands have sugar as a major export and both are prey to the same Caribbean climatic vicissitudes of drought, deluge and hurricane.

Defied OAS Sanctions

But it was not until 1972 that Jamaica, acting in concert with its British Commonwealth partners Guyana, Trinidad and Tobago, defied Organization of American States sanctions and opened full diplomatic ties with the government of Premier Fidel Castro.

Despite continuing cordial relations between Mr. Casto and Jamaica Prime Minister Michael Manley, close cooperation between the two governments did not begin until Mr. Manley's six-day official visit to Cuba in July, 1975.

The technical agreement that grew out of the trip is administered by a mixed commission.

Besides the "michodams," a Cuban construction brigade is currently helping to build 400 low-income housing units in the north coast town of Falmouth. The heavy equipment used in the pilot project will be donated to the Jamaican government and then is expected to be used to build 400 new units each year on various parts of the island.

The work will be performed by Jamaicans currently on one-year scholarships in Cuba to study construction trades. Jamaica expects this program to provide about 420 specialists by late next year.

School Is Gift

Some 200 Cuban construction workers are also building a 500-student agricultural secondary school at Twickenham Park, just outside Kingston. The school and the equipment to build it are gifts from the Cuban government.

In Westmoreland Parish, on Jamaica's southwest corner, a team of 13 Cuban doctors has started work on a model health care system to help reorganize Jamaica's medical services.

In return from Havana's aid, Jamaica is helping train Cubans in all phases of the tourist industry, including hotel management, publicity and marketing.

Efforts to expand trade under the agreement have been modest and largely one-sided, with Jamaica providing small quantities of various aluminum products in return for Cuban condensed milk. Besides Jamaica's aluminum, the two islands' basic export streng two islands' basic export strengths are identical.

The Cuban link has had far reaching political implications for Jamaica, but the results are not yet fully apparent. The United States early this year declared Kingston a diplomatic hardship post, a move sure to damage Jamaica's already fading image as prime tourism territory.

The State Department cited political violence and inadequate health care as reasons for its action, but many observers here saw it as an expression of displeasure over the Cuban ties.

Despite Washington's displeasure, the future of Kingston's Relations with Havana is likely to be decided in the fiercely partisan world of domestic Jamaican politics.

Mr. Manley declared a nationwide state of emergency in June during a spate of killings and street violence by gangs of gunmen loosely attached to his people's National party and the opposition Jamaica Labor party, but the emergency will not delay elections, which must be held before next June.

In the past, the PNP and JLP presented a decidedly "leftish" image based on both parties' lo association with organized labor. The JLP, drawing support from rural areas and among businessmen, was seen -- slightly more "pro-Western" than Mr. Manley's PNP, which has strong backing from urbe poor and ong in intellectuals.

The JLP, led by former Finance Minister Edward Seaga, is using the Cuban ties as a campai ploy, charging that Mr. Manley is trying to lead Jamaica into Communism. The JLP is seen as firmly pro-American, anti-Communist and anti-Castro, a stronger stance than in the past.

Mr. Manley, despite speeches denouncing imperialism, capitalism and multinational corporations, probably is not nearly as leftist as the opposition would like to paint him. Jamaica has been working hard in recent months to increase the flow of Western private investment to the island.

Land of Rich Mexico Families Is Expropriated for Peasants

(Continued from Page 1)

peasants belonging to a coalition known as the Ocampo Pact had set up improvised camps beside the land they were claiming, officially "to prevent alien peasants from invading our land," but, in actuality, to pressure the government and intimidate the farmers.

The peasants' claim to the land was based on a provision in the Agrarian Reform Law that no individual can own more than 100 hectares, or 220 acres, of irrigated land. The landowners responded that while families owned more than 100 hectares, individuals did not.

Legal Battle

With only three weeks of planting time left for the valuable winter wheat crop, it was feared that the entire season would be lost as farmers withdrew their machinery and refused to work their land. Rather than risk a prolonged legal battle, the President therefore decided to resort to expropriation, ordering the take-over of 37,667 hectares of irrigated land and 61,555 hectares of pasture land belonging to 74 families. This land is believed enough to benefit 8,944 peasants.

Before dawn last Friday, almost 100 officials and topographers from the Agrarian Reform Ministry arrived here by plane from Mexico City and began ordering the peasants to take possession of the land, adding that credit, seeds and machinery would soon arrive to help them plant the winter crops.

"When we remember the years of waiting, the imprisonment and killing of peasants, we know that this is an historic and transcendental moment that proves that the government is committed to the people," an official said.

The landowners were both angered and depressed by the decision. "The battle of Sonora is lost," a national business leader here said, "but we cannot lose the war against arbitrariness and illegality. We must fight on."

At a bitter meeting with the governor of the state of Sonora, Alejandro Carrillo, farmers and their representatives complained that the President "has destroyed 50 years of work with a stroke of a pen."

2 Germanys Back Singer

(Continued from Page 1)

Fuchs was riding in Mr. Havemann's car Friday when security agents stopped them, asked for identity papers and took Mr Fuchs away. He has not been heard from since, Mr. Havemann said.

Appeal for Support

Mr. Havemann himself is a dissident who has been banned from professional activity by the East German government for a decade.

Mr. Biermann, 40, introduced the TV special by telling East German viewers that support in East Germany was his only real hope of returning.

At a news conference earlier Friday in Cologne, Mr. Biermann said, "They [East German artists] are learning that it makes sense to intervene. I am completely convinced it won't be too long before I can return."

Mr. Biermann is a Communist, but his unorthodox stands, incorporated in satirical ballads, led the East German government 12 years ago to bar him from public performances in East Germany.

Because West Germany is not a Communist nation, he said at the news conference, he would not settle there if permanently blocked from re-entering East Berlin, where he left his wife and infant son.

Brezhnev Going to Romania In Flurry of Bloc Diplomacy

By Peter Osnos

MOSCOW, Nov. 21 (WP).—Soviet Communist party leader Leonid Brezhnev, who has just returned from Yugoslavia, travels to Bucharest this week for talks with Romanian leaders followed by a summit meeting of the Warsaw Pact, the first in 2 1/2 years.

The rush of activity appears to reflect Kremlin interest in solidifying long-standing ties in Eastern Europe rather than marking some major new initiative, analysts believe.

The Belgrade visit last week was essentially a reaffirmation of the status quo in Soviet-Yugoslav relations, acknowledging again Marshal Tito's right to go his own way. Nonetheless, given the record of strain between the two countries, the impetus provided by successful summit talks always seems to improve the tone of ties—even though it does not alter them structurally.

The talks with Romanian party chief Nicolae Ceausescu, which start tomorrow, may well provide the one substantive shift during the current round of consultations. After successfully asserting its differences with Moscow in the negotiations preceding the Helsinki security conference summit meeting last year and the East Berlin gathering of the heads of European Communist parties last summer, Romania seems to be emphasizing its Soviet connections again.

Zig-Zag Course

Rather than a fundamental overhaul of national policy, analysts believe that Mr. Ceausescu is continuing to pursue the zig-zag course of diplomacy among the Eastern, Western and Third World countries that has given Romania its special place on the international scene.

Welcoming Mr. Brezhnev to Bucharest and following up the visit with the first Warsaw Pact summit meeting there in 10 years is, as a diplomat here put it, "a sharp zag toward the Kremlin, but that does not mean there won't be more zigs."

Among the likely topics are the new leaderships in the United States and China, the troop reduction talks in Vienna and the possibility of establishing a permanent foreign ministers committee in the pact much like the one in the North Atlantic Treaty Organization.

The obstacle to establishing such a committee has been Romanian opposition over the years. Mr. Ceausescu has contended that the pact should be abolished—along with NATO—and that therefore establishing a major new committee would be a mistake.

Giving in on the committee issue may be Mr. Ceausescu's big concession to Mr. Brezhnev in their talks.

U.S.-Romania Trade Pact

BUCHAREST, Nov. 21 (AP).—U.S. Secretary of Commerce Elliot Richardson today signed a 10-year trade pact with Romania. The accord is described as the broadest agreement of its kind between the United States and an Eastern European country, including the Soviet Union.

"It's what we diplomats call an enabling document," a spokesman for the U.S. Embassy said. "It's committing neither side to anything, but it has language that is encouraging. It is a framework within which trade can grow."

The document was signed on the eve of Mr. Brezhnev's first visit to Romania since 1966. The embassy spokesman said the timing of Mr. Richardson's visit was coincidental.

"We decided on the dates several months ago," he said.

The U.S.-Romanian agreement is concerned with economic, industrial and technical cooperation, the embassy spokesman said.

Father, 63, At Harvard

(Continued from Page 1)

calculate the convergence of two stars," he said.

The biggest difficulties, though, come with linguistics, particularly the memorizing required. "I have no trouble with concepts and ideas, but there's a real difference between the young and the mature mind when it comes to memorizing."

Mr. Gersh has developed a somewhat different perspective on the academic world. "I came with a kind of visionary image of Harvard as a community of scholars," he recalled. "The reality is a little different. For example, the confusion quotient is quite high. I wanted to take one course, but when I showed up there were 100 people out in the hall unable to get in. Young people can live with chaos, but an older person finds it upsetting."

He also finds that the academic world is "a pre-adult environment."

"There's a lot of tittering in class," he said. "You know how television comedians learn how to get a laugh by saying things like 'Brooklyn.' Well, the professors do the same thing with circumlocutions for sex. I was in one class that was torn apart when the professor mistakenly said 'bed' instead of some other word."

Chile Will Terminate Leftists' Internal Exile

SANTIAGO, Nov. 21 (Reuters).—The Chilean government, which released 297 political prisoners last week, has announced that 198 political offenders exiled to various parts of the country will be allowed to return to their homes.

The exiles, most of them leftists detained after the military toppled the President Salvador Allende's regime in 1973, have been forced to live in areas specified by the government.

Palestinian Registers in Capital

PLO Seeks Washington Office For Lobbying With U.S. Aides

By Bernard Gwertzman

WASHINGTON, Nov. 21 (NYT).—The Palestine Liberation Organization has taken steps to open an office in Washington to lobby with U.S. officials and members of Congress and to disseminate information about the Palestinian cause.

The office, which was authorized by Yassir Arafat, the leader of the PLO, was registered formally with the Justice Department Thursday night by Sabri Elias Jiryis, a Palestinian-born PLO official described as a moderate. He said in a telephone conversation that he must complete other formalities before he will be able to publicly announce the opening of the office.

The very presence of Mr. Jiryis in Washington and the likelihood of a PLO office here is extremely sensitive for the State Department, which is aware of Israeli suspicions that the United States is looking for ways of modifying its policy of nonrecognition of the PLO.

State Department officials stressed that there was no change in the policy toward the PLO. The U.S. policy is that the government will not deal with that group in a substantive way until it accepts the existence of Israel as a sovereign state and the pertinent Security Council resolutions calling for a negotiated Middle East solution.

Sudanese Passport

Mr. Jiryis, who is a native of what is now Israel, entered this country a month ago with a Sudanese passport. The State Department knew he was coming and knew that he was a leading Palestinian intellectual who headed the Israel section of the PLO Research Center in Beirut. But officials said they had no idea he would seek to open an office here.

Because he was a member of the Palestinian National Council, the top Palestinian organization, Mr. Jiryis was denied any appointments with administration officials.

Under U.S. law, there is no prohibition against opening an office of some foreign government or group. All that is necessary is for an individual to register with the Justice Department as a foreign agent and to supply detailed information about his source of money and his intentions.

In addition, if he plans to deal with members of Congress, he must register on Capitol Hill and send a letter to the State Department announcing his intentions.

No Bar

State and Justice Department officials insisted that Mr. Jiryis's decision to open a PLO office was made after he arrived and that there was no law barring him from doing so.

Officials said, however, that when his current short-term visa expires and he applies for an extension to run the office, his request might be denied.

Mr. Jiryis, in the phone conversation, also said he had not detected any shift in policy by the United States toward the PLO and he confirmed that he had not been able to see any officials.

He added that the PLO had an office in Washington in 1965-66 and has had a similar office in New York since 1965.

In his registration with the Justice Department, Mr. Jiryis said he received $10,000 on Oct. 18 from the PLO headquarters in Beirut to organize an "information office in Washington."

He said he dealt with Mr. Arafat, whom he described as chairman of the Executive Committee of the PLO.

"Registrant has been and will continue to be engaged in organizing the Washington office of the PLO," he said. Mr. Jiryis "will act as director of that office and will meet with officials of agencies and departments of the Executive Branch of the U.S. government, members and staff of the Legislative Branch, members of the press and public, and with representatives of foreign governments" as part of his mission of "disseminating information concerning the PLO, its policies and objectives."

In an interview last year with Americans traveling in the Middle East that was published later in an Israeli magazine, Mr. Jiryis said while he "theoretically" supported the PLO's declared aim of a single, unified state to incorporate what is now Israel, he was in practice "against it."

"I would not like to see a single state now in Palestine," he said in the interview. Rather, he advocated the concept favored by Egypt and other moderate Arabs of giving the Palestinians a state on the West Bank of the Jordan River and in the Gaza Strip, both occupied by Israel. Israel, however, continues to oppose any separate Palestinian state and advocates a federated Jordanian-Palestinian state.

Richard Consults Crosland on State Of Geneva Talks

GENEVA, Nov. 21 (Reuters).—Ivor Richard, British chairman of the conference here on Rhodesia's constitutional future, conferred with Foreign Secretary Anthony Crosland in London today about the next step in the negotiations.

The talks have been deadlocked for almost three weeks on two black nationalists' demands for a British commitment to a date for legal independence in its breakaway colony.

A one-hour meeting yesterday with the two "hard line" black delegations proved as inconclusive as before, although Mr. Richard reported "some modest progress."

The two delegations' leaders, Robert Mugabe and Joshua Nkomo, insist that the date issue be settled before the conferees discuss the structure of an interim, multiracial government to guide Rhodesia to full independence and black-majority rule.

Peking Residents Put On Earthquake Alert

PEKING, Nov. 21 (Reuters).—Thousands of Peking residents carried beds and other belongings into the freezing streets tonight and waited for earth tremors after an official warning yesterday that two earthquakes were imminent.

Although residents were told to remain vigilant, mass evacuations were not ordered and the vast majority of Peking's 6 million inhabitants slept in their homes. But throughout the weekend, Chinese in east Peking and some other suburbs dug earth shelters or moved back into mud-walled huts they built after July's massive hearthquake.

Syria Agrees To Extend UN Golan Mandat

CAIRO, Nov. 21 (AP).—Syria has agreed to extend for six months the mandate of the UN peace-keeping force on the Syrian-Israeli front, according to an official statement read yesterday in Damascus radio broadcast monitored here.

Israel declared earlier that it was willing to extend the mandate, which would have expired Nov. 30.

UN forces have manned a buffer zone between Israeli and Syrian troops on the Golan Heights since June 1974. Most of the heights were captured by Israel in the 1967 war and its troops still occupy the areas they seized then.

In the past, Syria frequently stalled until the last minute on approving six-month extensions of the mandate, attaching conditions to the issue.

PLO Is Said to Plan Revision Of Policy on Israel Existen

BEIRUT, Nov. 21 (NYT).—The Palestine Liberation Organization is preparing to consider modifying its official policy of rejecting explicitly and categorically the establishment of a Palestinian state in exchange for recognition of Israel's right to exist permanently as a Jewish nation.

The possible policy change, which knowledgeable Palestinian officials here say is to be discussed in the coming weeks by Yassir Arafat, the head of the PLO, and the heads of other Palestinian groups, would not explicitly recognize Israel's right to exist as a state.

But the tentative change, the officials say, would mean acceptance in principle, and possibly in practice, of the establishment of a Palestinian "entity" as an interim state on the West Bank of the Jordan River and the Gaza Strip, now occupied by Israel.

Long-Range Objective

The shift, the officials add, could be embodied in a restatement of policy dealing obliquely with the question of Israel's continued existence, without explicitly abandoning the present long-range objective of creating a Palestinian state that encompasses what is now Israel.

"It would be a matter of nuance," said an official of the possible change. "A minor compromise."

The officials note that the tentative policy change would have to be approved by the Palestine National Council, the 150-member body serving as a sort of parliament, at its expected meeting in Cairo late next month.

The possibility that the PLO might modify one of its basic policies, however slightly, was seen here as potentially significant as it would reflect a new and more positive attitude of the organization toward a negotiated settlement of the Middle East conflict.

The officials caution that the National Council could reject any policy change. Current policy is that the PLO would not accept the creation of any Palestinian entity if this meant recognizing the borders of Israel as final and abandoning the objective of a secular Palestinian state encompassing the present land of Israel to which all Palestinians could return.

The possibility for change in the PLO policy, the officials say, has been brought about by pressure from Arab nations—particularly Egypt, Saudi Arabia and Syria—for a new round of negotiations to settle Arab-Israeli disputes and to dispose of the question of a Palestinian state.

The officials concede that this attitude of major Arab nations, combined with the weakened position of the Palestinians as a result of the Lebanese civil war, is forcing the Palestinian leadership to reappraise its policies. It is preparing to unify its factions in the face of expected pressure to accept a new round of negotiations, probably in the framework of the Geneva conference on the Middle East, in the next six months.

The officials emphasize, however, that they do not believe Israel is prepared in the future to give up the territory long proposed as the possible site for a Palestinian state—the West Bank and the Gaza strip.

Mr. Arafat is believed to be the principal proponent of modifying policy in preparation for a new round of Middle East negotiations.

Syrian Units Enter Ports

(Continued from Page 1)

hold of former President Sulei Franjieh, exchanged artillery.

In Sidon, where the Syrians met heavy resistance and lost at least 12 tanks last June when they tried to storm the leftist-held city, the reception was friendly but not wildly enthusiastic. A Syrian tank was parked in Gamal Abdel Nasser Square in the center of the city and at least 20 armored personnel carriers with machine guns and artillery were posted elsewhere around the port town.

Trucks and jeeps belonging to Palestinian guerrilla groups and factions of the old Lebanese army that had joined the leftists moved about the town with apparent impunity, but there were no armed men in the streets of Sidon or Tyre.

In a nationwide radio and television speech tonight, on the eve of Lebanon's celebration of the 33rd year of its independence from France 33 years ago, President Elias Sarkis said: "The Arab peace-keeping force is doing its duty in the various Lebanese provinces and has imposed security wherever it has been deployed with the cooperation of all sides."

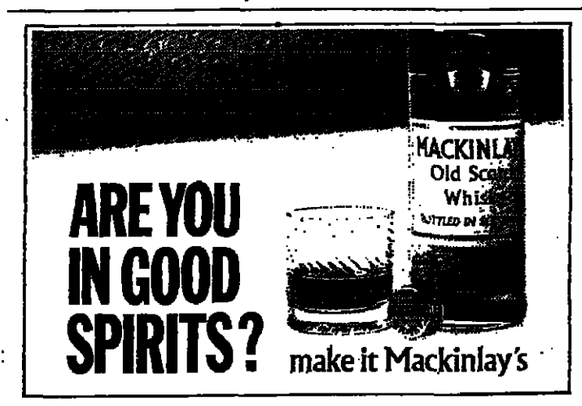
The President's speech, which was recorded yesterday before the Syrian operation began this morning, added that "we are clinging to security even more than to bread. We shall not allow insecurity to be disregarded, for it is our first issue."

The President spoke generally of efforts he will make to help in the reconstruction of Lebanon, which needed assistance from the rest of the world and that he would have great hope that they will hasten to our aid.

"We shall move fast, firmly and wisely," he said, "our energetic diplomacy and our emigrants' businesses will convey an image of the new Lebanon." The President also said he would work to establish a new political formula under which the Christian and Moslem populations of the nation could live peacefully together, but gave no details.

Coastal Resort Shelled

TEL AVIV, Nov. 21 (UPI).—Palestinian gunners today shelled the Israeli coastal resort of Nahariya from southern Lebanon in the first such attack on a civilian target in more than [illegible] months.



It came as Defense Minister Shimon Peres warned that Israel would not allow a hostile force—Syrian or Palestinian—to occupy the region and use it to stage attacks on the Jewish state.

Witnesses said a number of Katyusha rockets fell outside the town of 30,000 and there were no injuries. One building was damaged.

The last rocket attack came on March 10, on the agricultural settlement of Adamit, but the border has been relatively quiet for more than a year, as Palestinian forces concentrated on the fighting in Beirut.

Egypt Embassy Bombed

ROME, Nov. 21 (Reuter).—A homemade bomb exploded outside the Egyptian Embassy to the Vatican over the weekend, causing slight damage to the outside of the building, police said.

Immediate Default Unlikely

New York City's Moratorium on Debt Held Unconstitutional

By Jack Egan and William Clairborne

NEW YORK, Nov. 21 (WP).—The Court of Appeals, New York State's highest tribunal, has ruled that a moratorium imposed last year on repayment of more than $1 billion in New York City debt notes is unconstitutional. The ruling throws the finances of the nation's most famous city into jeopardy again. The three-year repayment moratorium was enacted by the State Legislature last November as a key element in a complex plan to ward off default by the city. The moratorium had been urged by Treasury Secretary William Simon as a prerequisite for federal assistance, which was finally granted in the form of a three-year, $2.3-billion loan to deal with cash-flow problems.

Friday's 5-1 decision by the court in Albany did not put New York City in immediate danger of defaulting because the bench ordered that a repayment plan be drawn up first. A court spokesman said a final order would not be handed down until "well into next year."

$1 Billion Needed

But the ruling means that the city must come up with an additional $1 billion in new, outside financing or again face bankruptcy.

Gov. Hugh Carey, after a hurried top-level meeting in his mid-Manhattan offices to study the decision, said he had talked on the telephone with Mr. Simon and the Treasury secretary had assured him that further federal loans under the current plan would still be forthcoming.

"At this moment [New York City] is not in danger," the governor said. "It would be in danger if the demand loans were called, but we have the assurances of the Treasury secretary that they won't."

Mr. Carey said this was not "a cause of great alarm, but an adverse decision of the courts." He said the decision would not be appealed, but that meetings of city, state and federal officials would be held in coming weeks to decide how to cope with this latest problem in New York City's fiscal situation.

The governor said he believed that if worse came to worse, "further federal loans to complete" New York City's three-year financial retrenchment plan "will be forthcoming."

Progress Is Cited

He said these expectations were based on the progress the city has made in the last year. He also indicated that he had received assurances at a meeting of northeast area governors last weekend of "the political backing of President-elected Carter" in dealing with the city's crisis.

During his election campaign Jimmy Carter expressed sympathy toward proposals to ease the severity of New York City's recovery plan but made no specific commitments of federal backing. A request for more dollars from Washington will probably not be made until Mr. Carter takes office in January and a new Congress convenes.

It was not clear Friday night what the ruling meant for individuals and institutions that had exchanged the city's notes for long-term bonds of the Municipal Assistance Corp., which was set up to ease the city's crisis. The MAC's chairman, Felix Rohatgn, said that "any number of alternatives" were available for dealing with the new crisis, and that officials "had given some thought to an adverse decision and have some ideas." He refused to be specific.

English Judge Orders Girl to Get Religion

LEEDS, England, Nov. 21 (Reuters).—A judge has postponed a trial here until a 7-year-old girl can learn about God.

Karen Whelan was called to give evidence Friday against a man accused of wounding and assaulting her 2-year-old brother.

But the judge discovered she knew nothing about God. He ruled that she could not take the oath and he postponed the trial for a week while she was given instruction.

Unesco Seeking To Aid 3d World On News Media

NAIROBI, Nov. 21 (UPI).—The United Nations Educational, Scientific and Cultural Organization is expected to approve proposals to curtail traditional Western dominance of international news flow and create a new global information order, delegates said here today.

A working commission at the organization's general conference began debate on proposals introduced by Tunisia to create a more balanced flow of information between developed and developing countries—in effect, curtailing Western dominance in the field. The proposals, endorsed by a wide range of countries, including the United States, seek to strengthen news agencies and journalists groups in Third World countries and end discrepancies in international tariffs for transmitting news.

They also approved studies to determine possible dangers to Third World countries resulting from dependence on "transnational corporations, including Western news agencies, for information."

Shift on Angola Is Laid to U.S. Africa Priorities

UNITED NATIONS N.Y., Nov. 21 (AP).—The United States decided not to block Angola's second attempt at UN membership in order to increase U.S. influence in black Africa and avoid damaging the stalled Geneva talks on Rhodesia, diplomats said.

U.S. representative Albert Sherer jr. told the 15-member Security Council on Friday that while the United States will not support Angola's application, it will not stand in the way."

This indicated a U.S. abstention when the Council votes tomorrow. China has indicated it would not vote to protest Soviet involvement in Angola, but the Council's 13 other members were expected to aprove Angola's admission.

The United States has said in June that it would bar Angola from the United Nations as long as large numbers of Cuban troops remained in the country. U.S. sources said Friday there 12,000 Cubans are still there, and renewed fighting has been reported recently with remnants of the pro-Western factions.

But, in a major policy shift, officials said Friday that the United States was reconsidering its opposition because of a wider African context.

Carter, Black Attend Church

PLAINS, Ga., Nov. 21 (AP).—President-elect Jimmy Carter and the Rev. Clennon King attended services today at the Plains Baptist Church a week after the congregation voted to allow Mr. King membership.

Mr. King, the black minister whose attempts to integrate the church led to its racial policies being brought into the open, said softly, "Praise the Lord" as he entered the church, and took a seat in a front pew.

After the services, Mr. Carter approached Mr. King and the minister from Albany, Ga., 60 miles away, bowed to the President-elect. Witnesses said he kissed Mr. Carter's hand.

Policy Shift, Interservice Rivalry Involved

Air Defense Plans Stir a Pentagon Dispute

By John W. Finney

WASHINGTON, Nov. 21 (NYT).—The Air Force is embarking on a $25-billion program to modernize and probably enlarge an anti-bomber air defense system that the Defense Department has contended is of little military value in an era of intercontinental ballistic missiles.

The proposed Air Force budget for the next fiscal year is expected to request a $30-million down payment on a six-year plan to buy 170 new interceptors for the air defense system. The Air Force has placed a $2.5-billion price tag on the modernization program, but Pentagon officials expect the cost to go much higher, particularly if the Air Force carries out long-range plans for expanding the size and role of the Air Defense Command.

Ostensibly, the modernization program is being undertaken to replace the aging interceptors now being used in the Air Force. Officers acknowledge, however, that the program represents a subtle yet significant shift away from the Defense Department policy of de-emphasizing the need for an air defense system.

James Schlesinger, then the defense secretary, proclaimed the policy in 1974, saying: "Air defenses are of very limited value against potential aggressors armed with strategic missiles."

'Nothing to Be Gained'

Noting that under the 1972 anti-ballistic-missile treaty the United States and the Soviet Union had renounced the large-scale deployment of defenses against ballistic missiles, Mr. Schlesinger said: "There is nothing to be gained by trying to defend them against a relatively small force of Soviet bombers."

The policy was reiterated earlier this year by Defense Secretary Donald Rumsfeld, who said: "Because of the ABM treaty, the Defense Department will continue to reduce its emphasis on actively defending the continental United States against an all-out strategic attack."

"A major anti-bomber defense of continental United States without a comparable anti-missile defense, in an era of massive missile threats, would not be a sound use of resources," Mr. Rumsfeld said. But he held out the possible need for a "follow-on interceptor" to replace the 20-year-old F-106s.

At Defense Department direction, the air defense system was reduced to the role of providing peacetime surveillance over the nation's air space, ready to deny an intruder what Mr. Schlesinger had described as a "free ride."

Under the 1974 policy decision, the air defense system was largely dismantled. The number of interceptor squadrons was reduced to 12—6 in the active Air Force and 6 in the Air National Guard—and the Army's elaborate network of Nike Hercules anti-aircraft missiles was closed down.

Gone Too Far

High-ranking Air Force generals have made it clear in recent interviews that they believe the dismantling process has gone too far and that the time has come to start rebuilding the air defense system.

The first priority has been placed upon modernizing the interceptor force, but beyond that the Air Force is thinking in terms of enlarging the air defense system, although probably not to the leve's that prevailed before 1974.

To a certain extent Air Force thinking has been influenced by the advent of the Soviet Backfire bomber, which is also being cited by the Army and Navy to justify multibillion-dollar weapons programs.

There is a continuing controversy over the intended role as well as the range of the new Soviet bomber. It is generally agreed in military and intelligence circles that the plane was designed for a "peripheral role"—to attack targets in Western Europe and China as well as naval forces approaching the Soviet Union.

The Air Force contends, however, that the bomber, with a range of at least 3,500 miles could be used for attacking the United States, and there have been recent suggestions from military intelligence sources that the Soviet Union is developing a tanker plane for refueling the bomber, thus extending its range.

The Air Force is also advancing an expanded role for its Air Defense Command in providing protection over sea routes, such as against Backfire bombers launching air-to-surface missiles at shipping.

In pushing such a maritime role, the Air Force risks a jurisdictional clash with the Navy which justifies its expensive carrier force largely on the need to provide air cover for the navies and shipping fleets of the United States and its allies.

Another potential interservice conflict could arise over the question of whether the Air Force's F-15 fighter or the Navy's F-14 fighter is chosen as the new interceptor.

A top Air Force general has acknowledged that the F-14 would probably be a better air defense interceptor than the F-15, which has already been introduced into the Tactical Air Command. With its Phoenix weapon system, the F-14 can track 24 targets, including air-to-surface missiles, and fire simultaneously at six targets. With its four Sparrow missiles, the F-15 can handle two bombers—but not simultaneously—and it has no capability against the type of missiles that might be launched by a Backfire bomber.

As a matter of cost, however, the Air Force has concluded that it would be cheaper to use the F-15 as its new interceptor. Not only is the F-15 about $4 million cheaper than the $20-million F-14, but the Air Force contends that it would be spared the additional cost of supporting a new type of aircraft in its inventory.

If the Air Force persists in backing the F-15 for use as the new interceptor, it could set off a political struggle on Capitol Hill between the competing plane manufacturers, the McDonnell Douglas Corp. and the Grumman Aerospace Corp.

U.S., Russia Suspending SALT Until Inauguration of Carter

WASHINGTON, Nov. 21 (NYT).—The United States and the Soviet Union have agreed to suspend their negotiations for a treaty curbing long-range bombers and offensive missiles until after Jimmy Carter assumes office.

A formal announcement of the indefinite adjournement of the four-year-old Geneva negotiations was made after the final session yesterday in the current round of negotiations.

About 90 per cent of the Strategic Arms Limitation Treaty (SALT) has been completed, officials said, including some details worked out in the two weeks since the Nov. 2 election.

But the crucial issues that have separated the two sides for the past year and a half—the 10 per cent left—will require high-level political decisions to solve, and the Ford administration has decided not to preempt the Carter administrations' options, officials said.

In addition, the Soviet Union made it clear that it saw no point in continuing negotiations with a lame duck administration since Mr. Carter—and not Mr. Ford—would have to defend any treaty agreed upon when it was submitted for Senate ratification.

So far, the Soviet and U.S. sides have concurred on about 20 pages of text, an official said. The current negotiations are based on the framework agreed upon in Vladivostok in November, 1974, by President Ford and Leonid Brezhnev, the Soviet Communist party leader.

At Vladivostok, Mr. Ford and Mr. Brezhnev agreed that in the treaty, each side's arsenal would be limited to a total of 2,400 long-range, nuclear-armed missile launchers and heavy bombers.

Of that total, each side could have 1,320 missile launchers armed with multiple warheads that could be independently targeted, known as MIRV.

Bonn Party Asks Restraint in New A-Plant Building

FRANKFURT, Nov. 21 (Reuters).—The Free Democratic party, the liberal junior partner in the ruling coalition, last night called for restraint in West Germany's construction program for nuclear power stations.

The two-day annual conference of the FDP put pressure on Economics Minister Hans Friderichs and Interior Minister Werner Maihofer, both members of the party, to cut back on the program.

There has been growing public concern over what is to happen to the large quantities of radioactive waste from the dozens of planned nuclear stations.

A resolution at the FDP conference urged their government to establish only as many atomic power stations as were absolutely required for the country's economy.

In other conference action, Foreign Minister Hans-Dietrich Genscher was re-elected party leader.

Enrichment Plant Set

JUELICH, West Germany, Nov. 2 (AP).—Uranit Corp. has said that it would build a 1-billion-mark ($400-million) uranium enrichment plant at one of four possible sites in West Germany.

The installation, which is to be in operation by the mid-1980s, would be the first enrichment plant in West Germany.

First Yugoslav Snow

BELGRADE, Nov. 21 (Reuters).—The first heavy snow of the winter made driving hazardous in many parts of Yugoslavia yesterday.

World Body Approves Los Angeles Fair in '81

PARIS, Nov. 21 (UPI).—Los Angeles has received approval from the Bureau of International Expositions to stage a world's fair in 1981 and a U.S. Commerce Department spokesman said President Ford is expected to grant the necessary authorization.

René Chalon, director of the Paris-based bureau, said that its approval was voted after delegations from 25 countries last week considered Los Angeles's request to hold an exposition at which participating nations must agree to construct pavilions. The exposition would be held in Ontario, near Los Angeles.

On a 'Friend-to-Friend' Basis

U.S. Aides Reportedly Helped Korea Lobbyists

By James P. Sterba

SEOUL, Nov. 21 (NYT).—Officials of the Nixon administration not only failed to curb South Korean lobbying activities in the United States but also regularly provided informal guidance for those efforts, according to several Korean politicians and U.S. diplomats here.

Korean sources also said that they had sought and received advice from U.S. Embassy and military officials here, and from Nixon administration aides in Washington, on which members of Congress and candidates to invite to Korea and how to handle congressmen considered to be "problems" for South Korea.

U.S. and Korean sources also said that United States officials here had received reports from American companies of efforts by the Park Chung Hee government to extort money from them for doing business in South Korea.

In some cases, U.S. companies sought informal guidance from economic counselors at the embassy on what to do about requests from Korean officials for "contributions" and kickbacks. It could not be learned what advice the embassy officials offered or whether they made reports of such requests to the State Department in Washington.

'Guidance' Provided

How highly placed the administration aides were and the number allegedly involved in providing the "guidance" could not be determined. Several Korean sources said that they had received advice, not through official channels but on an informal, "friend-to-friend" basis.

However, three Korean sources who previously lived in Washington and maintain knowledgeable U.S. contacts in Seoul, said that South Korean and U.S. Embassy officials here closely coordinated "programs" for visiting members of Congress.

Korean sources said they understood that U.S. Embassy personnel had conducted "pro-Korean" briefings for visiting U.S. officials. Further, these sources said Korean officials provided access to the country's top leaders as well as entertainment, and that some U.S. military officials gave "the hard sell" for maintaining a large U.S. troop commitment here.

U.S. embassies customarily provide informal guidance to foreigners on how to do political and financial business with the United States. But United States involvement with the South Korea lobby has taken on special significance because of the lobby's widespread nature and scope, and questions about the propriety and legality of the Korean activities have prompted a Justice Department investigation.

Melvin Laird, former secretary of defense, acknowledged recently that he had known about the Korean lobby in Washington since 1970 and had advised the State Department to be wary of it. A State Department official said privately, "Everyone around here knew what was going on. The wonder of it was that it took so long to come out."

Officially, State Department spokesmen have said that they referred all allegations of wrongdoing to the Justice Department. Spokesmen for that department have declined to comment because officials there are presenting evidence to a federal grand jury and do not want to jeopardize their case by commenting publicly.

The reports in Seoul about U.S. guidance for Korean interests closely follow disclosures in Washington that Nixon administration officials had done little to curb improper Korean lobbying activities because they did not want to jeopardize Korea's commitment of 52,000 troops to Vietnam.

Donald Ranard, director of the Office of Korean Affairs in the State Department from 1970 through 1974, said this month in an interview (IHT, Nov. 15) that nothing was ever done about the Korean lobby because "we were in a position where we thought we needed them in Vietnam."

Seoul Reports

The Seoul reports also seem to confirm information obtained in Washington that President Park and other senior South Korean officials conceived, organized and directed an improper effort to influence U.S. policy toward their country.

South Korean officials have denied that Mr. Park, through the Korean Central Intelligence Agency, directed a blunt campaign of bribery and influence peddling, but they declined to be interviewed on specific charges.

The U.S. Embassy in Seoul has issued a series of "no comments" on the subject, and its officials have declined to discuss it even unofficially, although a few embassy sources did talk privately about some aspects of the matter.

Several Korean politicians and diplomats, Korean and U.S. businessmen and other Americans here were willing to discuss various operations of Mr. Park's office only if their names were not printed.

Korean Boasts

Two South Korean lawmakers said that some Koreans in Washington boasted about their access to the Nixon White House. They said, for example, that a Korean named Ro Chin Hwan told them about going to the White House in 1974 and asking for and receiving a list of congressmen favored by Mr. Nixon for re-election. These sources said that they did not know who in the White House provided the list.

However, in a letter dated April 28, 1976, Robert McCloskey, an assistant secretary of state, told Rep. Donald Frazer, D-Minn., that in 1974 Mr. Ro approached John Nidecker, a deputy special assistant to President Nixon, and offered to make political contributions.

The letter said, however, that Mr. Ro was advised against making such contributions. The letter did not say whether Mr. Nidecker had given Mr. Ro a list of favored congressmen.

Mr. Nidecker was the Nixon aide who also in 1974 was handed an envelope containing $10,000 in $100 bills by President Park's personal security director, Park Chong Kyu. Mr. Nidecker handed the envelope to Ambassador Philip Habib, and the money was returned.

B-1 Manufacturer Agrees to Await Carter Decision

WASHINGTON, Nov. 21 (AP).—The Pentagon says the prime contractor for the B-1 bomber has agreed to wait until June for a decision on whether full funding of the plane will be authorized.

The move is seen as an effort by the Air Force to avoid confronting Jimmy Carter with the necessity of making an early decision on the B-1 after he becomes president on Jan. 20. Mr. Carter said before his election that he opposed production of the bomber now but his position might change.

Pentagon officials said Friday that Rockwell International Corp. will settle for the current level of funding, $87 million a month, through May 31.

Congress earlier this year limited the B-1 funding to $87 million monthly through Feb. 1, to give the White House until then to make a decision.

Pentagon officials said that the absence of an agreement on the price of the bomber forced postponement Friday of a meeting by a Defense Department panel considering whether to recommend full production of the B-1. The latest cost estimate on the bombers is $22 9 billion for 244 planes.

Killer Bees in Guyana

GEORGETOWN, Guyana, Nov. 21 (Reuters).—Killer bees spreading throughout South America from Brazil have reached Guyana's Atlantic coast, according to press reports here.

Sees Threat to Patents

U.S. Drug Industry Balks At 'Creation of Life' Rules

By Victor Cohn

WASHINGTON, Nov. 21.—Drug and chemical industry officials have told the government that they cannot accept its new rules on creating new forms of life in their laboratories unless they can keep their research secret long enough to patent it.

Officers of 17 firms, including Dow Chemical, Du Pont, Merck and Upjohn, and three trade associations met Friday at the Commerce Department as the first step in a joint government-industry effort to agree on rules by which companies may safely participate in biology's newest revolution.

The meeting, according to its chairman, Dr. Betsy Ancker-Johnson, assistant secretary of commerce for science and technology, is "analogous in importance" to the post-World War II effort to let U.S. industry into the atomic energy business.

There is no creation-of-life business yet. Much of the research is just beginning. But it is conceivable, Dr. Ancker-Johnson said, that the development of atomic energy and the creation of new forms of life "will rank as the most important discoveries of this century."

This coming biological revolution may see scientists combining the deoxyribonucleic acid (DNA) or genetic material from different life forms like bacteria, viruses, plants and even animals to create new living molecules or new biological products like hormones or blood elements.

Developments Feared

The revolution could lead to new drugs and plants, but it also, many scientists believe, could create terrible new forms of destruction unless the research is limited and closely watched.

The unknown hazards led scientists working in the field to call in June, 1974, for a voluntary *moratorium on all such work* until rules could be developed. After two years of intense debate, the National Institutes of Health (NIH) in June issued strict guidelines to govern scientists in NIH and university laboratories.

Dr. Donald Fredrickson, HIH director, briefed industry representatives on the guidelines in June, and in September he told the Senate health subcommittee that it was "urgent" for industry also to comply with the guidelines.

Joseph Stetler, president of the Pharmaceutical Manufacturers Association, told the subcommittee that the drug industry would comply voluntarily, except for minor exceptions.

Friday, however, drug, chemical and trade association officials arrived at what Dr. Ancker-Johnson described as a "consensus" that some important changes in the guidelines are needed. They asked for a system under which they could be required to register to do such research, but not forced to comply with safety rules, although the officials said they would do so voluntarily.

They also asked that they be able to keep the exact nature of their research and the organisms they are working with secret until they seek patents. Under the NIH guidelines, university scientists must disclose all their plans.

"If you disclose your research plans, you lose the right to a patent," said Dr. Jerome Birnbaum, executive director of Merck, Sharp and Dohm Research Laboratories.

Portugal to Clear Hotels of Settlers

LISBON, Nov. 21 (Reuters).—The Socialist government yesterday said it was no longer willing to foot enormous hotel bills for settlers returning from Portugal's former colonies.

About 800,000 returning settlers, or "retornados," entered Portugal last year, most of them homeless and destitute.

A government statement said it was costing 30 million escudos (about $630,000) a day to keep the refugees in hotels. Those occupying four-star and five-star hotels were given until the end of the year to leave. The government said all hotels must be cleared of "retornados" by next September. An estimated 30,000 former settlers are occupying hotels.

Poland Party Parley

WARSAW, Nov. 21 (Reuters).—Poland's Communist party leadership will meet Dec. 1 to discuss revised five-year plan figures aimed at trimming back industrial production and boosting agriculture, a government spokesman said.

United Press International.

Obituaries

Rev. Martin Cyril d'Arcy, 88, Renowned Jesuit Philosopher

LONDON, Nov. 21 (UPI).—The Rev. Martin Cyril d'Arcy, 88, an English Jesuit with a worldwide reputation as a philosopher and author, died today after a brief illness.

Father d'Arcy was the leader of English Jesuits from 1945 to 1950, but his influence spread far beyond London's Jesuit headquarters, where he lived.

He lectured regularly in the United States from 1956 until the early 1970s. He also lectured in Hong Kong, India and Japan, and his books—more than 18 published between 1926 and 1971—circulated throughout the world. He was named an honorary member of the American Academy of Arts and Sciences.

Father d'Arcy was one of the first to try to reach Britain's intellectual community with the message of Roman Catholicism. He was instrumental in converting such intellectuals as author Graham Greene to the Catholic faith.

A native of Bath, England, he joined the Society of Jesus in 1906. He took degrees in philosophy and, at Oxford, in the classics. He was master of Oxford's Campion Hall from 1933 to 1945.

'Best Talk in England'

During his mastership it was said that "the best talk in England" was at Campion Hil. His presence attarcted visits by leading philosophers, politicians, historians an dpoets. The scholar-priest was also an influential patron of artists.

Most of Father d'Arcy's early books were on Catholic topics, but from the mid-1930s they ranged widely. They included "Communism and Christianity," "facing the people" and "facing the Truth." Perhaps his best known books were "The Mind and Heart of Love," written in 1945, and "The Sense of History, Secular and Sacred," which came out in 1959.

Bohemian artist Augustus John did Father d'Arcy's portrait, showing him as a thin, almost emaciated figure with finely chiseled features and silvery hair.

Father d'Arcy entered a hospital for tests and treatment early this year.

Klara Rotschild

BUDAPEST, Nov. 21 (Reuters).—Klara Rotschild, 74, Eastern Europe's best-known designer of haute-couture fashion, has died here "under tragic circumstances"—a phrase normally used in Hungary to indicate suicide—her family reported. She was said to have a painful infection of her jaw.

Miss Rotschild, who built her reputation here and in Paris before World War II, was awarded the Order of Labor when she retired in the early 1970s.

In the 1960s, Hungarian authorities had recognized the potential of her skills for earning Western hard currency, and she was put in charge of 2 state-owned Budapest salon, which operated under her name. One of her most prominent customers and a personal friend was Yugoslav President Tito's wife, Jovanka.

Henri Massot

PARIS, Nov. 21 (Reuters).—Henry Massot, 73, former director-general of the daily newspaper France-Soir, died here Friday, members of his family said.

Mr. Massot held key positions at Paris-Press, which he founded after World War II, and at the French news agency, Agence France-Presse. He became director-general of France-Soir in 1965 and retired last year.

U.S. Blue Chip Real Estate Sold at Auction

By Robert Lindsey

HOUSTON, Nov. 21 (NYT).—A city block in San Diego, price: $19 million. A 9,477-acre ranch, complete with two mansions, two lakes and an airport, near Fort Worth, Texas, price: $3.5 million. A 2,025-acre "new town" with homes, school and an automobile assembly plant, in Chesapeake, Va.—Make offer.

These and other properties with an asking price totaling $1.2 billion were put on the block here last week at a first-of-its-kind sale in an effort to create a centralized marketplace for high-priced real estate.

The setting was the ballroom of Houston's posh River Oaks Country Club. Under three huge glittering chandeliers, 120 specialists in high-price properties, each of whom had paid $175 to participate, met to discuss the sale of more than 300 parcels of property in 35 states.

To be eligible for the sale, the properties needed a minimum price tag of $1 million.

There was a city block in Philadelphia for sale, Manhattan office buildings, hotels, marinas, shopping centers, apartment complexes, ranches, nursing homes, golf courses and undeveloped real estate, including, a seller boasted, the last remaining hotel site on Kaanapali Beach, Maui, Hawaii. Asking price: $7.5 million.

Unknown Quantity

At the close of the auction on Tuesday no one knew how many deals would result from the meeting. Gerald Jackson, president of San Francisco's American Real Estate Exchange, which conducted the so-called "Market Day" as part of an effort to develop a national marketplace for purchase of expensive real estate by institutional investors, said:

"At this point, people tend not to want to talk about their deals. They keep them kind of quiet; and from what I can tell, they're talking transactions of $50 million to $75 million, and there's another deal that may jell—an apartment complex for almost $20 million."

Still, sellers outnumbered buyers at the sale by at least four to one, and there were lots of disappointed sellers.

Mr. Jackson's staff acted like matchmakers in a dating service. Owners and brokers who wanted to sell a parcel listed them in a looseleaf folder and when potential buyers sighted something of interest, they submitted a note to the chairman asking to discuss the matter. The sellers and shoppers then went off to the side to discuss a sale.

There were other disappointed sellers—especially among those offering undeveloped land. But several said they had initiated negotiations that they expected to lead to sales.

"I've seen several things some of our foreign buyers may be interested in—some regional shopping centers and some agricultural land," said Burton Engel of New York's Amivest Corp., who said he was acting as an agent for buyers in Britain, Italy and other European countries.

"The idea has potential," he said, "but you have to remember—it's one thing to sell 100,000 shares of stock to somebody and another when you have to negotiate and analyze real estate; this can take months. But this kind of thing does open a new source of communication you didn't have before."

4 Jailed in Italy In Slave's Death

BARI, Italy, Nov. 21 (Reuters).—Four men have received jail terms of up to a year for maltreating a young boy who killed himself after having been sold at a southern Italian labor market near here.

The boy was sold to a local farmer in August of last year at the annual market of child labor held each year in the small town of Altamura, newspapers reported last week.

A court here was told that the boy's employer paid his parents 125,000 lire ($134) plus a quantity of cheese, wood, cooking oil and salt for his services. The prosecution alleged that the boy, who had been with different employers since the age of 11, worked a 15-hour day starting at 3 a.m.

For Top-Level Positions

Carter May Pick a Record Number of Women

By Constance K. D'auVin

WASHINGTON, Nov. 21 (IHT).—President-elect Jimmy Carter will appoint unprecedented numbers of women to top-level positions in his administration, according to the women who have advised him on various issues and worked in professional posts in his campaign organization.

Sources close to the transition team, the group in charge of putting together the new administration, feel that as many as 35 per cent of the top jobs may go to women, chosen from more than 3,000 résumés gathered by Carter workers in the last few months. Of the Ford administration's 1,500 top appointees, 3 per cent are women.

During the campaign, Mr. Carter made what Mary King, Mr. Carter's adviser on health and other issues, has described as a "concerted effort" to find qualified women for his administration. Last June, Mr. Carter formed the Committee of 51.3 Per Cent, so-named, he said, because that is the percentage of women in the U.S. population. Miss King was named national director of the committee.

Women's Organizations

The panel is composed of more than 130 advisers, most of them people who head organizations of women as diverse as the National Organization for Women and the Campfire Girls. Also involved were Gloria Steinem, Pamela Harriman, philanthropist Mary Lasker, United Auto Workers vice-president Odessa Komer and all 14 Democratic congresswomen.

Many of the women on the committee were general policy advisers as well. Those contacted felt that their statements were taken as seriously as those of the male advisers with whom they sat in session.

After the Carter nomination, the Democratic National Committee diverted many volunteers to staff an office called Talent Bank. This collected the résumés of more than 3,000 "highly qualified" women, according to volunteers, and fed their qualifications into a computer.

The resumés were solicited from applications mailed out to a roster of women compiled by the advisers and other top women in the Carter camp. Mrs. Harriman called the eight women she has recommended "spectacular," but declined to identify them.

Substantial Numbers

Citing President-elect Carter's often repeated promise to "appoint substantial numbers of women to my administration," top women in all the Carter organizations seem to have had some part in Talent Bank. They agree that Talent Bank's main goal is to assure that "never again can a politician say that there aren't enough qualified women to appoint to top positions."

At a news conference last Monday, Mr. Carter said that there are 6,000 to 7,000 names in a computer that will be used to sort possible appointees. If the same computer is being used for all those considered, nearly half those names could be women.

A Talent Bank worker explained that resumés from women were being coded so that they could be called up from the computer in two different ways. One code would call up all resumés applicable when sex is the major determinant of who will get a particular job. The other code would call up resumés of persons with a particular skill, regardless of sex, when that skill is the determinant of who will get the job.

The head of operations at the transition team is a woman, Barbara Blum though its nominal head, Jack Watson, is a man. Mr. Watson told the Women's Democratic Club Thursday that the complete transition staff will be 35 to 38 per cent women on the professional level.

Carter supporters believe that his commitment to women is philosophical rather than political. "Deserving, talented women do not get ahead naturally in our society," said Prof. Ruth Morgenthau, who teaches political science at Brandeis University. She took leave from her work to serve on 51.3 and the campaign's foreign affairs task force. She is "heartened" by what she feels is a conscious effort to see that more women are appointed.

When the Committee of 51.3 Per Cent got under way, position papers regarding 11 aspects of women's rights were distributed to women's groups and female elected officials and executives across the country.

In them, Mr. Carter stated that he intends to see the Equal Rights Amendment passed while he is President. The papers advocate new legislation in the areas of Social Security, credit, probation and divorce.

Barbara Blum heads Carter transition operations.

Russia Accepts U.S. Extension Of Fishing Limit

WASHINGTON, Nov. 21 (AP).—In a policy reversal, the Soviet Union has tentatively acquiesced to an American plan to unilaterally extend U.S. fisheries limit from 12 to 200 miles, U.S. officials have said.

The Soviet decision was made Friday, the third day of U.S.-Soviet negotiations for an agreement that would take into account new U.S. fisheries legislation. Officials said the decision of the Soviet negotiators here is subject to final approval from Moscow.

The U.S. fisheries law goes into effect on March 1, five weeks after President-elect Jimmy Carter will take office. An official said the conciliatory Soviet attitude probably is based on a desire by Moscow to avoid an early conflict with the new administration.

The absence of an agreement with the Soviet Union had raised the possibility of a confrontation over fishing rights after the fishing limit was extended. The law authorizes the U.S. Coast Guard to arrest foreign vessels operating within the 200-mile limit if they have not obtained proper documentation.

Kennedy Ceremony Rescheduled in Dallas

DALLAS, Nov. 21 (AP).—A hastily organized prayer vigil will mark the anniversary tomorrow of the assassination in 1963 of President John Kennedy in Dallas.

Mayor Robert Folsom had canceled the usual commemoration, but the Dallas County Democratic chairman, Ron Kessler, said yesterday he received "about 500 phone calls" protesting the lack of a memorial service.

Trade Union Group Makes Survey

Job Bias Against Women Is Found in Europe

By David Haworth

BRUSSELS, Nov. 21 (IHT).—Western European governments, according to a trade union document just published here, are failing to draw on great reserves of women workers and are exploiting those women who have found jobs.

Produced by the European Trade Union Confederation, the 180-page report published here last week makes dismal reading for those who might have thought the age of sexual equality has arrived.

The confederation represents 15 countries, in which 44 million women work. The 15 include all nine members of the European Economic Community.

Despite the EEC's Treaty of Rome injunction of equal pay, and the existence of equal-pay legislation in most of the non-EEC members of the confederation, women are still badly treated in these countries, the report finds.

Although the number of women joining the work force is continually growing in all the countries, the report said there is still underemployment of women and greater unemployment among women than among their male colleagues. In addition, there are considerable regional disparities in the success of women in getting and holding jobs.

Some 40 per cent of women in the Paris area have work, it said, whereas only 26 per cent of the women in the French Mediterranean region have jobs.

In France, the participation of women in the economy is dependent—as elsewhere—on the job opportunities offered them. Underemployment in France is estimated at over 2 million. This means that in order to allow Frenchwomen to work everywhere in the country in the same proportion as in Paris 2,200,000 new jobs would have to be created for them.

A similar number of jobs should be created in Italy, says the report, which points out that of 28 million Italian women, only 5 million have work. This contrasts with a male population of 26 million, 14 million of whom are working.

The report gives two examples of differing rates of female employment in different regions: In Lombardy, 20 per cent of women have jobs, in Sicily 1.8 per cent.

The Trade Union Confederation finds that in Ireland the marriage of a woman worker is frequently the cause of dismissal or forced resignation. Although elsewhere in Western Europe there is a steady increase in the percentage of married women among women workers, Ireland is at the bottom of the list in this respect with 13.5 per cent. This contrasts with the next country, Luxembourg, which has 42.5 per cent.

All the other EEC countries have higher proportions, culminating with Britain, which has 67.2 per cent of married women among women workers.

Throughout the world some 28 per cent of women are economically active, according to the report. The percentage varies considerably from one European country to another, it says. In Spain, for instance, only 22 per cent of women have jobs, while in Sweden the percentage is rather more than 40 per cent of the female population, according to the report.

In Switzerland, the comparable statistic is given as 40 per cent, while in Norway 38.5 per cent of women have paid jobs and the Netherlands the figure is 35 per cent.

The report finds that even in a country like Britain, which has a sex discrimination act, women frequently restrict their career choice because of traditional influences that say that a woman's place is in the home and that her wages should not be more than not

Court Approves $4-Million Award In Gulf Oil Suits

PITTSBURGH, Nov. 21 (AP).—A U.S. District Court last week approved a $4-million settlement of shareholder suits against former Gulf Oil Corp. officials who used corporate funds for illicit political purposes.

Gulf officials distributed more than $12 million to domestic and foreign political figures over a 13-year period beginning in 1960.

Judge Joseph Willson said he found no evidence that any former Gulf executives benefited personally from the fund, which was first disclosed when the corporation admitted giving $100,000 to President Nixon's re-election campaign in 1972. Only 10 of Gulf's more than 300,000 stockholders objected to the terms of the settlement.

The company must pay legal fees for the former officials involved, and about $1.8 million from the settlement will be used to pay attorneys who handled the case. Two-thirds of that sum represents defense lawyer fees.

Six former Gulf executives and directors were named in eight stockholder suits. Their contribution toward the settlement will be nearly $2 million, largely in forfeited stock options and bonuses.

Women Attack Display Of Socks in Cleveland

CLEVELAND, Nov. 21 (AP).—More than 250 members of the National Organization of Women (NOW) invaded the May Co. store in central Cleveland yesterday to protest a display of men's knee-length socks that they said make light of rape.

Imprinted on the socks is the message: "Help stamp out rape, say yes."

Some of the women climbed on a glass counter, and some threw socks on the floor, where the merchandise was stomped on. A May Co. security employee said the store lost about a dozen pairs of the socks, which sell for $2 a pair. There were no arrests.

Divorce Rate Found to Rise For Couples That Cohabited

COLUMBUS, Ohio, Nov. 21 (AP).—Couples who live together before marrying are less likely to have happy and successful marriages than couples who live apart until their wedding day, according to a university researcher.

"Practice doesn't make perfect," says Nancy Clatworthy, associate professor of sociology at Ohio State. Prof. Clatworthy interviewed 100 couples last year for a study which concluded that "living together is not a good prelude to marriage."

The couples interviewed, aged 18 to 35, were selected at random. Eighty per cent were undergraduate college students and 20 per cent were Columbus-area residents.

Sixty-five per cent had lived together for an average of 2 1/2 years before marrying and had been married for two years. Ten per cent of this group had been married and divorced before.

Average of 5 Years

The remaining 35 per cent of the couples interviewed had not lived together before marriage and had been married an average of five years. It was the first marriage for all of them, but 50 per cent had sexual relations with their spouses before marriage.

"The findings do not support the hypothesis that a period of living together before marriage better helps to select a compatible mate or aids in adjustment to marriage," Prof. Clatworthy said in an interview.

She said the study indicated that couples who had not lived together before marriage were "just a little bit happier and more successful. There were fewer divorces."

The differences in the couples chosen were not significant, she said. All of them had basically the same problems, but those who had not lived together first "were higher on all scales, more involved and happier."

These couples, she said, "seemed to express a greater feeling of happiness and contentment and more pleasure with their partner than did the live-in couples."

Prof. Clatworthy said an explanation is that living together takes the romance and mystery out of marriage.

'Runny Nose'

"For instance, you find out living with somebody just how often they do have those sinus attacks and runny nose," she said. "Perhaps all we're seeing is the fact the first years of marriage have already been experienced with all these problems in the live-in couple. The couples who are not living together prior to marriage are still in sort of a romantic haze."

In another study last year, Prof. Clatworthy interviewed 40 couples, most of them college students, who had lived together but broke up before marriage. Two-thirds of the couples broke up for reasons similar to those that result in marital splits, she said.

This might indicate that living together and breaking up before marrying may prevent bad marriages and spare some couples from unhappiness later. "But we can't draw that conclusion," Clatworthy said.

"Living together creates a whole new set of problems they wouldn't have had if they had gotten married in the first place," she said.

Courtship Process

Prof. Clatworthy said that before her most recent study she had begun to believe that living together before marrying might be a beneficial step in the courtship process.

Now, however, she said she believes it may be a harmful practice, especially for women.

"We notice that when they break up the women are more likely to mention problems in the relationship than the men," she explained. "On the other hand, our data showed that the women coped with the live-in situation better than the men. It was the women that they complained about more frequently."

Appoints 340 Members

unta in Bangkok Selects National Assembly

By David A. Andelman

BANGKOK, Nov. 21 (NYT).—Thailand's military junta, which seized power in a coup Oct. 6, yesterday appointed a 340-member National Assembly with a broad range of military and political backgrounds. The members, however, represent the far right, with more than half military officers or ex-officers.

The government is attempting to improve its image, particularly abroad, releasing on bail students and political prisoners seized in the first days after the coup and reshuffling some of the more blatantly corrupt officials in some ministries and in the police.

But many repressive aspects seem likely to continue. Funds were recently appropriated to build several "re-education centers" for political prisoners. None of these prisoners have yet been brought to trial.

A midnight to 4:30 a.m. curfew is still in force in Bangkok, and hundreds are arrested each night for violating it. The government is continuing a propaganda campaign against Vietnam, accusing it of helping Thai insurgents in the northeast.

"The fact is that the basic character of the government is the same," said a leading Thai political scientist who has watched governments here come and go. "It must still respond to the will of those who give it its real support."

Most domestic and foreign observers here realize that the government's real support comes from the royal palace and the rightist business-military establishment.

The selection of the members of the new assembly was an effort to win over this establishment, which is still waiting on the sidelines to see whether the new government will indeed restore the type of order and tough leadership that has been absent during the last three years of democratic rule.

The Cabinet was, by all accounts, a big disappointment—with few professionals from either the political or the military-industrial sphere getting major posts.

There is reportedly considerable disaffection among some elements in the armed forces because they did not take a part in the coup. And there are persistent rumors of a new coup that would restore leadership to line officers commanding important troop divisions rather than desk officers from supreme command headquarters.

U.S. Is Firm on Precondition for Talks on Vietnam Ties

By David Binder

WASHINGTON, Nov. 21 (NYT).—A State Department official said that the United States would continue to insist on obtaining "a full accounting" of Americans still officially listed as missing in action in the Vietnam War before discussing establishment of diplomatic relations with Vietnam.

Frank Sieverts, deputy coordinator for prisoner-of-war and missing-in-action matters in the office of the deputy secretary of state, said last week that he believed this stance had the approval of the Ford administration, Congress and President-elect Jimmy Carter.

In an interview several days after the United States used its veto in the United Nations Security Council to block Vietnam's application for membership, Mr. Sieverts took issue with a Vietnamese statement that it was impossible to meet the U.S. demands.

"We are not expecting a detailed account on each case," Mr. Sieverts said. "But as a first step, they could give us all the information they have and, as a second step, an assurance that a serious search effort has been conducted for the others. We have provided a list of names."

Genuine Issue

Asked whether the question of the missing in action was a genuine issue or had political overtones, he said:

"It is a realistic issue. It is valid. There is something there that the Vietnamese could provide, which could be settled quickly."

There are believed to be between 880 and 1,000 Americans missing in various parts of Indochina, according to administration officials. The Defense Department listed 774 missing in action in the Vietnam area as of last Sept. 30.

Lacking means of final registration, many families persist in hoping that their relatives are still alive.

12 Names

The concerns of such families are fed on the one hand by recent unsubstantiated news reports that there were still "275 Americans in captivity" in Vietnam and on the other hand by Vietnam's disclosure on Sept. 6 of the names of 12 U.S. war dead who had previously been on the list of missing. "It means they really do have more information," Mr. Sieverts said.

Under the cease-fire accord of 1973, it was agreed that all participants to the pact would, to the best of their ability, provide information on prisoners of war and missing servicemen.

"They have viewed the lists as a bargaining chip to obtain economic aid for reconstruction," a State Department official remarked.

On Nov. 12, Vietnamese and U.S. Embassy officials met in Paris for exploratory talks on the possibility of negotiating a normalization of diplomatic relations. The Vietnamese Embassy said afterward that it was ready to discuss the U.S. demand for information about the missing in action, but insisted that the United States help pay for Vietnam's reconstruction.

There were reports at the same time in Paris that the U.S. Defense Department had considered announcing formally that the missing were all presumed dead, thereby removing the major obstacle on the U.S. side to proceeding with substantive negotiations. But these reports were dismissed here by an administration official as "idle talk" and "impossible."

Philippines Ousts 2d U.S. Priest

MANILA, Nov. 21 (NYT).—The Philippine government last night deported another U.S. missionary, the second last week, in a crackdown on active church groups.

Informed sources said the Rev. Albert Booms of the Pontifical Institute for Foreign Missions, a native of Arbor Beach, Mich., was put aboard a Philippine Air Lines flight for San Francisco. He had been arrested earlier at his parish in the slum district of Tondo.

Another Roman Catholic missionary, who also worked among slum groups, the Rev. Edward Gerlock of New York State, was deported Thursday. The Immigration Bureau explained that Father Gerlock had been found to have shown "undue interest in the political affairs of the country."

Italian Newspapers To Be Cut to 16 Pages

ROME, Nov. 21 (UPI).—Italian newspapers will be cut to 16 pages—eight editorial and eight advertising—Tuesday and may be slashed to a total of eight pages later, the Italian Newspaper Publishers' Federation said.

The federation said the publishers cannot pay higher prices for newsprint demanded by suppliers. The government has refused to allow the price of newspapers to be increased from the present 150 lire (14 cents) because they are one of the items on a list of goods whose price determines whether wages should rise automatically.

Geisel and Slow Democracy Apparent Winners in Brazil

By Bruce Handler

RIO DE JANEIRO, Nov. 21 (WP).—The real "winner" of Brazil's nationwide municipal elections last week seems to be President Ernesto Geisel and his plan to return the nation slowly to democratic government under a military-imposed timetable.

The elections, which were held Monday, went pretty much the way Mr. Geisel had hoped. The former army general had campaigned actively for the official government party, known as Arena. It took most of the mayoral races and captured city council majorities in most towns.

Although Brazil's one legal opposition party, MDB, beat Arena in most of the nation's major cities, its overall performance could not be interpreted as a repudiation of Mr. Geisel.

Projections indicated that Arena would wind up with 53.8 per cent of all the valid votes cast nationwide, compared to 46.2 per cent for MDB—the Brazilian Democratic Movement. Latest totals showed Arena has 14,168,721 votes to the MDB's 11,672,571.

Very Satisfied

"I am very satisfied with the election results," Mr. Geisel said. "It looks as though Arena is winning a great victory."

In reality, the margin was not as great as it appeared on paper. In part because of government pressure, MDB was unable to set up local organizations in a third of the townships. In many cases, MDB could not even field candidates for mayor.

These elections were more balanced than the congressional elections of 1974, in which MDB did far better than anyone expected and sorely embarrassed President Geisel, Arena and the 12-year-old military regime.

The national president of the MDB, Rep. Ulysses Guimaraes, said the election results were "positive in terms of Brazilian institutions." He added: "One election leads to another."

Mr. Geisel's timetable, over which there has been considerable behind-the-scenes debate within the armed forces, calls for direct elections for state representatives, the federal congress and state governors in 1978, with the same two parties competing. Now, governors are simply appointed by the President.

TV Restrictions

MDB said it was happy with its vote total in Sao Paulo and Rio de Janeiro, the two largest cities, but that it was surprised when Arena won in the important southern city of Curitiba.

MDB leaders insisted their party would have done better, had it not been for a law that prohibited radio and TV debates on the issues. Candidates could say whatever they wanted in public rallies, but on television they were restricted to citing their name, background and number on the ballot.

The government said this law was to avoid "confusing the voters," based on the fact that elections were being held in nearly 4,000 townships, with dozens of candidates running from each party in each place. But the MDB believes the real purpose was to prevent the opposition from criticizing the regime on the 10 million TV sets and countless millions of transistor radios, as happened in the 1974 campaign.

The Brazilian municipal elections reflected grass-roots democracy in many cases. In Porto Alegre, a city of 900,000 in the far south, Antonio Candido Ferreira, a shoeshine man in a downtown plaza, was elected to the City Council. Mr. Ferreira, who is in the MDB, said he would protect the interests of poor people.

'Black Beans' the Write-In-Choice Of Thousands Who Voted in Rio

RIO DE JANEIRO, Nov. 21 (UPI).—Between 100,000 and 200,000 voters in last Monday's municipal elections voted for "black beans," the Brazilian staple food that is in extremely short supply these days, according to two separate counts.

Congressman Vilmar Pallis, secretary-general of the Rio area Alliance for National Renewal, said his canvass of poll counting areas showed that at least 200,000 voters wrote "black beans" on the ballot slips instead of the name of a City Council candidate.

In attempting to verify the claim, the newspaper O Globo made its own check and reported that at least a majority of the 242,235 nullified ballots had the vote for more food written on them.

Beans, along with rice considered the essential part of the Brazilian diet, were rationed last month and scuffling broke out on "bean lines" throughout Rio when supermarkets began distributing supplies imported from Chile and Mexico.

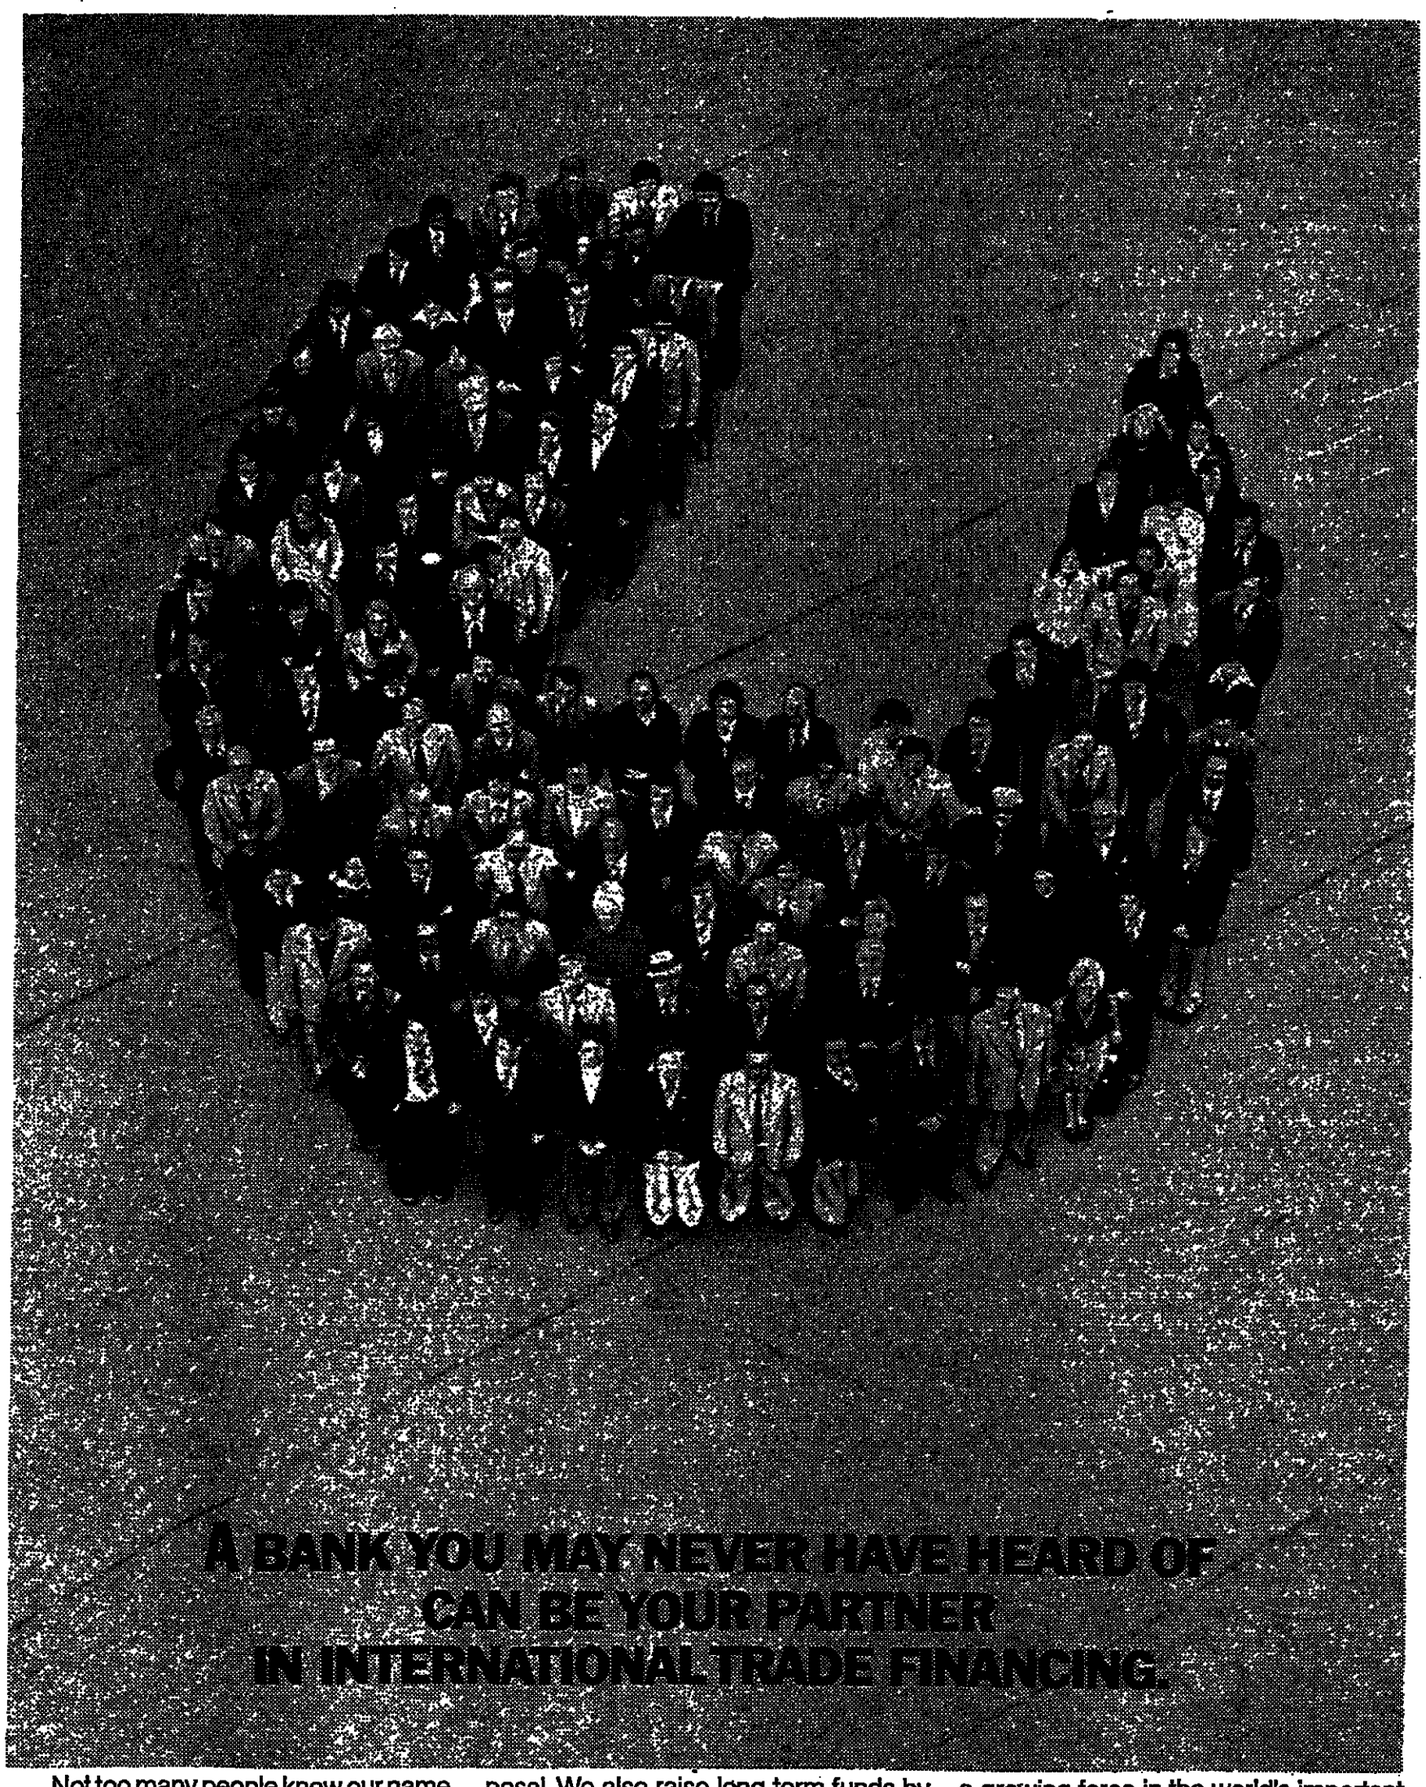
Beans are in short supply because of a combination of floods in the bean-growing Amazon area, drought in another important bean-producing area, and a government policy that encourages export food products at the expense of black beans.

Scotland Yard Cracks Gold Coin Conspiracy

LONDON, Nov. 21 (UPI).—Scotland Yard said yesterday that detectives had smashed a forgery plot that could have caused "immeasurable damage" to the world's gold markets by flooding them with fake half-sovereigns.

A Yard spokesman said that police raiders uncovered the counterfeiting operation in Essex. Four men were arrested and detectives confiscated a six-ton hydraulic press and a large quantity of foreign gold coins, which apparently were to have been melted down and used in the making of the bogus half-sovereigns.

Congress Race s Still Undecided



WASHINGTON, Nov. 21 (AP).—Only one congressional race remains undecided following the declarations of winners last week races in Michigan and Illinois. In Illinois, Rep. Abner Mikva re-election by 201 votes—304-106,603—over Republican muel Young, an official Cook nty canvass showed.

Republican Carl Pursell was clared the winner of the chigan 2d District race over mocratic challenger Edward ce in the battle for former p. Marvin Esch's seat. Mr. h lost his bid for the Senate. n the undecided race, in the te of Washington, Rep. Lloyd eds, a Democrat, had a 498-e lead over Republican Chal-ger John Nance Garner.

U.S. Oil Companies' Commitments

The Federal Energy Administration now proposes to make the oil companies tell it all about their agreements with foreign governments. It's a fine idea—and a genuine service that the Ford administration can perform in this twilight period when, at last, it doesn't have to worry about political reactions. For the proposal has large implications for American oil strategy

Companies regard their buy-and-sell agreements as their private affairs. But the oil business is fundamentally different from the shoe business or the automobile business. The international oil companies buy directly from governments, and the exporting governments are formed into a tight cartel. Some of these governments have repeatedly demonstrated their determination to use the oil weapon for political purposes; some also have large industrial ambitions. The U.S. government is, quite reasonably, curious about the nature of the commitments that the oil companies are making in order to protect their access to OPEC's oil.

The companies are already required to report their foreign costs, and prices paid, to the FEA. But the companies' current agreements with the exporting countries often go far beyond simply buying and selling crude oil. Some of the companies have, for example, commited themselves to further exploration in the OPEC countries. Has any of them also agreed to limit its exploration elsewhere, as part of the bargain? How far have they gone in promising to run their oil through refineries in the OPEC countries, rather than in Europe or the United States? Are there agreements to use the tanker fleets that some of the OPEC countries are building up? Are any commitments being made regarding the companies' behavior in future economic warfare, like the 1973–74 Arab embargo against this country and Holland?

Most of the oil companies feel that they have kept the U.S government adequately informed of their foreign operations. But they may not be the best judges of what's adequate. The FEA observes that OPEC governments may be writing provisions into these contracts that, taken one by one, seem innocuous enough but, taken all together, present quite a different aspect. The FEA proposal would require the companies to file with it all of their obligations to foreign governments—the contracts, the policy statements, the letters of understanding, everything. They are documents to whish the U.S. government ought routinely to have access.

In the postwar years it was the State Department that took the initiatives that led to massive American investments in the Middle Eastern oil fields.

Most Americans—when they think at all about the political uses of oil power—consider it only in terms of the Arab-Israeli conflict that produced the last embargo. But people in other parts of the world see far wider applications of it. Last August the conference of 84 non-aligned nations in Sri Lanka urged an oil embargo against France for selling nuclear reactors to South Africa. Far more important, OPEC is currently hinting that the much-advertised December increase in oil prices may depend on the next American offer at the stalemated meetings in Paris between the rich and the poor nations. The oil companies keep objecting that they are private businesses. True, but their business is far more than a private affair.

THE WASHINGTON POST.

Watershed in Spain

In demanding that the Franco-created Cortes reject the Spanish government's bill to re-establish an elected parliament, one of the late generalissimo's idolators exclaimed that the measure would "dismantle Franco's life work." At the end of the debate, the 531-member Cortes voted itself out of existence and approved Spain's first parliamentary elections in 41 years—to take place in 1977—by the astonishing margin of 425 to 59, with 13 absentions.

It was a tremendous victory for Premier Adolfo Suarez, plucked from relative obscurity by King Juan Carlos last summer to replace the Franco holdover, Carlos Arias Navarro. And it did more than any previous development in the first year of his reign to validate Juan Carlos's pledge that he would work to restore "authentic liberty" and democratic government to Spain.

The bill to provide a freely-elected parliament represents a complete break with Franco's legislative system, under which two-thirds of the Cortes was appointed. The vote in fact exposed the rapid disintegration as a political factor of Spain's extreme right, which had vowed to riddle the bill with crippling amendments or muster enough support to prevent its passage by the required two-thirds majority

It is much too early, however, to speak of dismantling Franco's life work Spain is still encumbered by countless trappings of the Caudillo's authoritarian rule Trade unions and some political parties remain illegal, police excesses, including arbitrary arrests, are still commonplace. On these counts, a wide spectrum of forces banded together as the "Democratic Coordination" are still threatening to boycott the referendum next month that is necessary to ratify the parliamentary reform and insure next year's elections.

Leaders of the Democratic Coordination make a valid point in arguing that Spain's route to freedom should be charted with the participation of all democratic forces, not issued reluctantly, step by step, by Francoist institutions. But if the government sticks to its course with elections before next June —and the selection of the more powerful lower house by a modified proportional representation that is fair for minorities—a boycott might be extremely unwise. It will be the elected parliament that writes Spain's post-Franco Constitution.

In all probability the fate of Francoism was sealed by the first article of the bill passed by the reluctant Cortes, which requires that democracy in Spain be based "in the supremacy of the law and the sovereign will of the people.'

THE NEW YORK TIMES.

Good Start in Italy

Italy's minority government survived the first critical test in Parliament for its economic austerity program because the powerful Communist party abstained instead of voting "no.' Prime Minister Giulio Andreotti had nailed down that imperative abstention prior to the formal debate in a three-hour discussion with the Communist leaders and a talk with the Communist head of Italy's largest trade union confederation.

It is far from unprecedented for a Christian Democratic prime minister to discuss major moves in advance with the Communists; but the consultation has become more necessary and more extensive since the Communists won 34 per cent of the vote in the June election, only four points behind the party that has headed every Italian government since 1945.

Confronted by 20-per-cent inflation, a foreign debt of $17 billion, soaring imports, a shaky lira and dangerously depleted currency reserves, Andreotti had no alternative to imposing austerity measures on a country not noted for fiscal or industrial discipline. Without such actions, Italy would have difficulty obtaining even the $530-million credit it seeks from the International Monetary Fund, let alone the much larger loans it hopes to get from the United States and the European Community to ease the pressure on its balance of payments

Andreotti's package includes higher taxes, enforcement of advance tax payments, cuts in public spending, substantial rises in electricity charges, telephone tolls and gasoline prices, and a start on modifying inflationary wage boosts. Additional measures will be required by Italy's creditors at some stage, but the Prime Minister has maneuvered with courage and skill to get this first round accepted by Parliament, even if abstainers outnumbered supporters.

No one knows how long Communist leader Enrico Berlinguer can hold his parliamentary ranks in line for abstention and his union followers for wage restraint Though there have been few defections, the policy has created uneasiness among party workers and was sharply challenged last month by the party's patriarch, Luigi Longo. Berlinguer often finds it necessary to warn the government against taking Communist cooperation for granted and he continues to press his proposal for a summit meeting of all parties, except the neo-Fascists, to deal with the economic crisis.

Meanwhile, Andreotti obviously intends to take maximum advantage of Communist abstentions to make a long-overdue start on economic recovery. He will come to Washington next month to seek help in that effort and probably to see President Ford. On his performance thus far, the Prime Minister deserves a sympathetic hearing.

THE NEW YORK TIMES.

In the International Edition

Seventy-Five Years Ago

November 22, 1901

LONDON.—There is undoubtedly a good deal of truth in what "A Literary Man" wrote in a letter which appeared in Wednesday's Herald about packages of books coming from Paris and addressed to certain booksellers here being stopped by the customs authorities for examination, and certain works being prevented from circulation in this country. The authors involved, whose works are considered "spicy," are Guy de Maupassant, Octave Mirbeau and Emile Zola.

Fifty Years Ago

November 22, 1926

PARIS.—A sensational film of which much has been heard lately has just been shown privately by the Cine Club de France, but it is not yet clear if the authorities will permit the film to be released to the general public. The film, "Cruiser Potemkin", is directed by Sergei Eisenstein and is based on a mutiny which took place in 1905 at the end of the Russo-Japanese War when the crew revolted because of bad food. Politics aside, Mr. Eisenstein is a great and creative director.

The Day After Mideast Peace...

By Walter Laqueur

WASHINGTON.—Generals, it has been said, always refight the last war. As for the Middle East, this is increasingly true with regard to the diplomats and their advisers. Innumerable conferences, speeches and position papers deal with the future of the region, but most of them labor under the delusion that "peace in the Middle East" is a synonym for the resolution of the Arab-Israeli conflict. The tragic case of Lebanon has apparently not sufficed to enlighten these well-meaning people that there is not one Middle East crisis but many crises.

The issues at stake are territorial, as well as ideological, social, religious and political; these are conflicts between states, as well as within societies, and the resolution of one does not necessarily diminish the intensity of the others. In some cases, it may, in fact, have the opposite effect, just as the suppression of the symptom of a disease will sometimes be considered a mixed blessing by the medical profession.

Assumptions

Let it be assumed, for argument's sake, that sometime next spring the Geneva conference is reconvened, that the Israeli government overcomes its inertia, its suspicions of Arab long-term intentions and its fear of the opposition at home.

Let us further assume that the Arab countries and the various groups of the Palestinian resistance (including the "Rejection Front") will agree on the establishment of a Palestinian state on the West Bank, and that they will, at long last, accept the existence of Israel and recognise it; let us assume that the Palestinian state will prove to be economically viable and capable of absorbing hundreds of thousands of refugees; and let us assume that it will not launch attacks against Israel, and that it will not become, within a few months, a Soviet military base.

Any single such assumption staggers belief. In combination, such a wondrous sequence of events would be without parallel since the feeding of the multitudes with five loaves and two fishes. Miracles are said to have happened in the Holy Land, and for all one knows they may happen again. If so, how close to peace will the Middle East be on the morning after?

War Danger

The danger of war between Turkey and Greece over the Aegean and other issues will not have disappeared; the problem of poor Cyprus will be no nearer to solution; Iraq will still be at loggerheads with Syria and Saudi Arabia, and it will still look for an opportunity of seizing Kuwait; the many conflicts in the Arab peninsula from Oman to South Yemen, temporarily submerged, may still become acute at almost any moment; Egypt will still be distrustful of Syria and vice versa; a real solution for Lebanon will not be in sight; Moamer Qadhafi of Libya will still try to overthrow his enemies, who include just about everyone in the Arab world, with the possible exception of Houari Boumedienne of Algeria, but President Boumedienne is still involved in a war by proxy, over Western Sahara, with Morocco and Mauretania, which may easily turn into full-scale war.

This enumeration of conflicts is, of course, by no means complete: In addition, there is the growing tension between the haves and the have-nots, between the oil-rich and the desperately poor, between pro-Communists and Moslem fundamentalists, between various ethnic and religious minorities, between rival contenders for political hegemony in the area.

It would indeed be against all historical experience if, one day soon, someone did not try to correct the vagaries of nature that have given some of the smaller countries a per-capita income that is a hundred times higher than that of their more populous neighbors.

A Catalyst

The Arab-Israeli conflict has acted as a catalyst in the past to prevent this; what other holy war could take its place? Nor is it a secret that the political future of some of the countries riding high on the wave of oil is quite uncertain, that power in these countries could well fall into different hands, and that the influx of enormous quantities of modern arms (and the consequent rise of a new military class) will only hasten this process.

It is said that all this may well be true but that it would not endanger the flow of oil nor would it lead to a confrontation between the superpowers. But this is stretching optimism a little far; if Korea, Vietnam and Angola could turn into international crises, how much further-reaching would be the global repercussions of conflicts affecting an area of far greater economic, political and strategic importance?

It is an inescapable fact that the Middle East contains a great amount of flammable material, and for a long time to come it will remain an area of political turbulence. That a settlement of the Arab-Israeli conflict would be highly desirable goes without saying. But this is true only if the cure is not worse than the disease; no one would be helped by a "peaceful solution" that transforms, with almost mathematical certainty, a regional dispute into a superpower confrontation.

'Eternal Peace'

When Kant, the great German philosopher, wrote his famous essay on "Eternal Peace" some 200 years ago, he noted that the ironic motto of a Dutch inn sign, showing a graveyard, had inspired his title. Whatever the inspiration of those promising a universal and durable peace, not as a distant hope but as an immediate possibility, the graveyard could well be the result of their efforts.

The world will have to live with the Middle Eastern crises: They should be tackled without illusions, recognizing that there are no quick fixes and short cuts to bring peace to an inherently unstable area. Blessed indeed are the pacemakers—but this blessing does not extend to the purveyors of gimmicks and the *terribles simplificateurs*, for whom the middle of next week represents the utmost boundary of their long-term political wisdom and perspective.

NATO Arms Supply

Smaller Bang for a Buck

By C. L. Sulzberger

VARAVILLE, France.—In the nasty, simplified cold-war days which nobody in his right mind hearkens back to, advocates of a strategy of all-out nuclear response to even the slightest aggression argued that it could be a less expensive as well as more deadly means of defending the West because it was based on "a bigger bang for a buck." This meant more calculable megadeaths for each calculable budget dollar spent.

But now the NATO alliance, whose leaders are about to hold their annual review next month, has discovered to its horror that some billions that should be invested in more effective defense are being wasted by ridiculous rivalry and duplication of effort among partners who are politically too weak or nationalistically too zealous to end this folly.

Steinhoff's View

The former chairman of NATO's military committee, West German Gen. Johannes Steinhoff, argues:

"As an alliance of sovereign countries competing with each other economically, NATO reflects the economic, industrial and political situation in each member country, and this in turn has repercussions in the great variety of projects and weapons. This state of affairs has helped to make NATO look today like an army museum."

The trouble is that this very state of affairs is rendered worse by a resurgent economic recession. Each country obviously prefers to keep alliance costs down but also favors economic nationalism so that each country can, whenever possible, manufacture and sell to non-NATO markets weapons systems theoretically designed for its own and the coalition's defense. The United States is the worst offender in this respect but West Germany, France and even Britain and Italy follow their leader.

Dr. Gardiner Tucker, recently NATO's assistant secretary general for defense support, has prepared a study on this drab subject for the Atlantic Institute for International Affairs. The background to his analysis may be seen in another observation by Steinhoff:

"We are witnessing at present a fascinating technological race between the West and the Soviet Union. Mainly because of the waste of our research and development resources we have allowed the Soviet Union step by step to reduce the gap which was traditionally in favor of the West. We give NATO the huge sum of $30 billion a year research and development, up to half of the projects parallel projects that involve unnecessary duplication, or even triplication or quadruplication."

Antitank Weapons

Tucker points out that in 1 the alliance had 31 differ types of antitank weapons wh as military analysts conside "five was probably the optim number." A further 18 were b being developed.

The ace mobile force cons ing units from seven allied tions and totalling 5,000 men seven different types of arm six types of recoilless rifles own logistical personnel, support plus so many other n tures of arms that its comma estimates today it would t twice as long to deploy for ac than it would were its equi tion standardized.

Differing types (according each nation) of fuel, ammuni arms and supplies make it so times difficult, sometimes possible to resupply aircraft s from their regular bases. Th isn't even a NATO stand nozzle for pumping gas fighters. NATO's ships have kinds of radar for fire con and 40 kinds of large-caliber therefore requiring manufac and distribution of 40 kinds shell.

According to Tucker, the sulting lack of military cohesi and inefficiency stems from fact that allied rivals for for sales (which help ease natio unemployment) "have tende protect their defense indus and to procure their own des from their own factories."

The roster of wastage is endless as it is needless. Si allies are planning six diffe tactical communications sys for their forces within the five years, but no two of t can communicate directly each other, nor can any com nicate directly with the N integrated communication tem.

Tucker rightly insists: NATO forces must be interop able. In particular, this must true of North American European forces operating gether." But what must be in fact far from being the c

We have curiously come to point where we are spen relatively more and getting r tively less for our money as e new year goes by. Isn't it time to reform, rationalize standardize the alliance's eq ment and its overall system research and development?

GOP—An Endangered Species

By David S. Broder

WASHINGTON—The 2d Congressional District of New Jersey is a mixed area, stretching from the beach resorts of Atlantic City and Ocean City through acres of vegetable gardens in its more rural counties.

In 1972, it went 3 to 1 for Richard Nixon and by a similar margin for conservative Republican Congressman Charles W. Sandman jr.

By 1974, Nixon was gone and Charley Sandman—one of his die-hard defenders during the House Judiciary Committee's impeachment proceedings—had lost his House seat to a 42-year-old Democratic lawyer named William J. Hughes. It was one of the classic "Watergate" victories in a year in which Democrats across the country exploited that issue for upset victories in traditionally Republican districts.

This year, Watergate had been replaced as the main issue in New Jersey by a referendum on legalized gambling. Instead of the abrasive Sandman, the Republicans were running a personable leader of the state legislature who was a well-known former television personality.

The result: Hughes won re-election, not by the 30,000-vote margin of 1974 but by 54,000 votes.

The 6th Congressional District of Indiana includes part of the City of Indianapolis and four of its surrounding suburban counties. In 1972, Nixon got 74 per cent of its vote and 12-term conservative Republican Congressman William Bray won with 65 per cent.

But two years later, in 1974, the 28-year-old parochial school teacher whom Bray had trounced in the previous campaign came back to win on the Watergate issue. The victory of young Democrat David W. Evans in that heavily Republican district was described by the Almanac of American Politics as "one of the two biggest upsets in House races" in the entire country.

The Almanac forecast that Evans's district "will be one of the toughest seats in the country for the Democrats to hold," noting that "numerous ambitious young Indianapolis-area Republicans undoubtedly see this as the district that could elect them to Congress for years."

The winner of the Republican nomination in that district turned out to be David G. Crane, with credentials as a lawyer and, a physician, and a polished speaker besides. As might be expected of the younger brother of Rep. Philip M. Crane, R-Ill., one of the favorite speakers of the conservative circuit, David Crane was generously favored with campaign funds. He also had coattail help from President Ford, Gov. Otis Bowen, R., and Sen.-Elect Richard G. Lugar, R.

The result: David Evans won re-election not by the 7,000-vote margin of 1974, but by 19,000 votes.

These are but two examples of a political story of such sweep and importance that it is only now, two weeks after the election, that its full dimensions are beginning to become clear.

It was known quickly that the Democrats had maintained and, in fact, slightly increased the 290-145 September majority in the House and their 62-38 advantage in the Senate.

Significance

But that fact takes on a slightly larger significance when it is noted that, not since the height of the New Deal, from 1932 to 1938, have the Democrats been able to maintain such lopsided congressional majorities for more than one election.

And when one reads in Congressional Quarterly that of the 78 Democrats first elected to the House in 1974, or in later special elections, only two were defeated this month, the scope of the transformation of American politics begins to become clear.

The full impact is realized when you look in detail at the districts, like the 2d of New Je and the 6th of Indiana, that h been remade in these two e tions from Republican strongh to Democratic bastions.

Those districts range from suburbs of Atlanta and W ington, D.C. to the farms Wisconsin and Kansas to Oregon coast.

The transformation in s states is just astonishing. W consin 25 years ago had a R delegation that was 9-1 Re lican, and Democrats did not a majority in that state u 1972. Now, and for the next years, it is 7-2 Democratic. F 1950 through 1972, Democrats able to win a majority of Pennsylvania House seats half the time, and usually b margin of only one seat. T they have a 17-8 lead in Pe sylvania.

Michigan had a Democ majority once in 24 years be 1974. Now it has a Democ majority in two successive e tions.

The same story can be repe in state after state. And gi the power of incumbency for modern representative—with generous staff, budget, travel lowances and public relations portunities—these new Democ majorities are likely to rem intact, barring a major polit upheaval.

The "safe Republican" congr man has become almost an dangered species, and the re perative powers of the GOP more than an opposition is highly speculative.

The immediate question faces the Republicans is whet they can even maintain enough a presence on Capitol Hill to main a significant opposition b by. Their margin for error least in Congress is very thi

Nuclear Proliferation

In an era when conflict and interest overshadow integrity and trust, the London-based talks on the control of nuclear proliferation (IHT, Nov. 12) bestow a welcome sign of dignity and purpose upon a tarnished and drifting political scene.

But whatever may be due to "self-interest" for bringing about the "London Group"—hopefully it means that the will to live is yet greater than the will to die—a badly needed dialogue is on it's way.

Exceptional Authority and Diplomatic Methods

Kissinger Attained Goals but Ran Out of Credit

By Murrey Marder

SHINGTON (WP).—Henry Kissinger, now approaching end of his tenure as secre- of state, aspired higher and ked more intermediate ob- es than any other contem- ry diplomat. But he also ated more expectations in a d in which there are no ment diplomatic victories. h exceptional authority and ols required for his diplo- to function, the longer Kissinger operated the more in he was to run out of

sident-elect Jimmy Carter, his attacks on Mr. Kissinger a "secretive 'Lone Ranger'" international adventure," has osed a new Kissinger for administration. He has said, must evolve and consumm- our foreign policy openly frankly," with "a constant ence to fundamental prin- and high moral standards." is is easier said than done. existing foreign policy which Carter wants to modify, not ge, is the product of a n of its own. It will not pear simply with Mr. Kis- 's departure.

e premises and structure ished by former President ard Nixon and Mr. Kissinger continued by President with only limited modifi- .

Moscow, there is a special ol for Soviet and Eastern pean diplomats which in- s a course just on Mr. Kis- r. A young Communist dip- at, who attended it several s ago, was asked what he ned about Mr. Kissinger that ranted special study.

e replied, with a smile, "His ments are completely con- ling—if you accept the prem- That is the key."

rt of the Nixon-Kissinger rise was beyond question: world was going through a s of transition from "the rel- of the postwar period." The ted States had lost its over- ming dominance. The soar- words of the Kennedy inau- gural, "pay any price, bear any burden" to sustain liberty in the world, proved hyperbole. They were wiped out in Vietnam, along with the dreams of Lyndon Johnson.

The second part of the Nixon-Kissinger premise was more questionable. By adroit use of diplomatic skill and military force, or the threat of it, the United States, while retrenching abroad, could establish a new world balance with minimal loss of influence. It could checkmate its greatest adversaries, the Soviet Union and China, and surpass its competitors, Western Europe and Japan.

Centralized Control

How could this be done in a democracy? By establishing highly centralized control over diplomacy and force in order to obtain maximum profit from global opportunities. By a greater willingness to take risks abroad. By maximum secrecy, not only from Congress and the public, but from the federal bureaucracy as well. And by periodic display of dramatic progress to sustain public support.

The system did not spring full-blown from anyone's mind. Its requirements appeared, however, in the pre-1969 writings of Mr. Kissinger and Mr. Nixon.

"As a nation," Mr. Kissinger wrote in 1967, "we have used power almost shamefacedly, as if it were inherently wicked.

"Our feeling of guilt with respect to power has caused us to transform all wars into crusades, and then to apply our power in the most absolute terms. We have rarely found intermediary ways to use our power and in those cases we have done so reluctantly."

Mr. Kissinger has put in conceptual terms what Mr. Nixon expressed personally in his autobiographical volume, "Six Crises"—the necessity for decisive choice to seize initiatives, act boldly, convert danger into opportunity.

They shared an equal disdain for bureaucracy, but for different reasons.

Mr. Nixon was totally suspicious of the federal bureaucracy he inherited. He feared it might try to sabotage him, remembering how the State Department had been savaged in the Communist hunt of the late 1940s and early 1950s, in which Mr. Nixon had played a major role.

History Studies

Mr. Kissinger's attitude was shaped by his studies of history at Harvard University. Bureaucracy, he concluded then, was the bane of statesmanship. Bureaucracy immobilized creativity in its quest for safety. Yet, Mr. Kissinger wrote, "It is dangerous to separate planning from the responsibility for execution."

The solution? Mr. Kissinger told a seminar in 1968: "The only way secrecy can be kept is to exclude from the making of the decision all those who are theoretically charged with carrying it out."

The core of the system devised to accomplish that is the national security structure that remains in place, although Mr. Kissinger officially no longer dominates it. Mr. Ford a year ago displaced Mr. Kissinger from one of his three roles, and installed Mr. Kissinger's former deputy, Lt. Gen. Brent Scowcroft, as national security adviser.

As secretary of state and unique global envoy, nevertheless, Mr. Kissinger continues to operate in much the same pattern as before, although his influence over the formal National Security Council structur has been curtailed, and Dona'd Rumsfeld, who replaced James Schlesinger at Defense, has checkmating leverage over Mr. Kissinger, especially on nuclear arms control policy.

Mr. Schlesinger's disappearance from the Ford administration, initially misconstrued by some to be a Kissinger victory, instead had a doubly negative effect on Mr. Kissinger. Mr. Rumsfeld, as one of Mr. Ford's closest confidantes, was in a position at Defense to balk Mr. Kissinger, without the compensations that Mr. Schlesinger had provided. While Mr. Kissinger and Mr. Schlesinger were often intense rivals on SALT strategy, they also were closer intellectually and could resolve some differences between themselve. With Mr. Schlesinger gone, there was no top official for Mr. Kissinger to coalesce with at the Pentagon.

Other president than Mr. Nixon have used devices to operate over the head, or behind the back, of their bureaucracy on occasion. But never so totally.

In the Nixon-Kissinger process, the most significan negotiations were all conducted on two tracks, one of utmost secrecy and the other a formal track. The super-secret track was disclosed only rarely, and for a specific public purpose, such as Mr. Kissinger's stage-setting in Peking for Mr. Nixon's dramatized visit to China ("the week that changed the world") and the extended, secret meetings between Mr. Kissinger and North Vietnam's Le Duc Tho in Paris, revealed to offset criticism of the administration for diplomatic inaction.

These negotiations were not exceptions to the pattern, they were the pattern.

The most decisive moves in the U.S.-Soviet Strategic Arms Limitation Talks, the subject that interested Mr. Kissinger more than any other, were conducted through "back channels"—Mr. Nixon and Mr. Kissinger to Soviet Ambassador Anatoly Dobrynin in Washington and Soviet leader Leonid Brezhnev in Moscow. Often the secretary of state, at the time William Rogers, and the defense secretary, Melvin Laird, were unaware of what was happening, as were the official U.S. SALT negotiators.

The closed system inevitably generated suspicion, tension, even spying. The Joint Chiefs of Staff in 1970-71 received top-secret Kissinger records pilfered from his office. The White House, in turn, obtained Pentagon information through a "back channel" without Mr. Laird's knowledge.

There was also a third layer of activity—behind Mr. Kissinger's back. This was the inner circle of the White House—Mr. Nixon's staff chief, H.R. Haldeman, and John Ehrlichman primarily, the principal pre-Kissinger confidants of the president.

"At times," Mr. Kissinger said privately after the Nixon administration disappeared, "I did not know if I was the director of a play, or an actor in it."

Mr. Kissinger's appointment to replace Mr. Rogers as secretary of state in September, 1973, had itself been a product, ironically, of Watergate, according to the memoirs of Haldeman.

Mr. Nixon's choice of Mr. Kissinger, Haldeman wrote, appeared due to "the weakening of the administration after the Watergate crisis. Mr. Nixon, in other words, had needed Mr. Kissinger's prestige to try to shore up his own.

When Mr. Kissinger came to the White House, the hawks on the political right were convinced that Mr. Kissinger was one of their own. Mr. Kissinger, a noted anti-Communist academic analyst, had advocated, in 1957, a strategy of "limited nuclear war."

Political Left

On the political left, the doves hoped the hawks would be proved wrong. Mr. Kissinger had later rolled back from that concept, served as chief foreign policy adviser to Nelson Rockefeller in the 1968 campaign against Mr. Nixon, and repeatedly expressed alarm about Mr. Nixon.

Hawks and doves discovered slowly that they were equally mistaken. Mr. Kissinger fitted no permanent mold, except pragmatism. He exploited the conflicting expectations to help to disarm both camps.

The basic Nixon-Kissinger design transcended ideology, reversing U.S. policy toward China to play on the rivalry between Moscow and Peking. The shift on China dismayed the hawks. But it was also based on a more venturesome use of U.S. force. That dismayed the doves.

To draw the Soviet Union away from world adventurism and toward acceptance of international order, the Nixon-Kissinger strategy devised a carrot-and-stick pattern—rewards for good behavior, penalties for bad.

But how to make "the stick" credible? By demonstrating that the United States was not predictable or fearful of employing force, it would deliberately display "unpredictability."

What was not in the original Nixon or Kissinger design was the dimension of Mr. Kissinger's own role.

World Celebrity

What transformed an intense, bespectacled former Harvard professor who nervously bit his fingernails, a Jewish refugee from Nazi Germany who speaks with a thick German accent, into a world celebrity? Mr. Kissinger provided one answer with an epigram. "Power," he quipped, "is the ultimate aphrodisiac."

That was essence, but not all of it.

The mixture of policies with which he was identified enabled him to operate across normal adversary alignments. Strong opponents of the administration's Vietnam policy, such as Senate Democratic leader Mike Mansfield and the Senate Foreign Relations Committee chairman, William Fulbright, who were enthusiastic supporters of U.S.-Soviet détente and the China opening, ranked among Mr. Kissinger's most influential champions. Mr. Kissinger was perceived by Republican and Democratic liberals as the primary defense against what the late Secretary of State Dean Acheson called "the primitives"—who included, ironically, Mr. Nixon, when he was a congressman.

As Mr. Kissinger's prestige soared, so did resentment inside the White House that he was stealing glory that belonged to the president. But Mr. Kissinger was indispensable to the system. He was the most effective instrument the administration had to counteract the grimness and grayness of the Nixon White House, to sustain its support in Congress, the press, the nation.

As secretary of state, Mr. Kissinger found that his liabilities expanded far more than his power. When his official base was the White House alone, he had freedom of choice on subjects that interested him. His interests stopped short of the entire range of economics (except for "the carrots" to sustain U.S.-Soviet détente), Latin America, Africa, the Middle East (handled by Mr. Rogers, largely because Mr. Kissinger's Jewish origin was regarded as an impediment for dealing with Arabs). As national security adviser, Mr. Kissinger held no official responsibility for any part of the world. Now, as secretary of state as well, every crisis from Sept. 22, 1973, onward was his.

Greatest Move

The October war in the Middle East erupted within two weeks. And with it came the Arab oil embargo and the quadrupling of oil prices, stunning the world economic order completely beyond the reach of Mr. Kissinger's global design.

Mr. Kissinger plunged into the Arab-Israeli conflict with what stands as his most imaginative, manipulative move. He arranged a cease-fire deliberately timed to deny Israel a crushing victory of Egypt; put Egyptian President Anwar Sadat and other Arab leaders in his debt for that; and made the United States the power broker in the Middle East through his shuttle diplomacy, supplanting Soviet influence.

Only afterward did widespread controversy develop about the costs and consequences of his strategy. His prestige was at its peak. Mr. Nixon was drowning in Watergate. Mr. Kissinger was virtually president for foreign affairs, and he entered the Ford administration in 1974 as the principal survivor of Watergate, with what appeared to be enhanced power.

But Mr. Nixon had been Mr. Kissinger's insulation. For years many hawks and doves in Congress had resented the way Mr. Kissinger played them off against each other, but they disliked Mr. Nixon more. With Mr. Nixon gone, so was Mr. Kissinger's inviolability.

Cyprus supplied the rationale for the congressional revolt against Mr. Kissinger.

He initially paid little attention to the coup backed by Greece's military junta that overthrew the President of Cyprus, Archbishop Makarios, on July 15, 1974. The Nixon administration was in its dying weeks.

Dam Burst

The failure of Mr. Kissinger to block the Turks from invading Cyprus and seizing nearly half of it, after a democratic government took power in Greece, produced an uproar in Congress. Congress set out to cut off military aid to Turkey on what Mr. Kissinger argued was "a legal technicality," the use of U.S. weapons in the Cyprus invasion. Mr. Kissinger insisted that national interests were overriding—that Turkey was a major U.S. and NATO ally which must not be alienated.

By this stand, Mr. Kissinger unwittingly had given critics on all sides of all issues a prime target—he had put himself "above the law." The dam burst.

Over a two-week period, with crushing defeats for the new Ford administration in the House and Senate, Mr. Kissinger was excoriated for methods, tactics, abuse of power; for his Vietnam diplomacy; for covertly undermining the Chilean government; for his "tilt toward Pakistan" in its war with India; and for "immoral" support of authoritarian regimes everywhere, with U.S. arms sales around the world at their highest level. Doves and hawks, for conflicting reasons, flayed Mr. Kissinger from all directions.

Thereafter, he alternately tried counterattacking Congress and appealing to it, with more failure than success. In its post-Watergate investigating zeal, Congress kept turning up new skeletons in the closets of the Nixon administration, as well as the Kennedy and Johnson administrations, fanning the controversy about the morality of covert operations abroad.

Mr. Kissinger did not conceal, but also rarely advertised, his conviction that there must be literally no restraints on counter-intelligence, espionage, paramilitary operations, electronic eavesdropping and virtually every form of cloak-and-dagger activity that could serve U.S. strategy abroad.

When William Colby, in his final days as director of central intelligence, turned into a cooperative witness in congressional investigations, Mr. Kissinger acidly remarked in private, "Colby only goes up to the Hill to confess."

Now Mr. Kissinger was compelled to seek compromises with Congress. However, on U.S.-Soviet détente, the stretch was too far on linking Soviet trade with congressionally demanded freer emigration of Soviet Jews. The effort collapsed. Mr. Kissinger bitterly complained that Congress was denying "the carrot" of détente as well as the stick.

He turned prodigious energy in other directions, especially the world economic dilemma caused by the multiplication of oil prices, and the problems of world food supplies, raw materials, the seabeds—all subjects which previously interested him not at all. After a false start, he restored a cooperative spirit between the United States and Western Europe, and also with Japan, repairing allied strains caused by his earlier concentration on Soviet and Chinese diplomacy.

But Mr. Kissinger's earlier relationship and influence with Congress remaind beyond recovery. They clashed head-on with the old mistrust over a final Ford administration attempt to prevent Communist defeat of the routed South Vietnamese Army in April, last year, which Congress rejected. And when Mr. Kissinger urged Congress last winter to continue the originally covert CIA funding of anti-Communist factions in Angola, fighting Soviet-supported, Cuban-reinforced factions, he was overwhelmingly refused.

Since then, a seemingly "new Kissinger" has emerged as the champion of human rights and black majority rule in southern Africa, and the peace broker for Rhodesia and Namibia (South-West Africa), to the joy of many U.S. liberals and the condemnation of the right.

But Mr. Kissinger's view of the world, which is essentially tragic, has not changed. Nor have his concepts. In Africa, he was adapting to compelling circumstances, as he frequently has done, to pursue the same objective from a different direction. It is not correct, or even fair, to label him a hawk-turned-dove. Mr. Kissinger falls into no simplistic pattern. He is bound to prove that in his memoirs and elsewhere when he leaves office.

He is an often brilliant pragmatist, perhaps the most resourceful ever, who sought by every device to manipulate the world into order. The end was accepted, but not his design, and he was impaled over the means.

David Levine.

Interstate Road System, 20 Years Old, Liberates America

By William K. Stevens

PEKA, Kan., (NYT).—No bands played. No birthday ies were given. Few people abouts were even aware of occasion—not even here in wide open spaces, where sighways are not only an inrable part of the free life almost an article of faith.

at is perhaps one measure of thoroughly taken for granted how deeply embedded in rican life, the greatest public s project in history (so it is d) has become.

enty years ago, an eight- stretch of concrete roadway opened to traffic in the subtly ing flint hil's 6 1/2 miles of Topeka. With that, the ion of the Interstate High- System began in earnest. The mile segment of what is Interstate 70 was the first he country to be completed funds provided by the Fed- Aid Highway Act of 1956, law that effectively brought Interstate System into being ying 90 per cent of its cost o decades later, it is clear the impact of the Interstate n on the national life has immeasurable. It has ex- d the practical horizons of everyday citizen by leagues ecome the ultimate agent of liberation from the bonds of aphy.

Draughts of Space'

th Walt Whitman, he can "I inhale great draughts of , the East and the West nine, and the North and the -are mine."

e system has drawn the ns of the country closer to- r. It has changed the com- patterns of commerce, work recreation, altered its per- relationships and even its ptions. Distance is now con- d in hours instead of miles. e Interstate highways have fortunes for some and ruin- hers, meant prosperity for towns and stagnation for , created a whole new class reeway bases near inter- ges across the continent.

system has saved tens of ands of lives, but is attacked concrete juggernaut that has ravaged nature and de- ed cities.

has been a major instru- in rearranging the face of urban United States, speed- he flow of people and busi- s outward, helping to create clusters of social organiza- on the outer fringe, and ng to dim the lights of cen- cities built around other s of transportation.

e superhighways have, in- become the centerpiece of nsportation system based holmingly on motor vehi- and as such they have push- he railroads into indefinite e.

ume who see this as a ter for the mass-transit of the big cities, the In- ate System is a major road ofit for the "highway trust," e "road gang," or the "high- waymen"—the alliance of auto, oil, construction, rubber, asphalt, limestone and trucking interests that has been the system's biggest promoter and protector.

After 20 years the system is still to be finished. It was to have been completed by 1972. To 1976, about 38,000 of its projected 42,500 miles are open.

It has cost tens of billions of dollars more than the $27 billion that was estimated at the start—$62 billion so far, with estimates of the eventual construction price tag ranging from $80 billion to $100 billion.

Vocal segments of the urban population have rebelled against the system, delaying or blocking its extension into city after city.

What It Was Like

But the system is unquestionably there. Some say it is difficult to remember what the country was like without the interstates.

John Montgomery sr. remembers when it was otherwise. Now the editor of the Daily Union at Junction City, about an hour's drive west of here on I-70, he is a former state highway commissioner who was present at the opening of that first eight-mile stretch 20 years ago.

Like millions of other Americans, he recalls when the main highways were two-lane roads, with unimproved shoulders, often with sharp curves and no sight lines to oncoming vehicles.

"I wonder how the hell we lived through that period," Mr. Montgomery says. Many motorists didn't. In 1956, 6.28 Americans died in traffic accidents for every 100 million miles traveled. By 1974 the figure had dropped to 3.57 deaths, and the interstate highways are viewed as a major reason for the drop. The rate on the interstates in 1974 was 1.55 deaths.

Before the interstates, Mr. Montgomery remembers, "you'd get up early and drive until late in the afternoon, and if you made 300 miles a day you were really doing something."

One measure of what I-70 means in practical terms is that from eastern Kansas the ski resorts of Colorado are more than 500 miles away—but only a day's drive. The long vacation weekend has become feasible.

In the early days of the interstate program, it met with general acceptance from motorists, as a dream come true.

And as they traveled, and the system expanded, they helped provide instant riches for those who owned land near rights-of-way.

Restaurants, motel chains and gasoline stations coalesced near the interchanges into latter-day travelers' watering spots with a kind of standardized, middle-class plushness that is embraced by millions of travelers for its reliable familiarity—and avoided by others.

The Sufferers

However, if I-70 gave Mr. Montgomery's Junction City six new motels, numerous restaurants and an economic boost, it siphoned traffic from Routes 24 and 38, Kansas's other east-west roads. Little towns along those two-lane highways suffered.

The interstate whisks most travelers right past most of the byways where U.S. distinctiveness dwells.

Three miles off I-70, in the town of Alma, for instance, is what amounts almost to an old-time Western saloon, minus six-guns, where men in 10-gallon hats shoot pool and drink Coors beer and play cards. It is a piece of Americana invisible to the interstate motorist.

But there is another side. Also in Alma is a fine little restaurant known to many people along the Manhattan-Topeka-Lawrence-Kansas City axis. People from those towns frequently visit the restaurant. Without I-70, many say, the trip would be too long and inconvenient.

Thus, I-70, like some strips of interstate elsewhere, seems to have knit northeastern Kansas together much more closely than it used to be.

From an economic standpoint nationally, the interstates have speeded delivery of goods substantially, resulting in numerous savings.

For millions of migrants, the interstates have provided an easy route to opportunity. They undoubtedly speeded the flow of Southerners to the industrial cities of the Northeast and Middle West, increasing the social pressures in those cities.

And as blacks from the South flowed increasingly to the North, the interstate provided easier-than-ever access to the far suburbs and exurbs for whites. Instead of 10 miles out, say, it became practical to live 25 miles out of the city.

All of this intensified the shrinkage of the central city's tax resources. At the same time, interstate spurs in many cities slashed indiscriminately through neighborhood after neighborhood, sundering them in two or destroying them altogether. This further weakened the city's social fabric, in the view of many critics.

Critics Join Forces

By the late 1960s, such critics had joined forces with environmentalists who saw the superhighways as disturbers and destroyers of streams, hills, woodlands, marshes and rock formations.

The result of the alliance: In the 1970s, almost every major city in the country has a highway controversy. And, in many instances, further incursions of the interstate into the urban United States have been stopped.

Further struggle over environmental matters undoubtedly lies ahead. So too does contention over how the Federal Highway Trust Fund should be used. This is the fund into which highway-user taxes are paid to finance the interstate system. Now that the interstate system is nearing completion, how should the fund's revenues be used? To improve arterial roads and bridges in the countryside? To expand and improve mass transit in the cities?

However such questions are resolved, there is much truth in a statement once attributed to Sen. Lee Metcalf, D-Mont., who has been interested in preserving the environment from highway incursion.

"The cloverleaf," he was quoted as saying in 1966, "is becoming our national flower."

United Press International.

By 1962, when this photo was taken, the freeway had made its mark on Kansas City.

Sundays in the Forest

West Berliners March to Bar Power Plant

BERLIN (NYT).—Every Sunday for the last six weeks, many hundreds of West Berliners have marched to Spandau Forest on the outskirts of the city to protest plans to make room for a new power plant by cutting 55,000 trees.

The battle for the trees is just one of many skirmishes that have been erupting with growing frequency here and in West Germany. The skirmishes pit conservationists and naturalists against government agencies and city planners who are often more concerned with the threat of an energy gap and the growth of industry than with protecting the environment.

"Before authorities start chopping down the trees we'll be there to prevent the operation," said 24-year-old Peter Schneider, one of the demonstrators. Mr. Schneider, who is about to graduate from a teachers college, said he was deeply involved "in the struggle to keep the air clean."

Popular Movement

The project at Spandau is for a conventional power plant, not an atomic reactor. Public opposition to the spread of nuclear energy, but also to more mundane construction projects that some citizens consider harmful or unnecessary, has grown into a forceful popular movement all over West Germany, frequently slowing projects or stopping them.

On Nov. 13 in Brokdorf, near Hamburg, policemen using clubs and water cannon battled rock-throwing demonstrators protesting the building of a nuclear power plant. Thousands of people from all parts of the country walked several hours to avoid police roadblocks to reach the site.

In West Berlin alone, more than 100 action groups and citizens' associations have sprung up in the last three years to fight specific projects—an automobile tunnel that would cut through a residential area and touch a medieval church, the widening of streets into highways, the tearing down of landmarks for high-rise office buildings.

Some of these projects, like the auto tunnel, were abandoned because of the protests. But the issue of the power plant is considered different.

"We are going to begin construction sometime this winter," said Klaus Hatzel, an administration spokesman, "because otherwise we might have to shut off households from electricity by 1980. Nobody wants that."

West Berlin, an enclave in East Germany, is not attached to the West European power grid. A project to get electricity from the Russians in return for building a nuclear power plant at Kaliningrad, formerly Koenigsberg, fell through earlier this year because of opposition by East Germany, whose territory the line would have run through. Thus the city has to rely on local energy production.

Mr. Hatzel called the protesters "nature apostles" who had no insight into West Berlin's economic necessities. But the marchers at Spandau felt differently.

"We have more than 20,000 signatures of people who want to protect the forest," Mr. Schneider said. "We are kindling a spirit to fight for citizens' rights."

The Rev. Klaus Wiesinger, pastor of the Protestant St. John's Church in Spandau and one of the organizers in the battle for the trees, said his group sought to halt construction through peaceful means. He said that not all alternative sites, places where there would be less destruction to nature, had been explored.

U.S. Money Supply Growth Slows

NEW YORK, Nov. 21 (NYT). —The rate of growth in the U.S. money supply slowed slightly in the last few weeks, the Federal Reserve system has reported.

The narrow money supply, called M-1 and defined as demand deposits and currency, declined \$100 million in the week ended Nov. 10 to an average level of \$310.4 billion. During the four weeks ended Nov. 10, the money supply averaged \$309.9 billion, which represented an 8.4-per-cent annual rate of increase from the average level during the four weeks ended Oct. 13.

The broad money supply, M-2, which also includes consumer-type time deposits and savings deposits at commercial banks, rose \$1.5 billion in the latest week, and brought the level for the four weeks ended Nov. 10 to \$728 billion. This represented a 1.2-per-cent rate of increase from the \$720.7-billion level in the four weeks ended Oct. 13.

The 8.4-per-cent and 13.2-per-cent rates are substantially slower than rates of growth over comparable periods reported only a few weeks ago.

In testimony before Congress this month, Arthur Burns, chairman of the Federal Reserve, announced the latest monetary growth targets for the third quarter of 1976 to the third quarter of 1977. For M-1, the target range is now 4 1/2 per cent to 6 1/2 per cent and for M-2, 7 1/2 per cent to 10 per cent.

For the month of November, both M-1 and M-2 are at the upper end of their implied target ranges, but some analysts say the Fed will not take action to raise the federal funds rate at this time.

Commercial and industrial loans at major New York City banks rose \$174 million in the week ended Nov. 17, the Federal Reserve Bank of New York reported. Between \$150 million and \$160 million of the increase was in bankers' acceptances. These trade bills, whose payment is guaranteed by a bank, are money-market instruments classified by the Fed as business loans. They have accounted for \$1.5 billion of the \$1.7-billion increase in New York City business loans in the last three months.

These Debentures having been sold, this announcement appears as a matter of record only.

Prices of Eurobonds Recover Despite High Volume of Issues

By William Ellington

...NDON, Nov. 21 (AP-DJ).—...ond prices recovered last ...as it became obvious that ...arket could easily cope with ...h volume of offerings.

...a week before, the market ...been subjected to a sub...ial selloff based on concern ...many banks and other un...iting institutions might un...bonds on the market to dress ...heir balance sheets for the ...end period. Some dealers ...still worried about this pos...ty, since it is believed that ...aps up to a quarter of the ...illion or so of the new issues ...ed so far this year are still ...he hands of these institu...

...vertheless, the available evi...e indicates that banks are ...content to have fixed-rate ...s on their books, due to the ...that commercial loan de...will remain sluggish for ...time.

...e bellwether offering this ...was a $100-million, 10-year ...of New Zealand govern...bonds bearing 8.25 per cent. ...gh market conditions were ...at the time of the offer...the issue nevertheless en...ed very strong investment ...particularly from Swit...nd. Consequently, the issue ...priced at a premium of 100.25 ...yield 8.21 per cent. In the ...market, it was quoted at ...100.

...mong other offerings this ...k was a $75-million, 10-year ...e of Midland International ...ancial Services BV. The Mid...d Bank-guaranteed bonds, ...ch have an average life of ...years, were priced at 99 bear...8.75 per cent to yield 8.91 per ...

...he yield was only slightly below a $40-million 15-year issue of Skandinaviska Enskilda Banken offered at par bearing 9 per cent. The average life for the Skandinaviska bonds came to 9.75 years. However, as of Friday, neither of these bank issues has traded.

Another offering this week was a $15-million, five-year note issue of OKI Electric Industry under guaranty of Fuji Bank. The notes, which were priced at par bearing 8.25 per cent, performed well in the secondary market. A quote Friday was 99.25-100.

A $20-million, 15-year convertible bond issue of FCI International Finance NV, a subsidiary of Fairchild Camera & Instrument Corp., was offered this week at par bearing 5.75 per cent annually.

The conversion price was set at $45.50 per Fairchild Camera share, or a 14.83-per-cent premium above the price of the common stock at the time.

The premium was apparently considered by investors to be a bit large, since the bonds started trading at 98-99, but when New York stock prices moved up later in the week, the price of the bonds rose to 99-100.

Though the market in Canadian-dollar-denominated Eurobonds was upset for a while by gyrations of the Canadian dollar following a local election victory of Canadian separatists, the Canadian offerings this week got a fairly good reception.

A $30-million (Canadian), seven-year notes issue of the Province of Nova Scotia was priced at par bearing 9 per cent, while a $25-million (Canadian), five-year note issue of Canada Trustco Mortgage Co. was priced at par bearing 9.25 per cent. Both issues were quoted Friday at 98.75-99.25.

Conditions were quite buoyant in the deutsche mark sector of the Eurobond market this week as Swiss banks stepped up their investment. A 100-million-mark, eight-year note issue of the European Investment Bank was offered at 99.25 bearing 6.75 per cent to yield 6.89 per cent, the lowest level for this type of prime credit in some years.

During the selling period, the coupon rate was lowered twice in quarter-point stages from the original indication of 7.25 per cent. Despite this, the issue traded Friday at 99-99.25.

Several new issues were scheduled this week. Among them was a $25-million, 10-year bond issue of Polysar Ltd., a petrochemical company owned by the Canadian government. The bonds, which have no early retirement features, are expected to bear 9.5 per cent.

There is also a scheduled $100-million, 18-year issue of Crédit National, which will be guaranteed by the French government. The French lending agency's bonds are expected to bear 8.5 per cent and have an average life of about eight years.

Also in the market is a $50-million, seven-year note issue of the Spanish railways. The notes, guaranteed by the Spanish government, have an anticipated coupon rate of 9.25 per cent.

Market Volume

	Nov. 19	Nov. 12
Cedel	$682.0 mil.	$980.7 mil.
Euroclear	$1,154.2 mil.	$560.2 mil.

New York Stock Market

NEW YORK, Nov. 21 (NYT).—Stock and bond prices soared last week in active trading that took Wall Street most pleasantly by surprise. The Dow Jones industrial average bounded ahead 21.11 points to finish at 948.80, after having dropped more than 37 points in the two previous weeks.

The broad list of stocks outperformed the blue-chip Dow's and scores of issues—from Blue Bell and Financial Federation to Natomas and Soo Line—surged to their highest prices of 1976.

A combination of factors, some real and some imagined, provided the fuel for the dynamic rally. Hopes were kindled that the rise expected in foreign oil prices—a market depressant in recent weeks—might be postponed or else spread over a period of time. There were also hopes for an early tax cut if the business slowdown continues.

On Thursday, the Dow bounded ahead 12 points to score its best advance of the month.

On Friday, Morgan Guaranty Trust, in a surprise move, reduced its prime rate to 6 1/4 per cent from 6 1/2 per cent. Meanwhile, consumer prices in October rose at a 3.6-per-cent annual rate, or the slowest pace in seven months, thus providing good news on the inflation front.

New York Stock Exchange volume set a new annual record on Friday. The total turnover so far this year reached 4.714 billion shares, thus topping the former peak, set in 1975, of 4.693 billion shares. There are 28 trading days remaining for this year.

The slow pace of the economic recovery, meanwhile, and the signs of abating inflation sent prices ahead in the government securities and corporate bond market; double-A rated utility bonds, for example, traded at around 8.40 per cent, or close to their lowest yields of this year.

The U.S. Economic Scene

Wall Street Is Elated by Carter's Comments

By Thomas E. Mullaney

NEW YORK, Nov. 21 (NYT).—Wall Street and the business world finally heard some of what they had been hoping for—but hardly expecting—from President-elect Jimmy Carter last Monday.

In their view, Mr. Carter's comments on dealing with unemployment, wage-price controls, the importance of the private sector of the economy and cooperation with Arthur Burns, chairman of the Federal Reserve Board, were all reasons for elation.

The financial markets immediately responded with strong rallies and they continued to move moderately upward for most of last week with added encouragement from indications that the oil-exporting nations might delay or reduce their price-increase goals.

It was the moderate tone of Mr. Carter's remarks, as well as the indication that he will be deliberate in making key appointments and in moving toward any dramatic new economic policies, that surprised and delighted businessmen and financial analysts.

However, as one prominent banker observed, "It will take more than moderate comments from one press conference" to really instill greater confidence in the business world and induce some evidence of it in the form of increased capital spending, inventory buying and other commitments.

Concrete Response

A better reading of what is ahead for national economic policy—and a more concrete response from business and the markets—will no doubt be available when the new president starts to announce his major appointments and it becomes apparent what influence the new people exercise in the adoption of actual policies on taxes, unemployment and other key issues.

At the moment, the business world most welcomes Mr. Carter's statement that he "guessed" he "could work well with Mr. Burns if he should stay on as chairman, which, I think, is the most likely prospect."

Since business and financial people, for the most part, tend to support the conservative economic views of the Fed chairman, particularly his passionate fears of greater inflation, the President-elect's conciliatory attitude is most welcome. Mr. Burns, for his part, has indicated he felt he could cooperate with the new administration.

There will almost certainly be differences, however, especially in the crucial area of reducing taxes early next year, if the economy does not pick up speed by that time.

Mr. Carter and Mr. Burns both have said they have open minds on that basic question. But some of the President-elect's advisers have been advocating a one-shot tax rebate or reduction weighted for low-income consumers, while the Fed chairman tends to support across-the-board reductions, if any should be deemed necessary, for business as well as the public.

Meanwhile, the slowdown in the expansion is continuing. After real growth at a rate of more than 9 per cent in the first quarter, the second and third quarters averaged around 4 per cent each and the current quarter may show growth of no more than 2 per cent—certainly very low and very disappointing. But analysts tend to forget that only a year ago, real growth was only about 3.3 per cent in the fourth quarter.

Leap Upward

Expectations became too expansive after the first quarter's unusually buoyant and unsustainable leap upward. And now, there is excessive pessimism and frustration because the expansive expectations have not been fulfilled.

Forgotten is the fact that the economy and other economic series fluctuate from time to time around a long-range trend. And the longer trend still seems to be upward—and more strongly than recent experience would indicate.

For months, many analysts have been saying that the slower pace of the recovery does not reflect any innate problem with the

(Continued on Page 11, Col. 1.)

U.S. Commodities

CHICAGO, Nov. 21 (AP).—Farm commodity futures were mostly higher last week on the nation's major exchanges.

Gains were relatively small for the wide price swings that were executed. Losses were not too severe.

When trade ended for the week on Friday, soybeans were 1/2 cent a bushel lower to 23 cents higher, January 6.77; wheat was 2 to 9 3/4 higher, December 2.59 1/2; corn was 6 to 7 1/2 higher, December 2.39 1/3; oats were 2 1/4 to 3 1/4 higher, December 1.55; soybean oil was 5 to 30 points lower, December 22.05; soybean meal was $3 to $12.80 a ton higher, December 191.50; and iced broilers were 10 points lower to 45 higher (about 1/2 cent a pound), November 36.95.

Live cattle futures closed on a steady tone to $1.22 per hundred-weight higher, while live hog futures were steady to 65 cents higher at Friday's bell. Pork belly futures gained 92 points for the week, while shell eggs declined 170 points.

Export commitments improved sharply over last weekend and futures were actively bought when trade opened. There was some profit-taking, but after a government spokesman stated that soybean acreage probably would be higher next year, new selling developed. The Peruvian fishmeal haul still was hobbled by strikes of fishermen, and there was talk of increased exports of feed grains and meal to feed Eastern Europe's expanding livestock and poultry populations. These two factors were instrumental in buying at week's end.

The harvesting of soybeans was ended in the Middle West, but there was some of this work to be done in the South. Corn harvesting was about ended.

Firmness in feed grain prices and a projection of higher beef prices in 1977 tended to influence buyers of live cattle futures. A more stable cash hog market and strength in grains were buying factors for live hog futures.

Pork belly futures buyers looked to increased bacon movement from storage and only a small input. The pork belly storage supply Nov. 1 was the smallest for the date in 10 years. Shell eggs came under liquidating pressure on reports of resistance to retail level prices and some easing in consumption.

FedMart — the spot for smart shoppers

This announcement appears solely for purposes of information.

New Issue — November 19, 1976

906,000 Shares

The Fed-Mart Corporation

Common Stock
(without Par Value)

The Fed-Mart Corporation is issuing to its shareholders transferable rights to subscribe for additional shares of its Common Stock. Two Rights will be issued for each share held of record at the close of business on November 17, 1976, and three Rights are required to subscribe for each new share pursuant to the Basic Subscription Privilege. In addition, shareholders will be offered additional subscription privileges pursuant to the Step-up and Oversubscription Privileges, as more fully set forth in the Prospectus.

The Subscription Offer will expire at 2:00 P.M., San Francisco Time (5:00 P.M., New York Time), on December 8, 1976.

During and after the subscription period, the Dealer-Manager may offer, at prices set from time to time by it, shares of Common Stock of the Company acquired by the Dealer-Manager, through the purchase and exercise of Rights or through the exercise of the Dealer-Manager's option to purchase Unsubscribed Shares, as more fully set forth in the Prospectus.

This announcement is not an offer to sell or a solicitation of an offer to buy these securities. The offering is made only by the Prospectus which may be obtained in any State in which this announcement is circulated from the undersigned and such other dealers as may lawfully offer these securities in such State.

BACHE HALSEY STUART INC.
Dealer-Manager

Economic Scene

(Continued from Page 9)

...omy itself. The fact that ... business sales continued to ... strong gains, they say, ...ed that the recovery was ... vigorous, but its expansion ... held back by a variety of ... and caution on the part of ...ness leaders.

...hen businessmen are uncer-... over what lies ahead—wheth-...he the outcome of a national ...tion or some international ...on—they tend to operate very ... to the vest, delaying some ...range commitments, main-...ng a tight rein on inventories ...concentrating on current operations to increase corporate liquidity and maximize profits. They worry about getting adequate rates of return in the future.

Those are exactly the things that many businessmen have been doing the last six months as they contemplated the likely election of a Democratic administration. They believed that a Carter administration would be more concerned with unemployment than inflation, that it would stimulate consumer spending, rather than business expansion, that it would "bust the budget" with an array of new social programs and that it would adopt a program of mandatory wage and price controls (and perhaps profit restrictions as well).

Has the uncertainty been overdone? As Mr. Burns said the other day, "Uncertainty is a part of life." But it does appear that this time around it has been excessive.

Mr. Carter may have taken a firm, forward step last week to reduce business uncertainty. In addition to his comments about Mr. Burns, he made these reassuring remarks:

"By targeting specific programs in a counter-cyclical fashion in communities or among groups who have the highest unemployment, the aspect of inflation that derives from employment efforts could be minimized.

"We will be evolving alternative [tax] plans, and . . . depending upon which aspect of the economy needs the greatest stimulation . . . and whether it should be a one-shot tax rebate or a continued process . . . would be decided in the future.

"I would certainly like to adhere to my policy of avoiding mandatory [wage-price] controls.

Balanced Budget

"I believe in balanced budgets and, before my term is over, I intend for the federal budget to be balanced. I don't believe in wasting money.

"When there's a choice to be made between the private sector and the government sector, my option would be for the private sector to assume the responsibility."

Those statements may indeed reflect, as some supporters of Mr. Carter maintain, that, while he may well be an activist, he is also pragmatic and more fiscally conservative than many businessmen and others generally believe.

In saying what he did and in promising to meet with business and labor leaders and other groups for their views on appointments and policies, the President-elect is showing at an early stage that he recognizes the need for confidence among many groups in the nation—and the need to broaden the input he gets from what had been until now a relatively small group of advisers.

...perts Predict ...w Grain Sales ...U.S. to Russia

...SHINGTON, Nov. 21 (UPI). ...scow might try to purchase ...20 million metric tons of ...grains a year through 1980 ...eet continuing agricultural ...ages, according to CIA and ...mic experts.

...conference last week academ-...nd government specialists at ...Kennan Institute for Advanc-...ussian Studies examined So-... agricultural problems.

...e experts did not reach a ...ensus on the size of probable ...et imports. But a CIA ex-... on the Soviet economy, ...las Diamond, for one, esti-...ed the Soviet Union might ... up to 20 million tons of ...grain annually to offset ex-...ed harvest shortages during ...1976-1980 period.

...der the recent U.S.-Soviet ...en must buy 6 million tons a ...and may buy up to 8 mil-...lions without U.S. govern-... consent.

... Diamond estimated Soviet ...n production in 1980 would be ...nt 211 million metric tons, ... under the 220-million-ton ...ies objective. He said weather ...blems could increase the gap.

CAB Bids Ford Maintain Routes

WASHINGTON, Nov. 21 (UPI). —Disregarding Justice Department objections, the Civil Aeronautics Board has asked President Ford to formally approve a airline route swap last year eliminated overseas competition between Pan American World Airways and Trans World Airlines.

The board urged Mr. Ford to keep the route swap in effect until March 2, 1982, promising the arrangement would be terminated on that date.

Under the swap agreement—initially granted on the board's own authority and due to expire tomorrow by order of a federal court unless Mr. Ford acts first—TWA was freed of sharing routes with Pan Am in flights to Austria, France, Portugal, Italy, Spain and Morocco, and Pan Am was cleared of TWA competition in serving West Germany, southern India, Sri Lanka, Thailand, Hong Kong and Hawaii.

Maple Leafs Get Victory In NHL Play

TORONTO, Nov. 21 (UPI).—Darryl Sittler and Jack Valiquette each scored two second-period goals last night to power the Toronto Maple Leafs to an 8-3 National Hockey League victory over the Minnesota North Stars.

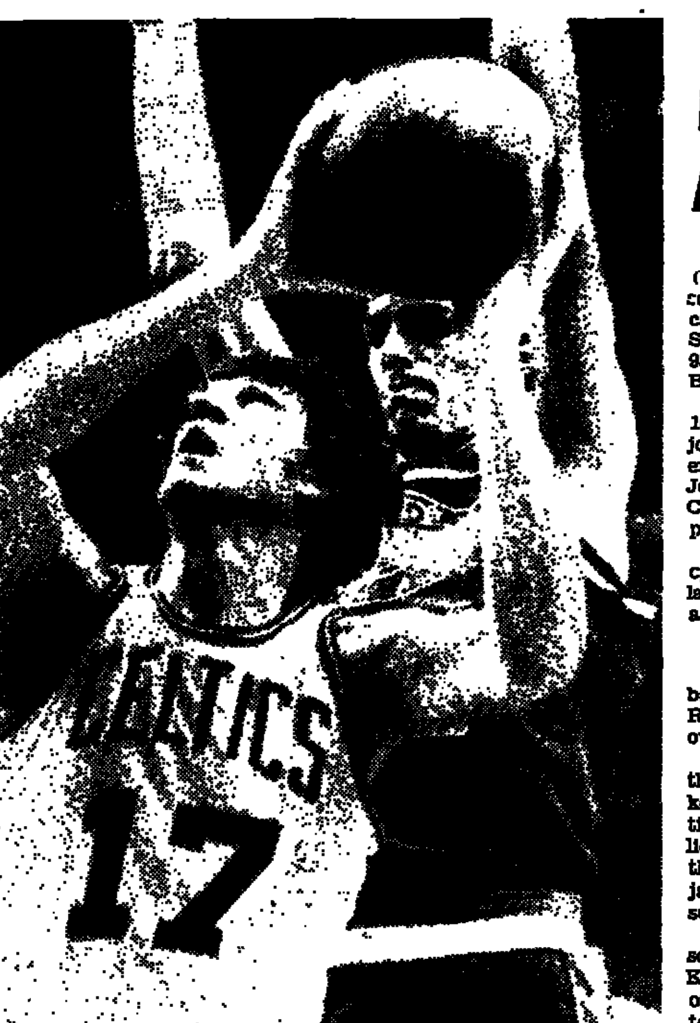
After Minnesota's Glen Sharpley scored the lone first-period goal at 12:32, Valiquette opened the middle period, beating North Stars' goalie Gary Smith at 51 seconds to begin a five-goal Toronto period.

Sittler, the Toronto captain, collected two quick unassisted goals for a 3-1 Toronto lead.

Rockies 5, Penguins 2

At Pittsburgh, goaltender Michel Plasse stopped 34 of 36 shots and Paul Gardner and Wilf Paiement scored two goals each to lead Colorado to a 5-2 victory over the Penguins.

Plasse, traded away by the Penguins before the season, was helped by three Pittsburgh shots hitting the goal post.



Gardner, the Rockies' first-round draft choice, scored his fourth and fifth goals in only his fourth game. His second goal was Colorado's second unassisted goal of the game, as both times Pittsburgh defenseman Dennis Owchar's errant passes wound up in his own net.

Sabres 4, Kings 3

At Los Angeles, Gil Perreault fired in a 35-footer with 32 seconds left to play to give Buffalo a 4-3 victory over Los Angeles.

Blues 3, Rangers 1

At St. Louis, Garry Unger's power-play goal at 2:20 of the second period—Unger's third power-play goal in the last two games—launched the Blues to a 3-1 victory over the New York Rangers.

Associated Press.

Celtics' John Havlicek shoots from under Nuggets' Bobby Jones after rebound battle at Boston Garden Friday.

Sports

Warriors' Barry Scores His 20,000th NBA Point

OAKLAND, Calif., Nov. 21 (UPI).—Forward Rick Barry scored the 20,000th point of his career last night as the Golden State Warriors breezed to a 130-93 victory over the Buffalo Braves.

Barry ended the contest with 16 points. The Warriors' captain joined eight other NBA performers in the elite 20,000-point club. John Havlicek of the Boston Celtics is the only other active player in that group.

Golden State blew the game open with a 16-2 scoring burst late in the second period to take a 63-45 halftime lead.

Rockets 127, Kings 126

At Houston, John Johnson's basket at the buzzer gave the Rockets a 127-126 overtime victory over Kansas City.

Johnson, who had 30 points in the game, scored the tying basket with 10 seconds left in regulation time. The Rockets had rallied from a nine-point deficit in the fourth quarter. Rudy Tomjanovich was the Rockets' high scorer with 35 points.

Ron Boone, the game high scorer with 37 points, had put Kansas City in front with a pair of free throws with five seconds to play in the overtime.

Bullets 109, Spurs 103

At Landover, Md., Phil Chenier made 16 of 22 shots from the floor and scored 34 points as Washington snapped San Antonio's six-game winning streak with a 109-103 victory.

Leonard Robinson scored 20 points and grabbed 10 rebounds and Dave Bing added 19 points and 12 assists as the Bullets won their second straight game and reached the .500 mark for the second time this season.

Pistons 116, Celtics 110

At Detroit, Bob Lanier scored 40 points and Kevin Porter set a team record with 20 assists in helping the Pistons fight off Boston, 116-110, to post their eighth victory in the last nine games.

Lanier, held to 10 points in the first half, scored 16 in the third period and added 14 more in the fourth quarter to boost his hot-shooting pace over the last 11 games to a 30-point average.

76ers 123, Hawks 106

At Atlanta, forward George McGinnis scored 12 points in a five-minute spree at the start of the fourth quarter to break open a tight game and propel Philadelphia past the Hawks, 123-106.

Atlanta took a brief lead at the start of the quarter, 85-84, but then Philadelphia, led by McGinnis, outscored the Hawks, 21-6, during the next few minutes to grab a safe 105-91 edge with six minutes left.

Guard Doug Collins led the 76ers with 33 points, McGinnis had 26 and Julius Erving scored 22.

Knicks 120, Nuggets 115

At New York, the Nuggets, who had lost only one game in the first four weeks of the NBA season, lost their second in two days, bowing to the Knicks, 120-115, despite 35 points from David Thompson.

John Gianelli led the Knicks with 19 and Walt Frazier had 18.

The Knicks took a 20-point halftime lead and their 74 points for the half was their season high. In the process, they overcame a first-quarter, 10-point deficit after less than three minutes of play when the Nuggets ran off 12 straight points in only 87 seconds. The Knicks quickly retaliated with eight points in less than two minutes.

BOOKS

TO KILL A COP

By Robert Daley. Crown. 325 pp. $8.95.

Reviewed by Richard R. Lingeman

CHIEF of Detectives Earl Eschied of the New York Police Department has a problem, and it is not the sensational, cold-blooded grease-gunning down of two policemen that kicks off Robert Daley's novel "To Kill a Cop." No, the chief's problem is more, well, personal. Seems he took a couple of suits on the arm (or is it on the pad?) for himself and his son from the department store owner who wanted the chief to fix a shoplifting arrest of the department store owner's son. Eschied couldn't help, but took the suits anyway and now the big shot has complained to the police commissioner, putting Eschied in line for criminal charges—not to mention the loss of his nice job that pays $40,000 a year plus perks, such as a chauffeur-driven car that trails him around the town on his dates as well as official business.

Well, this endearing bit of human fallibility is a sample of the stuff that puts Robert Daley's novel a cut above the usual police story, in which the main dramatic tension involves the commissioner fending off reporters with one hand while yelling at his men to solve the case quick, or His Honor will have his neck. Mr. Daley, who served as a deputy commissioner with the department, has made the politics in his novel considerably Byzantine, and internal.

Eschied, who is not really a bad sort, and a good detective, manages to sidestep the worst criminal implications of his misconduct with some fancy footwork, but he still has to find the murderers because his neck is on the block and the commissioner filling up all vacancies as t they show up with his own bo Finding the murderers, howev isn't easy; they are a small, boc gang of black urban terrori led by a Bobby Seale-Eldri Cleaver figure named Evel Walker, who plays Svengali the cold-blooded grease-gun man.

The most pleasure Mr. Daley's novel derives from his sar cynical insights into the bure cratic intrigues of the depa ment, as well as such perenn problems as amorous male-fem patrol teams, and inch social o as the generally racist ability of white cops like Eschied, know that blacks commit 65 cent of the crime in the city a knowing this, think they kr all there is to know. The ack down of the black r olution gang involves plodding, reali detective work, which re e to expect from our police-p cedure novels these days, I some pregnant asides on the bit rivalry between the Police partment and the FBI.

Walker and company ar very plausibly motivated, mak "To Kill a Cop" not much a political thriller. But when comes to police procedur Mr. Daley could have written manual.

CHESS

By Robert Byrn

It was a strong finishing kick that gave the United States team first place in the 22d World Chess Olympiad in Haifa, Israel. Trailing the Netherlands by 2 1/2 points at the end of Round 9, we took 14 points out of the last 16 games while the Dutch took only 11. Thus we scraped through to victory by a half point.

Wobbly and inconsistent in the early and middle rounds, the United States team thrived under pressure. Here are the individual results

United States Team

Board	Player	Won	Last	Draws
1	Byrne	5	1	4
2	Kavalek	3	2	3
3	Evans	5	0	4
4	Tarjan	3	2	2
5	Lombardy	6	1	2
6	Commons	6	0	3

Kim Commons won the gold medal for the best score as second reserve; moreover, he had the highest winning percentage of any player in the Olympiad.

William Lombardy had the second highest score as first reserve, while Larry Evans turned in the third highest second-board score.

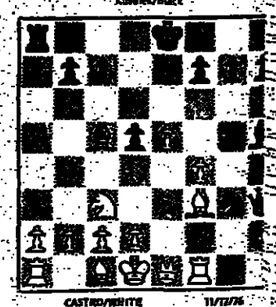
Neither Lubomir Kavalek nor James Tarjan, a gold medal winner in the previous Olympiad, played up to their usual trenchant form. Nevertheless, Kavalek produced several examples of incisive play.

In the Columbia-United States match, Oscar Castro confronted Kavalek with an unorthodox opening, but Kavalek pounced on it gleefully and put away a quick point.

Castro could have transposed into an old form of the Vienna Game with 4 N-QB3, but he impatiently aimed for a hybrid form of King's Gambit with 4 P-KB4, allowing Kavalek the sharp counterattack 4 . . . PxP; 5 PxP, P-Q4. There was already no perfect solution for White, especially since 6 P-K5; N-K5 yielded Black a dangerous knight outpost.

No Way to Strike Back

Kavalek's powerful 7 . . . B-QB4! inhibited castling while threatening to pick up the exchange the fork 8 . . . N-B7. Castro impotent to strike back wit P-Q4 because 8 . . . NxQP; 9 N Q-R5ch; 10 K-K2, Q-B7ch would have led to checkmate after K-Q3, QxNch; 12 K-K2, B-N5 13 B-B3, BxBch; 14 KxB, B7ch; 15 K-N4, Q-N7ch so on.



While Kavalek eliminated defensively useful white KN 8 . . . N-Q5 and 9 . . . NxP Castro hoped to bar the intrus of the black QB by 9 P-K Kavalek, however, skated aro the defense by the maneu 11 . . . B-B4, 12 . . . B-KN3 13 . . . B-R4.

Castro temporarily ducked of the fork 14 . . . N-N6 by pin 15 Q-K1, but after 15 QxRP, he had nothing be then to drop the exchange 16 BxB, QxBch; 17 N-K2, N

Instead, his inversion of mo with 16 N-K2 proved an e greater disaster—after 16 NxR; 17 BxB, N-R7, the wi KB found itself hung up.

The only way to retrieve it w 18 N-N3, and Kavalek burst t bubble at once with 18 . . . B threatening an annihilating with 19 . . . B-R5.

Observing that his 19 P-KR negated by Kavalek's 19 KN1, Castro had to give up.

KING'S INDIAN OPENING

	White Castro	Black Kavalek	White Castro	Black Kavalek
1	P-KN3	P-K4	11 K-Q1	B-B4

Weekend Football Results Solidify Lineups for Major College Bowls

W YORK, Nov. 21 (UPI).—
y all the major bowls set
lineups yesterday for the
tional post-season college
all clashes.
e of the top 10 ranked
s were selected to partici-
in bowl games with only
ranked Iowa State lacking
invitation. The Cyclones,
n yesterday by Oklahoma
42-21, are still in line for
astro-Bluebonnet or Tan-
Bowl berth.
is now the bowl pairings
up.

ROSE BOWL

(California vs. Michigan)

rd-ranked Southern Cal
an upset yesterday in
y beating favored second-
d UCLA, 24-14, on its home
to clinch the Pacific-8
ionship. USC, paced by
Bell's 167 yards rushing,
-0 with four minutes left
fourth quarter before the
s scored two meaningless
owns. USC's victory was
th in a row and gave the
its fourth Rose Bowl
in five years.
fourth-ranked Michigan
nines were also impressive
21-6 triumph over eighth-
d Ohio State to earn the
n title and their first trip
e Rose Bowl since 1972.
ing at Columbus, Michigan
shed a devastating attack
e second half after the
y played scoreless for 30
tes. Rob Lytle, Michigan's
ding leading rusher, ran for
yards in 29 carries and one
down, while Russell Davis,
ing Harlan Huckleby in the

starting lineup, ran for 83 yards in 23 carries and two touchdowns.

SUGAR BOWL

(Pittsburgh vs. Georgia)

Top-ranked Pitt and Southeast champion Georgia, both idle yesterday, officially accepted invitations to the 43d Sugar Bowl game on New Year's Day in the Louisiana Superdome. Georgia, 9-1 this season, beat North Carolina, 20-10, in 1947 and lost to Arkansas, 15-2, in 1969 in its only previous Sugar Bowl appearances. Pitt lost to Georgia Tech, 7-0, in its one previous Sugar Bowl game.

COTTON BOWL

(Maryland vs. Houston)

Maryland blanked Virginia, 23-0, behind freshman tailback George Scott's 124 yards rushing and two touchdowns to sew up a bid to the Cotton Bowl and then enthusiastically accepted to meet the Southwest Conference champion, probably Houston, which beat Texas Tech, 27-19, yesterday. Houston needs only a victory over lowly Rice next week to gain the Cotton Bowl berth.

The berth in a major bowl is Maryland's first since its last undefeated regular season in 1955, when it lost to Oklahoma, 20-6, in the Orange Bowl. The victory yesterday was Maryland's 15th straight and gave them an unprecedented third straight unshared Atlantic Coast Conference championship.

ORANGE BOWL

(Ohio State vs. Colo. or Neb.)

Ohio State took some consolation from its loss to Michigan when it received a bid to play in the Orange Bowl on New Year's night against either Colorado or Nebraska. Sixteenth-ranked Colorado earned a share of its first Big Eight title since 1961 yesterday by beating Kansas State, 35-28. Colorado, which beat Oklahoma, 42-31, earlier in the year, will go to the Orange Bowl if Oklahoma beats Nebraska on Friday. Nebraska, a 14-12 winner over Colorado, earns the bowl bid if it wins the upcoming game

GATOR BOWL

(Notre Dame vs. Penn State)

Substitute quarterback Rusty Lisch ran for two touchdowns and passed 42 yards to Dan Kelleher for another in leading Notre Dame to a 40-27 victory over Miami and the Irish took little time in accepting an invitation to meet Penn State in the Gator Bowl Dec. 27. Irish running back Al Hunter broke a 45-year-old season rushing record for Notre Dame when he gained 128 yards to boost his total to 943, 16 yards better than the mark set by Marchmont Schwartz. Notre Dame, 8-2 this year, will be appearing in its sixth post-season game in the last eight years. Penn State was idle yesterday but meets Pitt on Thursday.

PEACH BOWL

(North Carolina vs. Kentucky)

Kentucky rode a 62-yard touchdown pass from quarterback Derrick Ramsey to halfback Greg Woods to a 7-0 victory over Tennessee yesterday and a post-season tirp to the Peach Bowl in Atlanta on New Year's Eve.

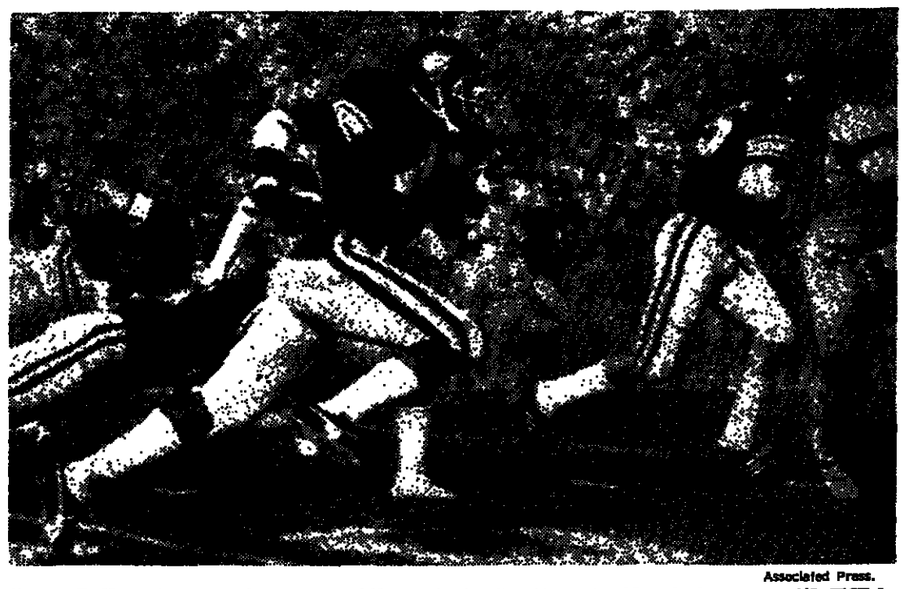
Senior tailback Mike Voight rushed for 261 yards, scored four touchdowns and a two-point conversion with 37 seconds left to give North Carolina a 39-33 victory over Duke and its berth in the Peach Bowl.

SUN BOWL

(Texas A&M vs. Florida)

Texas A&M fullback George Woodard blasted past the 1,000-yard mark with 102 yards rushing and three touchdowns yesterday to give the 12th-ranked Aggies a 59-10 victory over winless TCU and a place in the Sun Bowl on Jan. 2 in El Paso, Texas. Florida quickly accepted to meet Texas A&M after ripping Rice, 50-22.

LIBERTY BOWL



(Alabama vs. UCLA)

UCLA's defeat at the hands of rival USC was soothed by an invitation to the Liberty Bowl, Dec. 20, in Memphis, Tenn., against Alabama, which will be playing in its 18th straight post-season bowl game. The Tide defeated Penn State, 13-6, in last year's Sugar Bowl, ending an eight-year streak in which they lost seven bowl games and tied one.

FIESTA BOWL

(Wyoming vs. Oklahoma)

Wyoming, whipped 41-21 by Air Force yesterday, will have a chance to redeem itself against Oklahoma in the Fiesta Bowl at Tempe, Ariz., on Christmas Day.

Associated Press.

Ricky Bell on his way to gaining 167 yards for Southern California in game with UCLA.

Falcons Surprise Cowboys

ATLANTA, Nov. 21 (UPI).—The Atlanta Falcons, bottled up in their own backyard for three periods, erupted for all of their points in less than five minutes of the final period today to upset the Dallas Cowboys, 17-10.

Trailing 10-0 and without having made any kind of threat up to that point, the Falcons were brought to life when linebacker Dewey McClain intercepted a Roger Staubach pass at the Dallas 19 and returned it to the 6.

The Falcons had to settle for a 21-yard field goal by Nick Mike-Meyer at that point but tied the score the very next time they got the ball by driving 58 yards on two plays, the second a 35-yard touchdown run by Mike Esposito.

An interception by Ray Brown at the Atlanta 45 started the Falcons on their way to their winning touchdown which came on a one-yard sneak by quarterback Scott Hunter with 6:53 left in the contest.

The Cowboys, suffering only their 2d loss in 11 games, had two scoring opportunities in the closing minutes. But the first time the Falcons held for downs at their 29 and the second time linebacker Tommy Nobis made Atlanta's third interception of the period at the Falcon 10.

The Cowboys, 12-point favorites, dominated play throughout the first three periods. But their only score of the first half came on a 16-yard run by Scott Laidlaw with 3:58 left in the first period and their only score of the second half was on a 23-yard field goal by Efren Herrera with 4:05 left in the third period.

The Falcons never got closer than the Dallas 48-yard line during those first three periods and, that time, midway through the second period, the Cowboys intercepted a Hunter pass to stop that lone sortie into Cowboy territory.

Raiders 26, Eagles 7

At Philadelphia, Mark Van Eeghen and Clarence Davis each scored a touchdown and led a bruising Oakland rushing attack that gave the Raiders a 26-7 victory over the Eagles and their fifth straight AFC Western Division title.

Van Eeghen gained 133 yards in 21 carries and scored on a one-yard touchdown in the first quarter that put Oakland ahead for good. Davis added 73 yards in 13 carries and an 8-yard touchdown run in the fourth quarter.

The Raiders, who moved the ball at will in the first half but only had a 12-7 lead to show for it at intermission, pulled away in the third quarter when quarterback Ken Stabler hit Fred Biletnikoff on a 16-yard scoring pass.

The Raiders also scored on Errol Mann's 32-yard field goal and registered a safety when Eagle punter Spike Jones fell on his own blocked punt as Oakland posted its 10th victory against 1 loss.

Patriots 38, Jets 24

At New York, Prentice McCray returned interceptions 63 and 55 yards for touchdowns and Steve Grogan added three scoring passes to lead New England to a 38-24 victory over the Jets and insure the Patriots of their first winning season in 10 years.

McCray picked off a Joe Namath pass and returned it 63 yards in the second period and later stepped in front of another Namath pass in the third quarter, going 55 yards to boost New England's lead to 28-17. Rookie Mike Haynes picked off three passes as the Patriots intercepted a club record seven passes—five against Namath and two more against Richard Todd—en route to their 8th victory in 11 games.

Grogan threw a 15-yard TD pass to Andy Johnson and a 14-yarder to Daryle Stingley in the first period to rally the Pats from a 10-0 deficit to the victory that pulled them to within half a game of first-place Baltimore in the AFC East. Grogan then added a five-yard scoring pass in the fourth quarter to Pete Brock, a center playing tight end.

Steelers 32, Oilers 16

At Pittsburgh, Reggie Harrison, subbing for the injured Franco Harris, rushed for 44 yards and two touchdowns and Roy Gerela kicked three field goals to lead Pittsburgh to a 32-16 victory over AFC Central Division rival Houston for the Steelers' sixth straight victory

Rocky Bleier also scored a Pittsburgh touchdown on a 10-yard run and the Steeler defense provided a safety when Loren Toews blocked a Skip Butler punt and the ball rolled out of the end zone.

The bullish Harrison, who went in when Harris suffered a slightly sprained ankle midway through the second period, scored both his touchdowns on one-yard bursts.

Gerela's field goals were from 37, 35 and 18 yards. He added extra points and his 12-point performance made him the NFL's 16th all-time leading scorer with 743 career points, ahead of Tommy Davis's 738.

Chargers 34, Bills 13

At Orchard Park, N.Y., Dan Fouts threw first-half touchdown passes of 13 and 5 yards to wide receiver Charlie Joiner to spark San Diego to a 34-13 victory over Buffalo in a loosely played game.

The game was almost a comedy of errors as each team intercepted three passes, a bad snap from center gave Buffalo its only touchdown and fans chanted for a new quarterback. The Chargers are now 5-6, while the Bills fell to 2-9.

The Chargers took a quick 7-0 lead when Don Woods ran 13 yards up the middle at 1:39 of the first quarter, climaxing a four-play drive that was highlighted by Fouts's completions of 29 and 26 yards to Pat Curran and Joiner, respectively.

Buffalo closed it to 7-3 on a 29-yard field goal by George Jakovenko at 7:29 of the first quarter, but on the ensuing San Diego drive, Fouts drove the Chargers from their own 28 before hitting Joiner for the five-yard scoring pass at 11:59 to put San Diego in front, 14-3.

Early in the second quarter, Mike Fuller returned a Buffalo punt 43 yards to the Bills' 44 and two plays later Fouts hit Joiner for the 13-yard TD pass to put San Diego in front, 21-3.

Browns 24, Buccaneers 7

At Tampa, Fla., Brian Sipe hit Paul Warfield with a 15-yard touchdown pass in the third period and Joe Jones recovered a fumble for a fourth period score in leading Cleveland to a 24-7 victory over winless Tampa Bay, keeping alive the Browns' hope for a wild-card playoff berth.

Sipe's toss over the middle found Warfield at the two and he went in untouched with 6:34 to go in the third period to break a 7-7 tie.

Jones put the game out of reach on the second play of the final period when he hit Tampa quarterback Steve Spurrier at the two, forcing a fumble which he recovered in the end zone.

Lions 14, Bears 10

At Pontiac, Mich., Greg Landry threw touchdown passes to Larry Walton and Ray Jarvis in the final 2:18 of the first half and Detroit's defense made it stand up to give the Lions a 14-10 victory over Chicago.

The loss ruined what faint playoff hopes the Bears had and gave them the same 5-6 record as the Lions, who still hope to finish second in the NFC Central Division for the eighth straight season.

Quarterback Bob Avellini, who missed his first eight passes of the second half, tried to mount a last-ditch drive with less than two minutes remaining following an interception by defensive tackle Wally Chambers on the Chicago 31 but a penalty and a deflection in the end zone by defensive back James Hunter saved the victory for Detroit.

Landry, who had a string of four straight theft-free games broken with a pair of interceptions, completed 15 of 25 passes for 187 yards and the two scores. He entered the game as the top passer in pro football.

Trojans Were 'Just Too Strong'

By David Dupree

LOS ANGELES, Nov. 21 (WP).—UCLA coach Terry Donahue had a faraway look in his eyes yesterday as he kept saying, "They're too strong. They're just too strong."

Southern California was, indeed, too strong for the second-ranked Bruins. The Trojans unleashed a semi-healthy Ricky Bell, cool quarterback Vince Evans and a big, fast and mean defense to score a convincing 24-14 victory.

That gave the third-ranked Trojans the Pacific-8 championship and a trip to the Rose Bowl to face Michigan, the Big Ten champion.

Southern Cal will be going to Pasadena for the 8th time in 11 years, while UCLA settled for the Dec. 20 Liberty Bowl against Alabama.

On offense, the bigger Trojans wore down the Bruins. On defense, they threw a few new alignments at UCLA.

"We wore them down," USC coach John Robinson said. "We ran the ball at them and wore them down. We kept the ball away from them and dominated the second half, and that was the key to the game."

The Trojans unspectacularly but steadily powered their way to a 24-0 lead and then, as Bell said, "gave UCLA two touchdowns" in the final four minutes.

Carried 36 Times

Bell had been slowed by a sprained ankle for more than a month and had not rushed for more than 100 yards since gaining 347 against Washington State Oct. 9, but he carried 36 times today for 167 yards and a touchdown.

Evans, who completed 7 of 13 passes for 79 yards and ran for a 16-yard score himself on a quarterback draw, "was absolutely brilliant," his coach said.

The only score of the first half was provided by the Southern California defense when safety Dennis Thurman picked off a Theotis Brown fumble in the air and raced 47 yards for a touchdown.

Thurman scored in a similar fashion against UCLA two years ago.

As Brown went through the line, he was hit from the side and the ball squirted loose.

"It came right at me like someone was throwing a spiral to me," Thurman said. Thurman was off and running before anybody realized what had happened.

The 90,519 at Memorial Coliseum girded themselves for a big second half, since UCLA has been a second-half team all season. Going into today's game, the Bruins had outscored their opponents, 209-40, in the final two quarters. The tables were turned yesterday.

TD by Bell

The Trojans padded their lead to 10-0 on a 42-yard field goal by Glen Walker in the third period. They made it 17-0 just 13 seconds into the final quarter on a 62-yard, eight-play drive with Bell scoring from the one after a pass-interference penalty against the Bruins.

Southern California boosted its lead to 24-0 on its next possession after Rod Martin intercepted a Jeff Dankworth pass and returned it 17 yards to the UCLA 35.

Five plays and a holding penalty later, Evans burst up the middle on a quarterback draw, veered to his right and cut left on a 35-yard touchdown run that started the Trojans sniffing those roses.

The Trojans gave the Bruins nothing. In fact, UCLA didn't even get a first down in the second half until the final six minutes of the fourth period.

UCLA finally scored on a nine-yard run by Brown with 3:59 left. Dankworth passed to Rick Walker for the two-point conversion.

LSU 17, Tulane 7

At Baton Rouge, reserve running back Charles Alexander scored on runs of 11 and 3 yards to lead a fumbling, penalty-plagued Louisiana State to a 17-7 victory over traditional rival Tulane.

Stanford 27, California 24

At Berkeley, defensive end Duncan McColl recovered a fumble at California's two-yard line, setting up Ron Inge's touchdown run, which came with 1:31 remaining, and Stanford edged the Bears, 27-24.

Kansas 41, Missouri 14

At Columbia, Mo., sophomore quarterback Mark Vincendese threw for a touchdown and ran for another as the Kansas Jayhawks broke loose for 24 points in the second quarter to shock 19th-ranked Missouri, 41-14.

The victory was Kansas' fifth in six games in the oldest football rivalry west of the Mississippi and virtually eliminated Missouri's postseason bowl chances.

Baylor 20, Texas 10

At Waco, Texas, quarterback Mark Jackson scored a touchdown and passed for another and the Baylor defense strangled once-proud Texas as the Bears claimed a 20-10 Southwest Conference victory.

The victory gave Baylor a 6-2-1 season record and a 3-2-1 conference mark. Texas fell to 4-4-1 overall and 3-3 in SWC play.

Wolverines Dominate Buckeyes

By Neil Amdur

COLUMBUS, Ohio, Nov. 21 (NYT).—The frustration finally ended for Michigan yesterday. Five years after their last triumph over the Buckeyes sent them to the Rose Bowl, the once-beaten Wolverines again qualified for the New Year's day game with a second-half scoring surge that silenced Ohio State, 22-0.

It was the first shutout against a Woody Hayes-coached Buckeye team in 123 games, dating back to another Michigan victory, 10-0, in 1964.

Michigan's dominance, after a dull, tedious and scoreless first half, was the result of a strategic adjustment. Instead of trying to ram the ball down the Buckeyes' throat, as they did unsuccessfully in the opening two quarters, the Wolverines utilized the option offense that had won 9 of 10 previous games and produced college football's most prolific ground attack.

With Rick Leach, the sophomore quarterback, keeping the ball, pitching it back to Rob Lytle, or handing off inside to Russell Davis, Michigan rushed for 259 yards in the second half, including third-quarter scoring drives of 80 and 52 yards that consumed 11 minutes, 6 seconds of the period.

Michigan attempted no passes in either of the two drives. But the threat of the option kept the Buckeye defense from aggressively penetrating the line of scrimmage and allowed the Wolverines greater flexibility, particularly for their outside game.

A 20-yard scramble by the 6-foot, 1-inch-tall Leach on third and three at the Buckeye 47, after he appeared to miss a handoff, sustained the first 11-play drive. A reverse to Jim Smith, a wingback, caught Ohio State flatfooted on second and 12 at the Buckeye 25, and resulted in a 16-yard gain during the second scoring march.

Davis scored the first two touchdowns on three-yard runs. Lytle, the game's leading rusher with 167 yards in 29 carries, ran three yards for the clincher with 8:13 left after Jerry Zuver intercepted a James Pacenta pass and returned it 11 yards to the Ohio State 15.

The defeat left Ohio State with an 8-2-1 regular-season record.

Ohio State's only scoring threat, late in the second quarter at the Michigan 10, ended with a pass that should not have been thrown. Pacenta, under pressure all afternoon, threw into a crowd and Jim Pickens, a Michigan defensive back, made a leaping interception in the end zone.

Limited to 173 Yards

In the second half, Michigan, its offensive line firing out quickly on the synthetic playing turf, ran 43 plays to 22 for Ohio State. The Buckeyes, who have scorned the pass in the past, were limited to 173 total yards, only 63 in the last two quarters.

When Ohio State had to pass, trailing 15-0, the Buckeyes could not execute. Or Michigan's line, led by two aggressive tackles, Greg Morton and John Hennessy, hurried Pacenta into misfiring.

"Michigan will get my vote as the No 1 team in the country," said Buckeye coach Woody Hayes.

Michigan lost a perfect season by bowing to Ohio State in 1972, then lost the Rose Bowl bid despite tying the Buckeyes in 1973, a decision that still rankles coach Bo Schembechler. Ohio State won the last two years, but by close scores.

Hayes, in a rare admission, blamed himself for the interception that cost the Buckeyes at least a potential three points in the first half.

Bold Forbes Is Bought As Stud for $4 Million

SAN JUAN, Puerto Rico, Nov. 21 (AP).—Bold Forbes, winner of the Kentucky Derby and Belmont Stakes, has been syndicated for $4 million by a group headed by Aaron Jones.

Esteban Rodriguez-Tizol, a retired banker, said yesterday that the agreement had been signed that the 3-year-old stallion has been delivered to his new owners. Bold Forbes was retired on Nov. 4 and was sent to Kentucky, where he will stand at stud.

Free Agents Garland, Bando Sign

From Wire Dispatches

NEW YORK, Nov. 21.—Two more of baseball's free agents, pitcher Wayne Garland and third baseman Sal Bando, signed contracts yesterday. Garland joined the Cleveland Indians and Bando the Milwaukee Brewers.

Garland, 26, who was 20-7 and had a 2.67 earned-run average with the Baltimore Orioles last season following a 2-5 performance in 1975, was the Indians' first-round pick in the re-entry draft of free agents.

His acquisition gives the Indians one of the more formidable pitching staffs in the American League. Cleveland obtained Al Fitzmorris, a 15-game winner with Kansas City last season, in a trade with the Toronto Blue Jays, who had claimed him in the expansion draft.

Garland joins Dennis Eckersley, Jim Bibby, Pat Dobson and promising youngster Rick Waits on the Indians' mound staff. Eckersley, Bibby and Dobson won 42 games last season.

"Garland is one of the finest pitchers in baseball," said Phil Seghi, general manager of the Indians. "I think we now have shown baseball, and in particular our fans in Cleveland, that we are dedicated to bringing up a championship team."

Highest-Paid Player

Terms of Garland's contract were not disclosed, but Seghi was reported to have offered the hurler a multiyear pact worth $1.2 million, a figure that would make him the Indians' highest-paid player.

"I made $23,000 with Baltimore last season," Garland said at a press conference in Providence, R.I. "Now I've stepped into a different category. It will be a big change for my family."

In Milwaukee, it was announced that the Brewers had signed Bando, the 32-year-old Oakland third baseman, to a multiyear agreement. Terms were not disclosed.

Bando anchored the A's infield for all of his nine years in the majors, serving as team captain while Oakland won five American League West Division titles and the 1972, '73 and '74 World Series.

"We are extremely happy to have a player of Sal's ability with our organization," Brewers President Bud Selig said. "But more important, we are elated to have a man with Sal's leadership and winning attitude on our ball club."

.255 Career Average

Bando, the Brewers' No. 1 pick, is a four-time American League All-Star. He hit .240 last season with 27 home runs and 84 RBI. His career average is .255.

Garland became the seventh of 10 free agents represented by agent Jerry Kapstein to sign with a club. Left-handed pitcher Don Gullett was the sixth, agreeing Thursday to a six-year contract with the New York Yankees.

He followed outfielders Joe Rudi and Don Baylor, both of whom went to the California Angels; infielders Dave Cash, who signed with Montreal, and Bert Campaneris, who signed with Texas, and catcher Gene Tenance, who reached agreement with the San Diego Padres.

Still available from Kapstein's list are infielder Bobby Grich and pitchers Rollie Fingers and Doyle Alexander.

Yankees Are Said to Seek Jackson

By Murray Chass

NEW YORK, Nov. 21 (NYT).—The New York Yankees, allowed to sign one more free agent under baseball's new rules, have cooled on Bobby Grich and are aiming aggressively at Reggie Jackson, it was learned yesterday.

A source close to the free-agent scene said that the Yankees apparently had backed off in their quest for Grich because they weren't convinced they should pay close to $2 million to find out if he could make the switch back from second base to shortstop.

Grich, the source said, very likely will sign with the California Angels for perhaps $1.75 million.

The Yankees, meanwhile, have turned to the 30-year-old Jackson as a player who could add a significant long-ball touch to their lineup and a personality to the team that would attract a significant number of additional fans to Yankee Stadium.

To get the outspoken, slugging outfielder, the Yankees apparently will have to outbid the Montreal Expos and the Philadelphia Phillies. Jackson, who is said to have eliminated West Coast teams from contention, will come to New York early this week to meet with Yankee officials.

George Steinbrenner and Gabe Paul, the Yankees' free-agent negotiators, both were out of the city and could not be reached. However, the source said that Steinbrenner has favored signing Jackson from the time the Yankees drafted negotiation rights to him and has slowly brought Paul around to his way of thinking.

Paul, the president who is responsible for the baseball operations, had wanted to sign Grich to give the Yankees a strong short-stop.

After the Yankees signed Don Gullett last Thursday, Paul and Steinbrenner returned to Providence, R.I., to resume negotiations with Jerry Kapstein, the agent, for Grich's services. However, they left Providence without the former Baltimore Oriole, and Steinbrenner apparently decided he did not want to pay that kind of money for what would amount to an experiment.

No Guarantee

Grich, who will be 28 in January, played second base for the Orioles the last five seasons and there was no guarantee he could capably return to shortstop, where he played in the minor leagues.

Grich, a .262 career hitter, is considered one of the finest second baseman in baseball, but the Yankees are set at second with 22-year-old Willie Randolph, who is expected to have no problems following recent knee surgery.

Jackson, who would give the Yankees a long-throwing arm for their weak-throwing outfield, has averaged 31 home runs in his nine years in the majors. This last season, he hit 27 homers and drove in 91 runs even though he missed the early weeks of the season after refusing to report when Oakland tried him to Baltimore.

Brawling, Injuries, Arrests Mark Worst English Soccer Weekend

LONDON, Nov. 21 (UPI).—Nine spectators were stabbed, arrested and 9 players were sent off yesterday in separate incidents which gave England its blackest soccer weekend on record, on and off the field.

Police said that nine persons were treated for stab wounds after fighting broke out between rival fans in Nottingham Forest's match against Chelsea. Twenty-six persons were arrested as the brawling spilled onto the field and the referee had to stop the match for five minutes to allow mounted police to restore order.

Nineteen were arrested in incidents across the country—one of them for attacking the referee at Reading.

Behavior by players was the worst on record for a single day. The most notable name to be shown the red card was England forward Stan Bowles, who was sent off for a foul tackle in injury time as his team, Queens Park Rangers, downed Middlesborough, 3-0.

At Reading, referee Eric Read, having weathered the fans' attack, sent off two Wealdstone players in the first round of the FA Cup. Reading won, 1-0.

The other players sent off were Mike Pejic of Stoke and John Beck of Coventry in the first division, Jimmy Hinch of second division York and three other cup players.

Observer

At the Opera Bouffe

By Russell Baker

NEW YORK.—The whole family went to see the current revival of "The Transition," the show that propelled John Kennedy to stardom in 1960. As soon as the curtain went up, the hero walked on and desegregated a church.

"That's not the way it starts," said grandmother. "The first thing the hero is supposed to do is reappoint J. Edgar Hoover director of the FBI."

Baker

"This is not the Kennedy production," whispered young Edgar. "And besides, J. Edgar Hoover is dead."

"Well, they could have come up with something else just as macabre," groused grandmother. She is a traditionalist, and "The Transition" is one of her favorite plays. She first saw it in 1952 starring Gen. Eisenhower. That version was set in the Commodore Hotel, and all the performers wore bomburgs.

When she went to see the Kennedy version, she hated it for the first two weeks because Kennedy wasn't bald and didn't wear a homburg. When they lowered the set temperature to freezing, however, and Kennedy refused to put on an overcoat, she fell in love with the show and said Eisenhower had misinterpreted the role from the beginning.

She had been looking forward to the scenes in which the hero walks around in the blizzard in just his spring suit and necktie to show his "vigor," and naturally she was let down when the opening scenes showed him basking in the warmth of the magnolia belt.

Aunt Hermione, who understands theater, pointed out that the message of the present "Transition" was different, having been adapted for modern audiences. "Today's audience, mother," she explained, "is no longer moved by the idea of getting this country moving again, so they have altered the message to convey a plea for all Americans to love and respect each other again."

"The last time I saw 'The Transition,'" it starred that fellow Nixon, and the message was that he was going to bring us together again," said grandmother. She started to say something about the absurdity of expecting people to love and respect each other again if they couldn't even be brought together by President Nixon, but grandfather took her out for a beer.

We all had a few moments of quiet in which to savor the familiar but still moving crowd scene in which a cast of thousands of reporters, camera operators, editors, sound technicians and network biggies discover that the hero and his entire family, but especially his extraordinary wife, are incredibly capable, fascinating and humble people but, for all that, just like you and me deep down.

"Thank goodness some scenes never change," said Uncle Charlie, dropping off to sleep.

Mother wanted to wake him for the dramatic number in which the CIA director flies in from Washington for the momentous first briefing on the top-secret state of the world, but Aunt Hermione stopped her. "Uncle Charlie knows the scene by heart," she explained. "He wants to rest up for the big production number in which the hero introduces the most astounding collection of brains and talent ever assembled in one administration."

This referred to the scene in which the hero introduces his new Cabinet and White House staff. It is one of my own favorites in "The Transition," although not so stirring, I think, as the scene immediately following in which the newspaper, magazine and television characters all combine in the great choral number delineating the charm, wit, brilliance, tirelessness, youth and imagination of the hero's appointees.

Grandmother got back from the bar just in time to see one of her favorite scenes. "There they are, the young dears!" She beamed as they flooded onto the set. "They haven't changed a bit." She was talking about the brilliant, hard-working young amateurs whose dynamism and devotion to the hero's victory would soon infuse government with new energy and idealism as they went about the good work of uprooting the unbrilliant, soft-working, old professionals whose fatigue and cynicism had brought the nation to such evil days during the previous administration.

And indeed, they hadn't changed a bit, except that where they used to speak in Boston accents, then in southern California accents then in Midwestern accents, they now spoke in the drawl of Dixie. Many of them had still not quite mastered it.

We had to leave immediately afterwards. Mother did not want to expose young Edgar to the scene in which two of the hero's closest friends attack each other with razors in a fight for possession of the office next to the hero's while singing the famous duet proclaiming that White House power struggles are now a thing of the past.

Grandmother couldn't be budged, however. It is her favorite scene of all. After she sees it repeated, she is ready to start laughing again for another four years.

It is possible in southern California to barter for a funeral service or to swap your labors as a barber or anesthesiologist for a fresh salmon.

The Barter System Makes a Comeback

By Robert Lindsey

LOS ANGELES (NYT).—When the wife of Jim Nelson, a 39-year-old electrical contractor, decided recently that she wanted new draperies for their home here, the family got the draperies without spending a cent.

Mr. Nelson merely did some electrical work for a family that was a fellow member of an organization called Mutual Credit Buying System Inc.; then he went to a third member of the cooperative, a drapery store, and with the organization acting as middle man in the transaction, traded credit for doing the wiring for the new draperies.

"I finished my whole house this way; I've bought two cars and a motorcycle and had about $1,000 worth of dental work done by trading with other people," he said.

This helps to demonstrate why southern California has become the center of a growing—and for some people a disappointing and controversial—industry: organized bartering.

Clearinghouses

At least six organizations such as Mutual Credit Buying System have been established here to serve, for a fee, as clearinghouses between professional people and small businessmen who want to trade services and products. They operate much like banks; but instead of depositing money, the members bank their labors, products and services and then withdraw credits when they want to buy something.

The idea is spreading. Several of the trading clubs here are setting up branches in other states, and at least one is attempting to sell franchises. But the experience here also indicates that some people who get involved in these cooperatives may wish that they hadn't.

It is possible in southern California to barter for a funeral service or to swap your labors as a barber or anesthesiologist for a fresh salmon.

At least, normally, you can barter to have your house painted or fumigated, your car fixed or your appendix removed.

Even some massage parlors say that they will exchange the services they offer for the services others offer. There is a professional horse trader who says, yes, she will trade horses for services offered by the other members.

The largest of the trade clubs, Business Exchange, which says it has a membership of more than 4,700, and Mutual Credit Buying System, which says it has more than 3,500 members, use computers to keep records of how many dollars worth of work each member has done for other members and how many of the dollar credits they have spent.

Membership Fee

For handling the transactions, the companies charge a fee—generally 7 to 9 per cent of the value of the item traded. There is often also a membership fee—$49.50 in the case of Mutual Credit Buying, for example.

"There's really nothing new about it; bartering is the oldest form of doing business," said Thomas Skala, the chairman of Mutual Credit Buying, whose members, he added, are now doing about $12 million worth of transactions monthly. Some advertising agencies, he said, have long traded their services for products; some newspapers have traded advertising for free hotel rooms.

"But in the past, you've had direct trading—a clothing maker might have traded three shirts to the farmer for a bushel of corn. What we are doing is indirect trading.

"'A' doesn't have to trade with 'B,' he can trade with 'C' and save up his credits for a trade—we call the credits 'futures'—and when he wants to get something, he just uses the 'futures' he has saved up."

Members of occupations whose "products" consist predominantly of their own labors—physicians, dentists, accountants and lawyers, for example—may obtain others' services on a 100-per-cent exchange basis—without any cash changing hands. But, in exchanges involving raw materials or merchandise — carpentry, plumbing, a restaurant meal or an appliance—the rules of the organizations generally require that a portion of the transaction be handled in cash—as much as 75-per-cent cash for some commodities such as groceries or new cars.

Dodging Taxes

According to federal tax laws, people who perform a service and get paid for it in trade-club credits or swap something for the service must pay taxes as if normal income was involved. However, interviews with a number of people who belong to such clubs here indicate that many do not pay taxes on their trades.

Some people like the concept. Mr. Nelson, the electrical contractor, for example, said: "It's really helped me: I get business from people who never heard of me before because they checked the MCB directory; there are some bad apples in it, but if you're real careful, you can do real good."

Some of the other people who were interviewed also supported the concept. But, of 16 people who were contacted from the Mutual Credit Buying System membership directory, 11 emphasized they were unhappy with their experiences; usually because they said they had provided services to someone and then found they could not spend their "futures" because of a variety of reasons.

Several complained that they had accrued large credits and that the only way they could spend them was on dubious real estate properties pushed by the organization.

"It was useless for me," said Steven Peterman, who runs a repair shop for foreign cars. "The salesman gave me a real line and got me to join; then some guy got $500 worth of work out of me and when I tried to use the 'futures' everybody I called said they weren't members anymore."

Business Boost

Dr. Brya Garretson, an optometrist, said that after he joined, "It was a tremendous jolt. I did $14,000 worth of business in three months; I could have done $100,000 within a year's time. The trouble is that you have trouble spending the 'futures.'"

When his balance of "futures" began growing, he said, "I was offered all kinds of real estate deals that didn't smell right. He has stopped exchanging service on a 100-per-cent basis but will still provide glasses to members who pay 75 per cent cash.

Another member, a woman who did not want her name published because she feared criticism would cause her to lose $500 in credits accrued by her husband, a carpenter, said:

"We've just had a terrible time. When you call people in their directory, they won't have anything to do with you; or when they do, they treat you as if you were not a regular customer; they raise the price far over what you would normally pay, or they put you off."

Asked about complaints from members, Mr. Skala said: "This is very complex procedure, we know it; it's difficult to get people to understand how it works; 95 per cent of our problems are with people who don't understand it; it's a problem of education."

PEOPLE: *Television Stalls Gala By French Stars in L.A.*

The highlight of France's contribution to the U.S. Bicentennial celebration turned a hit sour Saturday night when the show went on . . . and on . . . and on. The audience dwindled from 1,000 to about 150; France's culture minister, **Françoise Giroud**, left pleading an early Sunday appointment; some actresses were reported in tears; **Liza Minnelli's** dress belt burst as she approached **Charles Aznavour** during an act (but that was quickly repaired).

The French had moved an event known as the Variety Gala, in which film stars do circus acts, to a Los Angeles theater to mark the Bicentennial. Hundreds of officials and artists flew in to see the show, the first time it had been produced outside France. The unrest arose when the company sponsoring filming for U.S. television took control. The gala was strung out for six hours, with long gaps as cameras were se up and angles checked.

"The trouble was the audience was not told it was going to be done like a television show," said Miss Minnelli. "They had no idea they were going to be sitting there so long."

U.S. Ambassador to France **Kenneth Rush**, who had flown in specially from Paris, said the audience had expected to see a regular circus performance without interruption.

* * *

Dorothy Schiff, editor in chief and publisher of the New York Post, announced Friday that she had agreed to sell the afternoon daily to **Rupert Murdoch**, the Australian publisher whose empire includes newspapers in his own country, the United States and England.

Mrs. Schiff said that her decision to sell was mainly prompted by recent changes in the federal tax laws that would have cost her heirs "prohibitive" sums in inheritance taxes if she had passed the paper on to them as she had hoped to do.

* * *

Entertainer **Dean Martin**, 59, has obtained an uncontested divorce in Los Angeles from his third wife, **Catherine**, 28. The pair were married in August, 1973, and Martin last year adopted his wife's daughter by a previous marriage, Sasha, 10.

* * *

Don Sydall of Gravesend, England, had a nagging backache, so his doctor took an X-ray. It showed a bullet in the back which Sydall, 58, had been carrying around for 36 years without knowing it. Doctors decided against operating to remove the old round, probably fired into Sydall during wartime fighting near Dunkirk, in 1940. His backache, the doctor said, "is just plain sciatica."

* * *

He was just doing his job when he started chatting up the woman he took to be a prostitute. She was a police decoy. San Francisco radio-TV personality **Willard Wattenburg**, 40, says that he never

Actress Valerie Perrine . . . elephant during French . . . riety Gala circus ac

intended to have sex with . . . **Galbreath**, 22. Testifying . . . Marysville, Calif., court, he . . . that the only way he cou . . . a prostitute alone for an inte . . . was by propositioning her. . . . the author of "How to Fin . . . Fascinate a Mistress".

CLASSIFIED ADVERTISEMENTS

TENDER NOTICE

Republic of the Philippines
Metropolitan Waterworks and Sewerage System
Manila Water Supply Project
Contract No. DM-1

INVITATION FOR PREQUALIFICATION TO BID

The Metropolitan Waterworks and Sewerage System, hereinafter called MWSS, expects to invite bids about [illegible] 1977 [illegible] ed contractors for the construction of New Ipo Dam, located on the Angat River near its confluence with the Ipo River, approximately seven (7) kilometres downstream from the Angat Hydroelectric Project at Ipo, Norzagaray, Bulacan, Philippines.

The work includes but is not limited to the following items:
1. Construct a concrete dam and tunnel intake structure (approximately 75,000 cubic metres of concrete) and connect the intake structure to existing tunnels by constructing a new tunnel approximately 120 m long and 5 m to 2.5 m in diameter.
2. Construct new access roads.
3. Modify an existing concrete aqueduct interconnection structure, and complete the concrete crown lining of approximately 6,000 m of an existing 2.2 m diameter tunnel.
4. Supply and install seven (7) spillway radial gates approximately 14 m wide X 12 m high, intake structure gates with manual operators, stoplogs for spillway, and intake structure trashracks and traveling screens.
5. Construct a 2.5 km, 34.5 kv transmission line. Supply and install related transformers and switchgear and a standby diesel generator.

The work will form part of a major program designated as the Manila Water Supply Project, currently being undertaken by MWSS, and funded in part by a loan from the Asian Development Bank. It is intended that a portion of the proceeds of this loan will be applied to payments of foreign currency costs under the Project. Prequalification is limited to bonafide Contractors of member countries of the Asian Development Bank and Luxembourg.

The engineer's preliminary total estimated cost for the work is approximately 150,000,000 pesos.

Prospective bidders must have extensive experience in the work involved.

Foreign Contractors, if they so wish, may form a joint venture with Philippine Contractors for the purpose of executing the work, and although not mandatory this is encouraged.

Prequalification questionnaires may be obtained from:
Project Management Office
Manila Water Supply Project
Metropolitan Waterworks and Sewerage System
Room 203, ITC Building
337 Buendia Avenue Extension
Makati, Metro Manila, Philippines.

Questionnaires must be completed in the English language and received by the project management office at the above address. Deadline for submittal of prequalification documents is 5:00 p.m., Manila time, 29 December, 1976. However, prospective bidders are enjoined to submit the prequalification statements earlier to facilitate their prequalification.

By 31 January, 1977, prequalified bidders will be selected and notified. On or after 31 January, 1977, contract documents will be made available to prequalified bidders on payment of the required fee.

Address all communications to "The General Manager, Metropolitan Waterworks and Sewerage System, Attention: Project Manager, at the above address or at P.O. Box 1,251, MCC Makati, Metro Manila, Philippines."

Telephone: 85-48-85 or 85-47-05.
Telex: 2,566 CDM PH.

Oscar I. Ilustre,
Acting General Manager.

No. 29,190 — PARIS, WEDNESDAY, DECEMBER 8, 1976 — Established 1887

To Our Readers

This abbreviated edition of the International Herald Tribune appears after two days of strikes. Since the strike was not suspended until late last night, it was not possible to publish the full edition.

Since the Herald Tribune is not involved in the local issues disputed in the strike, it had asked to continue publishing for distribution outside of France, but this was refused.

We deeply regret the inconvenience to our readers.

Shuts Papers 2 Days

Paris Printers' Strike Caps 20-Month Conflict

By James Goldsborough

PARIS, Dec. 7 (IHT).—A sudden walkout by the principal French ...nting union Sunday halted publication for two days of all news... ...pers printed in Paris—including the International Herald Tribune—... many more printed in the French provinces. It also delayed ...blication of today's newspapers, and forced the IHT to reduce the size of this edition. The strike was called by the Syndicat du Livre to protest the government's use of police Sunday morning to evict union members from the offices of Le Parisien Libéré, a Paris daily that has been involved in a conflict with the union for almost 20 months.

The government acted following a decision by the court of appeals last week confirming a court decision last year ordering evacuation of the newspaper. But the police action set off the crisis that has been simmering here since April of last year without any effort made to solve it.

Responding to the police action, the Communist-led General Workers' Confederation (CGT), parent organization of the Syndicat du Livre, called nationwide walkouts yesterday. Demonstrations were held throughout France, accompanied by electricity and gas cuts.

Prime Minister Raymond Barre appeared on television last night to declare that in forcing out the printers, the government was implementing a court order and that he intended to enforce the laws of the republic. He announced that a mediation effort between the union and the newspaper had begun.

Political Tones

The affair took on immediate political tones. The union charged the government with a pre-electoral provocation. The Gaullist party expressed its own displeasure and several suggestions were made that the government action was timed to coincide with the Gaullist rally taking place Sunday.

All newspapers printed in Paris were affected, even though some have been critical of Le Parisien Libéré and its owner, Emilien Amaury, during the protracted conflict. Jacques Sauvageot, publisher of Le Monde, publicly condemned Mr. Amaury's position in refusing to negotiate during much of the strike.

The conflict between the right-ist, mass-circulation newspaper and the Communist union is one of the most bitter in French newspaper history. Since it began, a man has been killed in a bombing attack, there have been various other bombings and violence, numerous demonstrations and six 24-hour walkouts, silencing most of the press in France.

These walkouts are not popular within the Communist leadership, since plurality of opinion and of political parties will be one of the key issues in the 1978 electoral campaign. But the hostility between the two sides is deep enough that neither has hesitated to go to extremes.

Not an Easy Task

Tonight, the government announced that Jean-François Mottin, a state counselor, had been chosen to mediate the conflict. His first words were that, "it is not an easy task I have been given." Mr. Mottin was named following separate meetings between Christian Beullac, the minister of labor, with Mr. Amaury and leaders of the Syndicat du Livre. Following the meetings, the union suspended

(Continued on Page 2, Col. 1)

...lealey Sees ...ultilateral ...id to Pound

...ONDON, Dec. 7 (Reuters).—...ancellor of the Exchequer De... Healey said today that he ...ped to announce agreement in ...inciple on international backing ...r sterling balances held by for...gners when he presents his ...ish austerity measures next ...pril.

After his statement at a For...gn Press Association luncheon, ...e pound gained more than a ...nt on the foreign-exchange ...arket.

Mr. Healey spoke after attend...g the latest of the meetings at ...hich the Cabinet has been con...dering the extent of the eco...mic sacrifices Britain will have ... make to qualify for the $3.9...illion loan it is seeking from ...e International Monetary Fund.

He refused to give out informa...on on the size of cuts in govern...ent spending or any other mea...res the Cabinet is planning. On that subject he confined ...mself to saying: "I hope the ...asures I shall announce in a ...ek's time will contribute to ...e stability of sterling over a ...ng period."

He then indicated that broader ...ernational support than the ...F credit was on the way—...me kind of "safety net" to ...otect the sterling balances.

Mr. Healey said: "We may be ...le to announce agreement in ...inciple on the sterling balances ...the same time as we announce ...e government's measures and ...reement with the IMF."

The sterling balances held by ...e governments and private resi...nts abroad total about £6 bil...n ($9.96 billion).

...Because many official holders ...sterling are able to sell out ...en they choose, the balances ...ve become a permanent threat ...the pound's stability.

...Mr. Healey recalled today that ...e sterling balances expanded in ...4 when oil-exporting countries ...osited huge amount of money ...London. But he said that they ...d fallen by £900 million in the ...ond quarter of this year.

...New government statistics were ...ed today, showing a further ...5-million decline in official ...ding balances between July ...1 the end of September.

...Mr. Healey ascribed the pound's ...ent sharp falls to comparat...ly higher inflation rates in ...tain, but said other govern...nts and foreign central banks ...eed that the decline was now ...rdone.

...Mr. Healey said Britain's infla...n rate was likely to remain at ...present level, around 14 to 15 ...cent, over the next six months, ...there should be a steady de...e in the last part of next ...r.

...e said that contrary to popu... belief Britain was spending ... of its national wealth on ...al security than the United ...tes, and less than nearly all ...s EEC partners.

PLO Seen As Yielding On Status In Geneva

By Henry Tanner

BEIRUT, Dec. 7 (NYT).—Palestinian leaders are moving toward acceptance of an Egyptian proposal for their inclusion in a single joint Arab delegation to a future Geneva conference on the Middle East, informed Arab diplomats said here today.

Until now the Palestinians have been insisting that the Palestine Liberation Organization take part in the conference as an independent delegation along with Egypt, Syria, Jordan and Israel.

This request has been vetoed by Israel, supported by the United States. The two governments say that the PLO must recognize Israel's right to exist before it can qualify for participation at a peace conference.

At the United Nations yesterday, Israel called for resumption of the Geneva conference without the PLO. But in a statement to correspondents afterward, Chaim Herzog, the Israeli representative, said that the Israeli delegation at Geneva would not check the credentials of the members of the Jordanian, Egyptian and Syrian delegations.

The Palestinian movement has refused to become a member of a Jordanian or a joint Jordanian-Syrian delegation. This refusal is being maintained, according to informed diplomats.

As for Jordan, officials in Amman now take the position that their delegation will discuss only issues that concern Jordan and will not attempt to negotiate for the Palestinians. The Jordanians add that any deal made by a Jordanian delegation would be rejected by the Palestinians and other Arabs regardless of its merit.

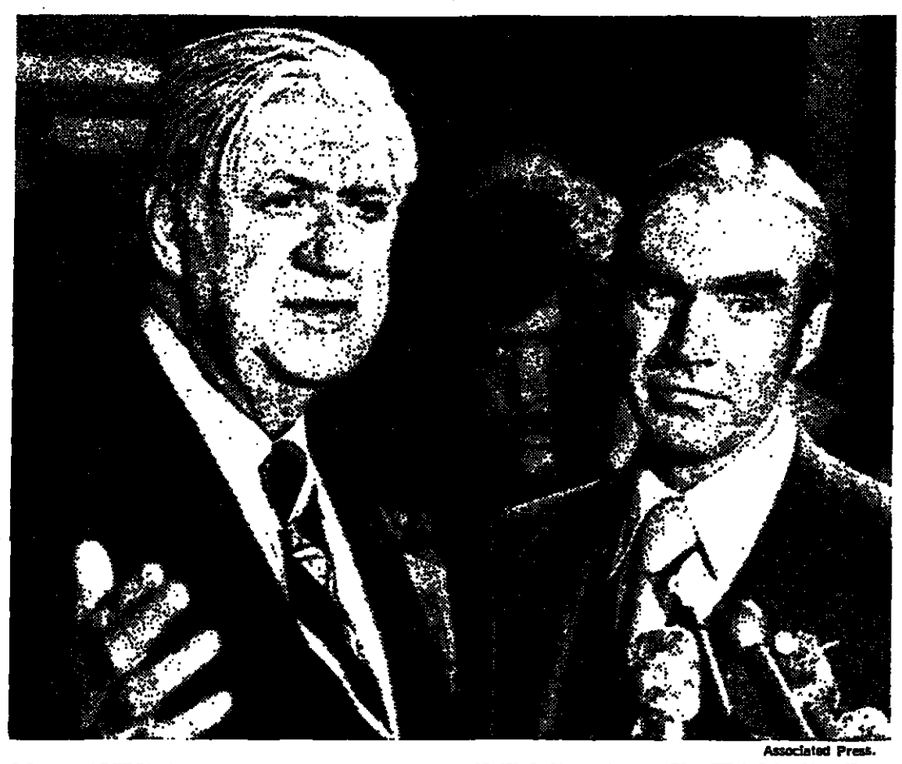
Syria, at the outset, was cool to the Egyptian proposal for a single Arab delegation. Having used their power in Lebanon, the Syrians claimed a leadership role in the Arab world. But in a joint delegation, Egypt is ligely to be the leading member.

President Hafez al-Assad of Syria will go to Cairo at the end of this week for talks with President Anwar Sadat. The two men are under pressure from Saudi Arabia to agree to a joint strategy.

Arab diplomats here today took Mr. Herzog's New York statement as a sign that Israel did not reject the Egyptian proposal for a single Arab delegation with Palestinian participation.

Even if they joined a single delegation, however, Palestinian leaders would still demand that they receive a formal invitation from the United States and the Soviet Union, the co-chairmen of the conference, the Arab diplomats said.

Resolution 242



Both superpowers have been saying that such an invitation would be issued only if the Palestinian leadership accepted Security Council Resolution 242, which gives every state in the Middle East the right to exist in secure borders.

The PLO has rejected this resolution many times, but observers here nevertheless discern a softening of the PLO attitude on this score.

A tough statement of rejection, issued by the PLO executive committee 10 days ago, was made in the absence of Yassir Arafat, the PLO leader, and Nayef Hawatmeh, the head of the Marxist Democratic Front, which is a close ally of el-Fatah.

Both men were described as unhappy with the statement.

Mr. Arafat, who was in Bucharest today, is due in Moscow tomorrow for talks with Soviet officials about the Geneva conference, Resolution 242 and proposals for the establishment of a Palestinian state on the West Bank and in Gaza.

Associated Press.

CONGRESSIONAL LEADERS—Rep. Thomas O'Neill, left, and Rep. Jim Wright after they were elected Speaker of the House and majority leader respectively by the Democrats.

Rep. Wright Is Majority Leader

O'Neill Selected as House Speaker

By David E. Rosenbaum

WASHINGTON, Dec. 7 (NYT).—House Democrats yesterday elected Thomas O'Neill of Massachusetts to be speaker in the next Congress and Jim Wright of Texas to be majority leader.

Rep. O'Neill was elected without opposition, but Rep. Wright won a one-vote upset victory on the third ballot over the presumed favorite, Phillip Burton of California.

Rep. O'Neill and Rep. Wright will take office when the 95th Congress convenes Jan. 4. Rep. O'Neill will have to be elected speaker by the full House, but because the Democrats are in a majority, that vote will be a formality.

Rep. Wright's election as majority leader continues a tradition that one of the two top Democratic leadership positions in the House is filled by a representative from a Southern or border state.

One of the House's most eloquent orators, Rep. Wright campaigned for the leadership post as a man who could be a bridge between liberals and conservatives. He is recognized as a good negotiator and conciliator.

Rep. O'Neill, who will be 64 Thursday, has served in Congress since 1953, representing the same Cambridge district that was

Urges Observer Status After March Elections

Rumsfeld Suggests a NATO Role for Spain

By Michael Getler

BRUSSELS, Dec. 7 (WP).—Outgoing U.S. Defense Secretary Donald Rumsfeld today suggested that the North Atlantic Treaty Organization invite Spanish government officials to sit in as observers at high-level NATO meetings after parliamentary elections are held in Spain.

Mr. Rumsfeld's suggestion at a closed semi-annual meeting of defense ministers from 13 NATO countries reflects increasing U.S. emphasis on bringing post-Franco Spain into the Atlantic alliance, according to U.S. officials.

It is hoped in U.S. circles that the forthcoming elections promised by King Juan Carlos will help convince some European countries, long opposed to the previous Franco dictatorship, that Spain is now moving toward democracy.

Despite the power of the United States within the alliance, the issue of Spanish entry is extremely sensitive because of long and bitter memories in several countries of Franco policies and World War II association with Nazi Germany. Thus the Americans are hoping that it will be the Europeans who will eventually come around and extend the invitation to join.

Although Mr. Rumsfeld's suggestion was made only in passing and was not a topic for discussion, NATO Secretary-General Joseph Luns is said to have voiced support for the suggestion. West German officials also said they would support negotiations on Spanish membership after the March elections.

Land Mass and Coast

Aside from the potential addition of Spain's armed forces to NATO, the interest in Spanish membership among allied strategists has to do with the country's large land mass well behind the front lines of a likely European battlefield and the long Spanish Mediterranean coast.

The United States has quietly been wooing the Spanish with groups of high-ranking Spanish officers getting tours on NATO installations and a recent meeting with the NATO commander, Gen. Alexander Haig. A course on NATO reportedly has also been set up quietly at the Spanish general staff school in Madrid.

The two-day meeting that opened here today will be followed by a meeting of the NATO foreign ministers. It will be the last such meeting addressed by both Mr. Rumsfeld and Secretary of State Henry Kissinger before the new administration takes over.

British Admiral of the Fleet Sir Peter Hill-Norton, chairman of NATO's military committee, also made his farewell address to the ministers today with an assessment of the East-West balance of power that was even more gloomy than normal for NATO.

The British admiral spoke of a "clear pattern of relentless determination" by the Soviet Union and its Warsaw Pact allies to achieve military superiority over the West.

Suarez Said to Bar Admitting Communists Before 1977 Vote

MADRID, Dec. 7 (Reuters).—Premier Adolfo Suarez is not prepared to recognize the Communist party before Spain's parliamentary elections next year, informed sources said today.

They said that Mr. Suarez made his position known to former West German Chancellor Willy Brandt, who conferred with him yesterday.

Mr. Brandt, president of the Socialist International, returned to Germany today after attending the Spanish Socialist party congress, the first in 44 years.

At the congress, Mr. Brandt said that there could be no lasting peace in Spain without a strong Socialist party. He called the meeting the start of the process of turning Spain into a democracy.

"We have much hope and expectation before the grave, historic responsibility of taking part without traumas in the building of a democratic Spain that will be an integral and irreversible part of Europe," he said. "Europe awaits you."

The sources said that Mr. Suarez also refused to accommodate rightist parties which want the elections to be held as early as next March to give them an advantage over leftist groups, which still have to organize.

Mr. Suarez was said to be thinking of holding the elections in May.

The Premier's refusal to recognize the Communist party before the elections presented a major obstacle for talks with leftist opposition parties, which have threatened to boycott next week's referendum on constitutional reforms.

News Analysis

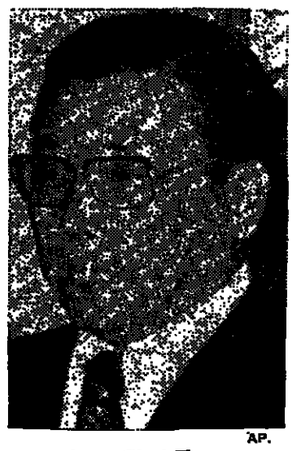
Removal of KCIA Director Seen Result of U.S. Scandal

By Don Oberdorfer

WASHINGTON, Dec. 7 (WP).—The surprise removal of South Korea's intelligence chief is the most dramatic evidence to date that President Park Chung Hee is feeling the impact of the U.S. bribery scandal.

As is customary in Mr. Park's periodic shuffles, no reason was given for the unexpected replacement of KCIA Director Shin Jik Soo. However, Washington officials and Korea-watchers believe it is an attempt to place the maximum amount of distance between Mr. Park and the scandal, which involves payoffs to congressmen.

There has been no report that Mr. Shin had a major role in seeking influence with U.S. legislators, and observers here and in Seoul credited him with running his powerful agency in a more respectable way than his immediate predecessor. Nonetheless, there was little surprise at his ousting.



Former Lt. Gen. Kim Chai Kyu, who was named as the new KCIA director, is a lifelong friend of Mr. Park's who comes from the President's home village and was among his classmates at the Korean Military Academy. Those who know him say he has made a career of personal loyalty in such posts as chief of the Army Security Command (1968-1971), deputy director of the KCIA (1971-73) and minister of construction (1973 to the present).

Powerful Post

Because of the virtually unchecked internal authority of Seoul's intelligence-secret police agency and its worldwide quasi-diplomatic network, the KCIA director is often considered the most powerful man in the country next to Mr. Park himself.

The bribery investigations centered in Washington have gone unmentioned in Seoul's controlled press; thus, Saturday's shift may be puzzling to many Koreans.

There was no warning to the U.S. government about the

AP.

Kim Chai Kyu

replacement of Mr. Shin, according to informed sources. However, some officials have taken it as an admission that all has not been well and that Mr. Park is concerned about relations with his major ally.

There is little doubt that the decision last week of Washington KCIA operative Kim Sang Keun to seek refuge in the United States and cooperate with U.S. investigators has sharply height-

Sarkis Said to Prefer 'Technocrats'

...ebanon President Seeking to Form Cabinet

...EIRUT, Dec. 7 (UPI).—Presi... Elias Sarkis conferred with ...anese political leaders today ...assemble a new administration ... the reconstruction of Leb... after 19 months of civil ...

...urces close to Mr. Sarkis said President expected to an...nce his choice of a premier ...in 48 hours.

...olitical sources said the Pres...t was inclined toward a ...net of "technocrats" rather ... a traditional political line-... of "old faces"—thus avoiding problems of assembling a ...ernment from among the ...ers of enemy Moslem and ...istian factions.

...mong the visitors to the pres...tial palace today were Pha...ist party leader Pierre Gemayel, moderate Moslem Premier Rashid Karami, representatives from the leftist alliance and other politicians.

Tension in Tripoli

The political moves were coupled with efforts to defuse tension in the northern city of Tripoli where nearly three dozen persons were killed and many more injured in clashes yesterday between rival Palestinian guerrilla groups.

Fighting broke out last night at the Nahr el-Bared Palestinian camp near Tripoli, a Palestine Liberation Organization spokesman said in Beirut.

The dispute underlined the bad feelings between the pro-Syrian as-Saiqa guerrilla organization and other Palestinian groups.

Apparently, the disagreement flared after a quarrel between a member of Saiqa and a member of the el-Fatah organization of Yassir Arafat Sunday night, in which the Fatah man was killed.

The man's family and friends then reportedly attacked the Saiqa headquarters in the camp, killing 25 of the organization's members, the PLO spokesman said.

Incident Downgraded

A Saiqa spokesman said the incident was "not very important" and that the Syrian-dominated peace-keeping force did not intervene.

The Palestinian news agency Wafa condemned "the irresponsible use of weapons."

"It is a sign of the danger

Miki Cabinet Set To Resign After Party's Vote Loss

By Andrew H. Malcolm

TOKYO, Dec. 7 (NYT).—Premier Takeo Miki presided today over the first Cabinet meeting since Sunday's lower house parliamentary elections handed his Liberal Democratic party its worst defeat in more than two decades.

He told the Cabinet members, three of whom lost their own local re-election bids, that they were only caretakers now and would resign, as required by law, when a special session of parliament is convened later this month to choose a premier. At that session of the expanded 511-seat chamber, the governing Liberal Democrats, who have held strong legislative majorities for 21 years, are expected to hold only 257 seats, including those of eight conservative independents who joined Liberal Democrats late last night to give that party a small majority.

Surprise Defeat

The extent of the party's defeat was surprising to many here. Before the election, they controlled 271 of the 491 seats. Not since 1958 had a Cabinet minister been defeated for re-election, and not since 1947, when a coalition of Socialists and Democrats ran the government for eight months, have opposition parties been so close to seizing power.

No policy changes are expected under the next conservative government, although by necessity there will be increased political bargaining in parliamentary proceedings.

As usual, the major beneficiaries were opposition candidates, but not those espousing radical solutions. The Communists' representation, for instance, fell from 39 seats to 17. The Socialists, who have only just begun to follow the example of their European colleagues in broadening their appeal beyond militant leftists, saw their strength grow by 11 seats to 123. Some of their elderly leaders were defeated.

Safe Alternative

The biggest winners were middle-of-the-road opposition parties. "They offered a safe alternative," said a political expert. The Democratic Socialists, a mildly reformist but non-Marxist party that favors free enterprise and close U.S.-Japanese ties, boosted its Diet membership from 19 to 29.

The Buddhist-oriented Komeito, or Clean Government party, which mixes appeals for pacifism, welfare provisions, clean living and other gradual reforms, jumped from 30 to 55 seats.

But the success that surprised Japanese politicians the most was that of the New Liberal Club, a band of younger conservatives concerned over corruption whose break from the Liberal Democratic party last summer was widely considered as suicidal. The party, which strongly criticized the "do-nothing Diet," entered Sunday's elections with 5 lower house members.

It emerged with 17 members, two of whom received more votes than any of the other 897 Diet candidates in Japan.

Of the 17 successful New Liberal Club candidates, 14 of them received more votes in their multi-member districts than any other candidate. And nine of these were newcomers, unfamiliar to the mass of voters.

Smith Goes To Geneva to Push Talks

Rhodesian Leader Absent for Month

By Robin Wright

SALISBURY, Rhodesia, Dec. 7 (WP).—Prime Minister Ian Smith left for Geneva this afternoon for a last-ditch attempt to save the peace negotiations with four black nationalist leaders.

At the airport, Mr. Smith said he was returning to the talks after a monthlong absence, "to see if I can get people there to talk about the business that we all went to Geneva to talk about."

The negotiations, which opened six weeks ago, have been delayed by debate over an independence date, now set for March, 1978, and by squabbling between black and white delegations over the structure of a transition government.

The Rhodesian leader appeared to be mainly concerned about possible deviation from the original Kissinger plan that might eliminate a role for whites during the interim period.

On Saturday, Mr. Smith charged, "The British conference chairman [Ivor Richard] is perpetuating his complete disregard for the interests of white Rhodesians. His main concern is to pander to the every want of the extreme black politicians, who represent a small fraction of Rhodesian opinion.

"One of the main themes stressed by Dr. Henry Kissinger at the Pretoria meeting [in September] was the need for a solution which would retain the confidence of white Rhodesians in order to ensure the preservation of our high standards of law and order and the retention of that expertise and experience to maintain a vigorous and expanding economy without which Rhodesia would degenerate into a happy hunting ground for Russian and Cuban exploitation."

Clash Expected

Observers here anticipate a confrontation between Mr. Smith and Mr. Richard over a role for whites and the continued delay in discussing the six-point Kissinger plan.

Mr. Smith admitted today that he is returning in order to put the talks back on the subject "of the contract we made. They haven't even started discussing it."

He emphasized that his government would not relinquish the posts of justice and defense, the only two ministerial portfolios that would remain under white control during the transition period, according to the Kissinger plan.

However, he added that he could not foresee his delegation pulling out of Geneva if black opposition increases.

The Prime Minister discounted the possibility of British intervention in the transition period.

Mr. Smith would not discuss what alternatives the government is considering if the talks should collapse. But there are indications in the capital that officials are preparing for the "internal option." This would involve implementing the Kissinger proposals for transition to majority rule within two years under a joint black-white interim government without the four black leaders now negotiating in Geneva —Bishop Abel Muzorewa, the Rev. Ndabaningi Sithole, Joshua Nkomo and Robert Mugabe.

Meanwhile, troops and police combed the bushlands of western Rhodesia below the Zambian border today in search of a black gunman who killed three Roman Catholic missionaries.

The sole survivor of the attack, a nun, told police the gunman said he was a nationalist guerrilla. She said he stopped their car and demanded money, then opened fire with a machine gun.

Those killed were the 71-year-old retired bishop of Bulawayo, the Rt. Rev. Adolph Schmitt; Father Possenti Weggarten; and Sister Maria Francis. The survivor was Sister Ermenfried Knauer.

Ex-Prime Minister Challenges Giscard

Chirac Takes Over Leadership of Gaullists

PARIS, Dec. 7 (IHT).—Former Prime Minister Jacques Chirac was nearly unanimously elected president of the new Gaullist movement Sunday, in a demonstration of support that was an open challenge to the government. A printing union strike prevented press coverage of the meeting.

Mr. Chirac became head of the Rassemblement Pour la Republique, or Rally for the Republic, which replaces the old UDF party that has existed under various names since the early 1950s.

In rousing tones, Mr. Chirac told an audience of about 40,000 in the Palais des Sports at the Portes de Versailles that the new movement was the key to defeating the Socialist-Communist alliance in the 1978 elections. He defied the government on several important issues.

The meeting got off to an unsure start when it was announced that a printing union strike would black out newspaper reports of it. Justice Minister Olivier Guichard, a Gaullist, was booed, and prominent Gaullists suggested that the government was to blame.

Coincidence Noted

Several commentators pointed to the coincidence between the Gaullist meeting and the ordering of the police into the occupied plant of the Parisien Libéré. Relations between the Gaullists and the Independent Republicans have deteriorated to the point where some Gaullists were suggesting that Michel Poniatowski, the interior minister and IR party chief, was sabotaging the meeting. Yves Guena, deputy Gaullist party leader, called the government action "sad scheming."

The final tally gave Mr. Chirac 96.5 per cent of the party vote, 11,952 votes in favor, 304 against and 202 abstentions. It was a personal success for the man who has almost single-handedly revived the party following the deaths of Presidents Charles de Gaulle and Georges Pompidou and the election of President Valéry Giscard d'Estaing.

Mr. Chirac used much of the old Gaullist vocabulary to appeal to the throng and urged their support to defeat the left in 1978. He spoke of "national independence" and "sovereignty" and the Gaullist refusal to accept "outside interference" in French affairs and rejection of "collectivism" in internal affairs.

He defied Mr. Giscard d'Estaing and the government on the question of selecting candidates for the 1978 elections. Usually, delicate negotiating has taken place among Gaullists, Independent Republicans, centrists and Radicals on investiture of candidates, with disputes being arbitrated by the Prime Minister.

The Gaullists have been offended by Mr. Giscard d'Estaing's designation of Michel d'Ornano, an IR politician, to run for the revived post of mayor of Paris next spring. Mr. Chirac responded Sunday by saying, "We alone will give investiture. We don't accept supranationality in this, or any other, domain"—a reference to the Gaullist-government dispute on direct elections to the European Parliament.

Mr. Chirac indicated that he was stopping short of taking the Gaullists out of the majority, but he and other speakers stressed the gulf between themselves and Mr. Giscard d'Estaing. Mr. Guena, in particular, pointed out that Mr. Chirac quit as prime minister in August because "he was prevented from governing, that is, from correcting a deteriorating situation, though for months he had had the will and ideas to restore it."

Walkout of Paris Printers Climaxes 20-Month Dispute

(Continued from Page 1)

the strike, though not early enough for newspapers to meet normal deadlines for tomorrow's editions.

Union spokesmen announced that the strike was being suspended, not ended.

The conflict broke out early last year when Mr. Amaury announced his intention to move Le Parisien Libéré out of Paris, to areas not controlled by the Syndicat du Livre. The move was opposed by the union, which said that 650 Paris printers' jobs would be lost.

Mr. Amaury was not the first Paris publisher to try to escape the union's control. A few years earlier, Combat, a slim, leftist-leaning Paris daily, also moved to the suburbs to find independent printing unions. Other Paris newspapers have felt the squeeze, and two of them, Le Figaro and France-Soir, are still working on new formulas for moving out of Paris.

Unlike any other union in France, the Syndicat du Livre has exclusive bargaining rights and a union shop within the profession. This gives it a strength that few other unions have. While other industries have Socialist, Christian and independent unions to rival the CGT, the Paris printing trades are the exception. This situation dates from the Liberation, when most union members, journalists and owners connected with newspapers that published during the German occupation were purged. The Communist union filled the vacuum.

Union Monopoly

Mr. Amaury's anti-Communist views are well known, and when he decided to close his plant here and move to the suburbs, the union saw it as an attempt to break their Paris monopoly. The Parisien Libéré had no trouble finding printers belonging to Force Ouvrière, an independent union, to print it in Chartres, Amiens and St.-Ouen.

Mr. Amaury has been criticized by some other publishers, such as Mr. Sauvageot, for his manner in dealing with the syndicat. Most Paris newspapers, facing the same problems of automation and decentralization, have favored negotiating with the union, particularly on the sensitive issue of how to replace men who lose their jobs because of changes to modern printing technology.

Giscard and Tito Agree Détente Applies to All

BELGRADE, Dec. 7 (UPI).—France and Yugoslavia agreed today that real détente does not apply only to the superpowers but is based on respect for the independence and equality of all nations and the absence of interference in their internal affairs.

The agreement between a member of the Atlantic alliance and a Communist leader of the Third World came in the form of a joint communiqué signed by President Valéry Giscard d'Estaing and President Tito.

It climaxed Mr. Giscard d'Estaing's two-day official visit, the first to this Balkan nation by a French head of state. Both Presidents called it "a historical moment."

"It was one of the best visits here of a president and we're very satisfied with it," Marshal Tito said following his final round of talks with Mr Giscard d'Estaing.

A Yugoslav spokesman quoted Marshal Tito as saying to Mr. Giscard d'Estaing, "Yugoslavia is a hard nut to crack for any aggressor. There are several reasons for this. Some of them stem from the objective international situation making aggression against Yugoslavia today futile."

There has been widespread speculation of possible Soviet military intervention here after the death of Marshal Tito, who is 84.

Attempt to Heal Bonn Opposition Split Is Failure

BONN, Dec. 7 (AP).—Attempts failed yesterday to repair the split in the 27-year parliamentary alliance of West Germany's Christian Democratic Union and its Bavarian wing, the Christian Social Union.

Eight weeks after the conservative defeat at the polls, the CSU of former Defense Minister Franz Josef Strauss decided to cast their 53 votes as an independent party in the new Bundestag, the lower house of parliament, which convenes next Tuesday.

CDU Chairman Helmut Kohl, unsuccessful candidate for the chancellorship in the Oct. 3 general elections, decried the split and threatened that his party would compete against the CSU on its home ground unless the decision was reversed.

Chancellor Helmut Schmidt's ruling coalition of Social Democrats and Free Democrats lost votes, but maintained a 10-seat edge over the joint opposition.

After a final six-hour meeting with Mr. Strauss, Mr. Kohl, who heads the 190-strong CDU parliamentary faction, read a joint statement to reporters admitting failure but giving no indication as to the future modus of cooperation between the two parties.

Alaska Pipe Complete

ANCHORAGE, Alaska, Dec. 7 (UPI).—The entire 800-mile Trans-Alaska Oil Pipeline is finally in place. The last section of 48-inch pipe was laid Sunday in rugged Thompson Pass, 20 miles northeast of the terminal at the ice-free port of Valdez, the Alyeska Pipeline Service Co. has reported.

Fertilizer, Farm-Gear Firms In U.S. Eye China as Market

By Dan Morgan

WASHINGTON, Dec. 7 (WP).—U.S. producers of farm machinery and agricultural chemicals are looking with modest hope toward China as a potential new market.

For centuries, Chinese agriculture has been based on the labor of hordes of peasants using primitive farming techniques.

But there are hints of change in Peking policy.

Executives attending a recent daylong seminar on China's agriculture said that Western "agribusiness" methods would be needed to diversify the country's rice-based diet, keep pace with population growth, reclaim arid lands for farming and raise the living standards for the 785 million rural Chinese living in vast communes.

That view was supported by several academic experts who said that massive capital investment would be needed in the next phase of the country's agricultural development.

China's push toward farm mechanization and modernization began under the late Chairman Mao Tse-tung, but the future of Western technology sales and farm exports to China was uncertain during internal political struggles that took place in the first nine months of this year.

But power now is in the hands of a new regime of economic pragmatists led by Hua Kuo-feng, who is both party chairman and head of the government as Premier. As a result of that group's ascendancy, U.S. multinational firms are stepping up their campaign to improve their access to the potentially huge Chinese market.

Representatives of U.S. firms making insecticides, fungicides and herbicides, including Dow Chemical, Du Pont and Monsanto, arrived in China Nov. 17 for "technical talks."

In 1973, China turned to a U.S. firm for help in increasing chemical fertilizer production. It bought eight ammonia plants from the Pullman Kellogg Co. and eight urea plants from a Pullman Kellogg affiliate in the Netherlands. The first two plants in the $300-million complex, one of the world's largest, are scheduled to start producing fertilizer before the end of the year.

That investment, coupled with potash and phosphate imports, is aimed at overcoming a serious fertilizer deficit. Between 1966 and this year, China increased its output of chemical fertilizers from 10 million to 30 million tons a year. But experts at the St. Louis conference on China's agriculture said that up to half of all the nutrients applied to the ground are made up of animal manure, night soil and mud from lakes.

China is the world's leading producer of rice and grain, and its requirements for foreign food are minimal. From 1972 to 1975, the United States sold China a modest 8 million tons of corn and wheat to make up for disappointing harvests. This year, China's agricultural purchases in the United States totaled only 22,000 tons of onion and carrot seeds.

But several experts said substantial industrial investments in agriculture will be needed to maintain that level of independence.

The rate at which rice yields increase has slowed in the last few years. Because only 10 per cent of China's land is cultivated, large amounts of irrigation equipment, machinery and fertilizer probably will be needed to open up the country's dry northern plains to farming.

Large portions of the Chinese farm economy are still in the private sector. Most poultry and vegetables are grown on private plots in communes. Experts at the recent seminar said Peking planners might enlist the aid of foreign agri-business firms in setting up large poultry operations that could be brought under the jurisdiction of state-managed collectives.

Soviet Atom Blast

STOCKHOLM, Dec. 7 (UPI).—The Uppsala seismological institute today recorded an underground nuclear explosion with a 6.7 Richter scale magnitude in the Semipalatinsk test area in Siberia.

Qadhafi Confers In Moscow With Soviet Leaders

MOSCOW, Dec. 7 (AP).—Libyan Leader Moamer Qadhafi held a new round of talks today with Soviet party General Secretary Leonid Brezhnev and President Nikolai Podgorny, Tass reported.

Premier Alexei Kosygin and Foreign Minister Andrei Gromyko also attended the talks, Tass said without revealing the subject of the discussions.

Col. Qadhafi arrived in Moscow yesterday for an official visit.

Libyan and Soviet leaders agreed yesterday to broaden their cooperation "in the political, economic, cultural and other spheres in the interests of the peoples of both countries," the official Soviet news agency reported.

Both sides also repeated long-standing positions that a Middle East settlement must include Israel's withdrawal from Arab lands occupied since 1967 and national statehood for the Palestinians.

30 Million Vaccinated In Swine Flu Drive

ATLANTA, Dec. 7 (AP).—More than 30 million in the United States have been inoculated against swine flu since Oct. 1, the National Center for Disease Control announced last week. However, only five states and Puerto Rico have exceeded 50-per-cent immunization, a spokesman said.

Federal health officials have said the program is now in its most critical period. The government seeks to vaccinate as many as 200 million

Associated Press.

OUTGOING AND INCOMING—Secretary of State Henry Kissinger with his designated successor, Cyrus Vance.

Vance Meets With Kissinger To Begin Transition Process

By Murrey Marder

WASHINGTON, Dec. 7 (WP).—Secretary of State-designate Cyrus Vance began training yesterday with Secretary of State Henry Kissinger, who left today on his last scheduled official trip abroad, to the NATO ministers' meeting in Brussels.

The two men met for two hours late yesterday in Mr. Kissinger's office. The meeting was preceded by glowing expressions of mutual admiration before reporters and photographers.

The two men have known each other for years. Mr. Kissinger said, "I will do my utmost to make certain that this is a transition in which Mr. Vance can take over from the first day" he is officially on duty. On Friday, he called the Vance appointment "outstanding." Today he added, "brilliant."

Mr. Vance, saying, "Thank you, Henry, very, very much," added that "nobody could have been nicer and more helpful" than Mr. Kissinger in assuring a cooperative transition.

He said that he and Mr. Kissinger "are going to spend a good deal of time together while I learn from him."

Kissinger Trip

That process will be interrupted, however. Mr. Kissinger's trip to the Atlantic alliance's Council of Ministers winter meeting in Brussels will be followed by talks in London before his return to Washington this weekend.

Mr. Kissinger told reporters that in Brussels he will present to the NATO council "a statement of support" from President-elect Jimmy Carter, given to Mr. Kissinger when he visited Mr. Carter in Plains, Ga.

Mr. Vance declined an invitation to accompany Mr. Kissinger to the NATO meeting. Instead, Mr. Vance said, for the next 10 days he will be traveling between Washington and his New York office to arrange his affairs before settling into a transition office in the State Department until he is confirmed by the Senate.

Blacks in Battle Over Strike Call Near Cape Town

CAPE TOWN, Dec. 7 (Reuters).—Fighting erupted yesterday between young black militants and tribal elders in the nearby African township of Nyanga, and 14 people were wounded by police bullets.

Police said they fired several times to curb riots and prevent arson attacks on private homes.

They said the fighting was primarily caused by a "difference of opinion" between youths calling for a two-day strike, scheduled to start yesterday, and migrant workers who refused to halt work. Most of the migrants belong to the Baca tribe and the youths to the Xhosa tribe.

A police spokesman said last night: "The fighting began when the strike was due to start. Black youths were running around in packs, setting houses on fire and attacking older blacks as they set off for work. You could call it a battle of the generations." He said the police had brought the situation under control by midday.

Today, a stick of dynamite exploded as a black man placed it on a table in a restaurant crowded with whites in a shopping center in central Johannesburg, police said. The man was seriously injured and was put under police guard in a hospital. A restaurant employee was slightly injured; he was the only casualty.

Greece's Airports To Be Modernized

ATHENS, Dec. 7 (Reuters).—The Greek government has pledged to modernize the country's airports after local pilots refused to fly at night and in bad weather because they claimed there was inadequate ground guidance.

The action by pilots of the state-owned Olympic Airways at a meeting of their association last week has stopped night flights on a third of all domestic routes.

First Since Fifteenth Century

Jews End Madrid Meeting, Shun Audience With Monarch

MADRID, Dec. 7 (UPI).—Nahum Goldmann and other leaders of the World Jewish Congress rejected a possible meeting today with King Juan Carlos because, they said, the Spanish government snubbed their conference in Madrid.

The European branch of the WJC yesterday ended a three-day meeting, the first such gathering here since the Jews were expelled from Spain in 1492. There were plans for Mr. Goldmann, the congress's president, and his colleagues to meet with the Spanish monarch today.

Arab Protests

"The congress notes with regret that the presence of an international meeting of leaders of Jewish communities was not considered in this historical context but rather in the context of day-to-day Spanish-Arab relations," a final communiqué from the congress said.

Arab diplomats had lodged protests against the presence in Madrid of the Jewish meeting. They said it was aimed at bringing pressure on Spain—which maintains close relations with the Arabs—to recognize Israel.

At the conference's opening session on Saturday night, the government representative who was to greet the Jewish delegates canceled his appearance at the last minute.

"Under the circumstances, the congress decided to withdraw its request for an audience with his majesty," the communiqué said.

There was no immediate reaction from Juan Carlos's palace.

An hour before the congress made its announcement, a Spanish diplomatic source had said he thought that the King was going to receive the Jewish delegation.

The affair was a blow to the 12,000-member Spanish Jewish community, which had considered the conference and the proposed royal audience as an opportunity to enhance its members' national standing.

After the end of the conference at a downtown hotel, the Jewish leaders from 17 European countries went to a suburb, Moraleja, where they laid the foundation stone of what is to be the first Jewish school constructed in Spain since the 15th century.

500 Hungarians Apply To Return in Amnesty

BUDAPEST, Dec. 7 (Reuters).—More than 500 Hungarians who left the country illegally have accepted a government amnesty allowing them to return home, authorities announced.

The city's chief public prosecutor, Karoly Csok, said in a newspaper interview that those returning were covered by an amnesty announced last year, which canceled criminal charges against Hungarians living abroad illegally if they returned or registered their intention of doing so by the end of this year.

House Democrats Choose O'Neill as Speaker

(Continued from Page 1)

represented in the House by John F. Kennedy. Known as "Tip," he was elected Democratic whip in 1971 and majority leader in 1973. He will move up to the speakership held by Carl Albert of Oklahoma, who is retiring.

Although the election of Rep. O'Neill was certain, the race for the majority leadership was a four-way brawl among Reps. Wright, Burton, Richard Bolling of Missouri and John McFall of California.

Rep. Wright, 53, is a moderate who was given little chance of beating his more liberal opponents at a time when the House has become increasingly filled with young, liberal representatives and when the onetime strength of the Southern power barons has clearly waned.

His election showed that leadership contests tend to turn more on personality than on ideology.

Earlier, Rep. Thomas Foley of Washington defeated Rep. Shirley Chisholm of New York, 194 to 96, for the position of caucus chairman, a post being vacated by Rep. Burton.

For the first time, the caucus to elect leaders was held in open session and the packed galleries watched one of the most dramatic scenes in years on the floor of the House.

After the third ballot, the tellers who were bringing the results into the chamber were surrounded by dozens of congressmen, and the word leaked out that Rep. Wright had won moments before it was announced officially.

Rep. Wright is one of the most extraordinary public speakers in Congress and his victory speech was a mixture of humor, humility and partisan rhetoric.

He began by saying, "We Texans are not new to landslides," an apparently joking reference to the fact that Lyndon Johnson had won his first election to the House by a handful of votes and was known for years as "Landslide Lyndon."

Rep. Wright then pledged to his colleagues to be a "good listener" and to take their advice on legislative matters. Finally, he promised to promote "progressive legislation that will lift this country out of the slough of recession."

Earlier, Rep. O'Neill had given a similar acceptance speech. He promised to be "fair and honest" in parliamentary matters but to be a partisan leader on matters of substance.

Rep. Wright, who comes from Fort Worth, is more moderate than many of his Southern colleagues. He has often supported civil rights legislation and aid to urban areas. He supported the war in Vietnam but has taken little part over the years in foreign affairs.

He voted in favor of aid to New York City last year and has generally taken a liberal stand on economic matters. The only exception has been on energy legislation, on which he has tended to take the side of the major oil producers.

Rep. Wright's main interest has been the Public Works Committee, of which he was scheduled to become chairman next year. Because the majority leader is not eligible to be a committee chairman, that post will probably go to Rep. Harold Johnson of California.

Firing of Korea CIA Leader Seen Reaction to U.S. Probe

(Continued from Page 1)

ened concern in the Park government and among U.S. diplomats about the long-term consequences of the scandal.

Financial Chief

The reported "bookkeeper" of the KCIA's Washington financial records since the early 1970s, Mr. Kim was in a position to have detailed knowledge of transactions involving U.S. political figures.

Since the "bookkeeper" went over to the FBI, a KCIA bureau director from Seoul reportedly turned up in Washington. The KCIA station chief here, air force Maj. Gen. Kim Yung Hwan, is reported to have been ordered to return to Seoul. There are some indications that all KCIA officials in the Washington embassy may be replaced.

Three years ago, the previous top official of the KCIA, Lee Hu Rak, was replaced in the face of growing criticism in Japan and the United States of the agency's strong-arm methods.

The expectation in Washington is that little more will be heard of the latest senior aide to be sacrificed by Mr. Park, at least until the current scandal has ended.

Pieter Menten

Dutch Fugitive Takes Overdose After His Arrest

ZURICH, Dec. 7 (Reuters).—Wealthy Dutch art dealer Pieter Menten, 77, wanted in the Netherlands for questioning about his wartime activities, swallowed sleeping pills and was rushed to a hospital shortly after being detained here last night, police said today. They reported that he was out of danger.

A police spokesman said Mr. Menten, who disappeared from the Netherlands a month ago, was arrested in a hotel near here on a warrant issued in The Hague to Interpol, the international police organization.

The Dutch public prosecutor ordered Mr. Menten's detention on Nov. 15 for questioning about allegations that he was involved in the execution of Jews by German troops in southeastern Poland during World War II.

The police official here said that under Swiss law Mr. Menten would normally not be answerable for any crimes committed before 1971. But in The Hague, a spokesman said Mr. Menten could be extradited under a Swiss-Dutch treaty.

The Zurich official said that at the police station last night, the art dealer told officers he was a diabetic and then swallowed the sleeping pills.

Carter Boosts Ohio Margin In Recount

COLUMBUS, Ohio, Dec. 7 (AP).—President-elect Jimmy Carter carried Ohio by 11,116 votes in a recount completed yesterday. Another recount has been started in Oregon, a state President Ford carried by 1,559 votes.

The Ohio recount showed Mr. Carter with 2,011,621 votes and Mr. Ford with 2,000,505. The first count gave Mr. Carter a 9,333-vote edge.

In Oregon, the original count gave Mr. Ford 491,909 votes and Mr. Carter 490,350. Mr. Ford's margin of victory was less than one-sixth of 1 per cent of the votes cast. Oregon law requires a recount when the spread between two major contenders is less than one-fifth of 1 per cent of votes cast.

Edward Heath

Heath Defies Tory Leader On Devolution

LONDON, Dec. 7 (AP).—Former Prime Minister Edward Heath stoked up the feud yesterday between him and his Conservative party leader, Margaret Thatcher.

In a speech at Glasgow, Mr. Heath declared his support for the Labor government's bill to give limited self-rule to Scotland and Wales. Mrs. Thatcher ousted Mr. Heath from the Conservative leadership after he lost three general elections, has demanded total opposition to the bill by all the 280 Tories in the House of Commons.

Mr. Heath said: "It is unthinkable that those of us who have for so long believed in this principle should be expected to vote against it."

Tarnished Image

About 20 Conservatives are known to be unhappy over the devolution bill, as it is called, and they abstain in future votes during its progress through Parliament, the bill is certain to win House approval and the image of a united Conservative party determined to drive Labor from office will be tarnished.

Mrs. Thatcher appeared to draw back from a confrontation with the Heath faction last night by announcing a conscience clause for legislators who do not want to oppose the devolution bill.

"I have never been afraid to stand up for my convictions in the past. I am not going to change now," said Mrs. Thatcher, who has backed the idea of a Scottish legislative assembly for eight years.

The former Prime Minister said that devolution "is the only way of keeping Scotland within and maintaining the unity of the United Kingdom."

Mr. Heath is supported on the devolution issue by half a dozen Scottish legislators in the Tory leadership. In addition, a group of about 30 Tory supporters of Mr. Heath in the House of Commons dislike the rightist policies of Mrs. Thatcher and the men around her.

Mistrial Called In Mandel Trial After Fix Attempt

BALTIMORE, Dec. 7 (AP).—A mistrial was declared today in the political corruption trial of Maryland Gov. Marvin Mandel and four codefendants in the aftermath of alleged attempts to tamper with the jury. The court ruled that publicity had not interfered with the sequestered jury.

The prosecution asked U.S. District Judge John Pratt to warn jurors not to discuss the case with anyone because of the "necessity of another trial." But no immediate request was made for a new trial.

Six jurors had heard a broadcast report of the alleged jury tampering.

Speaking to reporters outside the federal courthouse, Gov. Mandel said that he had "very mixed emotions" about the mistrial and said that Judge Pratt was in a difficult position.

"I really feel we were starting to present evidence in the case that would vindicate me completely from the charges," he said. "The evidence would show there was absolutely nothing to it."

Judge Pratt said that he granted the defense motion for a mistrial reluctantly, but was convinced that events following disclosure last Friday of two alleged juror fix attempts had made it virtually impossible for Governor Mandel and the others to get a fair trial.

Swiss Vote to Keep 48-Hour Work Week

GENEVA, Dec. 7 (UPI).—The Swiss have voted overwhelmingly against reducing the work week to 40 hours.

The national referendum Sunday was initiated by small Socialist and progressive parties. It had been fiercely contested by the more powerful centrist and right-of-center political groupings. Switzerland has a 48-hour working week. Seventy-eight per cent of the voters chose to keep it that way.

Filipino Storm Toll 36

MANILA, Dec. 7 (AP).—The death toll from a tropical storm that swept the Philippines rose to 36 today as more bodies were recovered in northern Samar and Sorsogon province, 230 miles southeast of Manila.

Sarkis Seeks New Cabinet

(Continued from Page 1)

presented by those who conspire against the Palestinian revolution and who now are trying to instigate Palestinian-Palestinian fighting in the camps so as to weaken the political and military stance of the Palestine revolution," Wafa said.

On the political scene, a leading contender for the job of premier was Selim al-Hoss, President Sarkis's financial adviser.

Rightist leader Camille Chamoun called for a "strong government" because "the situation is not normal yet and security is not completely restored."

Mr. Chamoun and other rightist leaders favor regional autonomy along the lines of the Swiss cantonal system at a later stage.

Carter Aides Discover Bomb

WASHINGTON, Dec. 7 (AP).—Transition staffers for President-elect Jimmy Carter found a bomb in their offices yesterday. It was defused by the police.

"It appeared to be a capable explosive device," said Sgt Charles Collins, a police spokesman.

The bomb was contained in a package found in the mailroom of the fifth-floor offices in the Department of Health, Education and Welfare building being used by the Carter transition team.

"It's not known how the package got into the building," Sgt. Collins said.

Ex-Congressman Subpoenaed

WASHINGTON, Dec. 7 (NYT).—The Department of Justice has issued a subpoena for the testimony and records of former Rep. Cornelius Gallagher, D-N.J., in its investigation of alleged South Korean influence-peddling and bribery, government and legal sources said.

The sources also said that the department was expected soon to subpoena Park Tong sun, a Korean businessman.

George Koelzer, a Newark lawyer who is representing Mr. Gallagher, confirmed that on Tuesday he accepted on behalf of Mr. Gallagher a subpoena that called for the former congressman to appear before a federal grand jury here and produce certain records.

Federal investigators want to ask Mr. Gallagher whether he distributed bribes to other representatives and senators on behalf of Mr. Park and the KCIA, a source said. Mr. Gallagher had told associates that he did not act as a conduit for money from Mr. Park or the South Korean government, the source said.

On Exclusion of Capital-Penalty Foe From Jury

Supreme Court Upsets a Death Sentence

WASHINGTON, Dec. 7 (AP).—e Supreme Court ruled yester-y that the exclusion of even e juror opposed to capital pun-ment invalidates any death alty imposed in a trial.

The justices also postponed in-finitely the execution of a ndemned Texas murderer, bert Excell White, who wanted no delay in the sentence, which had been scheduled for Friday.

In a 5-3 decision, the court threw out the death sentence of a condemned Georgia murderer, Curfew Davis, because one prospective juror at his trial was excused after stating general scruples against capital punishment.

The high court postponed pending appeal, White's death in a Texas electric chair. Only Justice William Rehnquist voted in favor of letting White become the first criminal to be executed in the United States since 1967.

The court last week postponed the firing-squad execution for murder of Gary Mark Gilmore, who had persuaded Utah officials to let him die at sunrise yesterday.

In the Davis case, attorneys contended that the excluded juror was never asked whether she could set aside her general scrupules against the death penalty in that particular trial.

A 1968 Supreme Court decision in an Illinois capital-punishment case said that the exclusion of such jurors deprives defendants of their right to be judged by a cross-section of the community.

But the court never spelled out how many jurors would have to be so excluded before the jury could be considered biased in favor of capital punishment. In an unsigned majority opinion, the court said yesterday that it takes only one improperly excluded prospective juror to taint the sentence.

Attorneys active in the battle against the death penalty said the decision could have wide-ranging consequences. Most important, they said, it "revitalized" the court's 1968 decision that jurors opposed to the death penalty in general could not be excluded from capital-punishment cases.

Chief Justice Warren Burger, and Justices Rehnquist and Harry Blackmun dissented, saying that the majority had extended the principles of the 1968 decision too far.

California Court Acts

SAN FRANCISCO, Dec. 7 (AP). —The California Supreme Court ruled today that the state's death penalty is unconstitutional in light of recent U.S. Supreme Court decisions.

The unanimous decision, written by Chief Justice Donald Wright, held that California's capital punishment law is invalid since it violates current Supreme Court guidelines regarding imposition of the death penalty.

The decision said the state's death penalty law makes "death a mandatory punishment for those categories of first-degree murder encompassed by the special circumstances ... without provision or consideration of mitigating circumstances."

arter May Postpone Plans or 'Zero-Base Budgeting'

By David S. Broder

WASHINGTON, Dec. 7 (WP). a key congressional chairman s advised President-elect Jimmy rter to postpone his promised roduction of "zero-base bud-ing" for all departments of the eral government.

ep. Jack Brooks, D-Texas, the irman of the House Govern-nt Operations Committee, said t week that he has urged Mr. rter to hold off on his pledge a massive and far-reaching rhaul of the way in which the eral budget is assembled.

Zero-base budgeting was de-ibed by Mr. Carter in countless mpaign speeches as a basic tool eliminating outmoded pro-ms and getting more results m the taxpayer's dollar.

In contrast to existing gov-mental budgetary procedures, ich concentrate on examining e increments or add-ons to ious years' spending, Mr. rter said zero-base budgeting uld guarantee that "we strip wn the budget each year to to and start from scratch, re-iring every program that ends the taxpayers' money to justify itself annually."

Calling the present federal dget process "inefficient, cha-tic and virtually uncontrollable either the president or Con-ess," Mr. Carter said in many mpaign speeches that he would stitute zero-base budgeting "by ecutive order the day I become sident."

But hearings before the House dget Committee last summer oduced testimony by budgetary perts that rapid introduction of zero-base budgeting could over-whelm both the executive branch and Congress and, as one of them put it, "lead to a paperwork process that is mind-boggling even by Washington standards."

Last week, those warnings took on new political force when Rep. Brooks—whose cooperation is essential for Mr. Carter's expressed determination to reorganize the executive branch—gave the President-elect a memorandum urging that he rethink the promise to plunge the government into a brand-new budget process immediately upon taking office.

"Realistically," Rep. Brooks said this week, "it's going to be very difficult to do that. We don't have the capability for the massive auditing and evaluation reviews zero-base budgeting would require."

Instead, he said, he urged Mr. Carter to begin more slowly, by "restructuring and re-equipping the Office of Management and Budget so it will have the organizational capacity to re-evaluate honestly on a yield basis the programs and agencies now operating.

"If we give OMB that responsibility and the tools, they can do a pretty good zero-base review of the agencies they decide are most in need of improvement," Rep. Brooks said.

Mr. Carter, who brought zero-base budgeting experts from private industry to the Georgia government during his term as governor, is known to be anxious to fulfill his repeated campaign promise to institute the new technique immediately in Washington.

But he promised Rep. Brooks at their meeting in Washington last week to study his memorandum.

arter Aide mends His ax-Cut Talk

By Helen Dewar

PLAINS, Ga., Dec. 7 (WP).— esident-elect Jimmy Carter k issue yesterday with a state-nt Sunday by Bert Lance, di-tor-designate of the Office of nagement and Budget, that a cut is "almost a certainty" er Mr. Carter takes office t month.

ater yesterday, Mr. Lance dified his prediction, telling wsmen in New York that a cut was only a "leading tion."

The brief difference of opinion, ich occurred three days after Lance was appointed, surfac-when Mr. Carter was asked by wsmen if he agreed with Mr. ce's prediction that a tax cut s almost certain. "I wouldn't it that strongly," Mr. Carter d. He reasserted that an eco-ic stimulus probably will be ded but that he has not yet ided whether it will include ax cut.

fter voting in this town's oral election, Mr. Carter also:

Reasserted that he favors the th penalty for some crimes, he did not identify them.

Indicated more strongly than re that he is considering a don for Vietnam draft evad-that may include an estimat-250,000 young men who never istered for the draft, most of om he described as "poor and orant people who were never ure of what the law is."

Said he has an "open mind" ut construction of the contro-ial B-1 bomber and insisted was consistent with his cam-n statements questioning the its of the projected $229-bil-program.

Announced that he would go Atlanta today to continue in-iewing prospective Cabinet ap-tees before flying to Wash-ton late tomorrow for two days consultation with Pentagon, gressional and business lead-

r. Carter did not criticize Mr. ce, an Atlanta banker and time adviser whom he named lay as his first choice for a estic Cabinet-level post. But response to newsmen's ques-s, Mr. Carter made it clear t Mr. Lance was not speaking him when he said on CBS's ce the Nation" television pro-n that the means for stimulat-the economy are "so limited t I think you have to consider t [a tax cut] almost a cer-ty."

I have advisers who are lean-in all different directions," Carter said. He confirmed rts that economic advisers he with here last Wednesday ched no agreement on the ad-bility of assigning a tax cut her priority over spending pro-ms aimed at increasing job ortunities.

he panel of industrialists and nomists reportedly agreed only t an economic stimulus of up $25 billion may be required—billion more than previously gested.

Joint East-West Enterprise Limping Along in Romania

By Peter Osnos

BUCHAREST, Dec. 7 (WP).— The founding of Rom Control Data SRL here three years ago was something of a historic event: the first time a U.S. company had joined with a Soviet-bloc country in a jointly owned enterprise, in this case a factory for assembling computer equipment.

For all the talk in recent years about the benefits to East-West political and economic relations of such ventures, it comes as a surprise to discover that there are still only two involving U.S. firms. The other is Radel-Kis, a chemical plant owned by Corning Glass and Hungary that is just getting under way.

Rom Control Data SRL therefore provides the best available record on how this complicated form of sharing between capitalists and Communists works.

Thus far, the joint effort of the Control Data Corp. of Minneapolis and Romania's Industrial Group for Electronic and Calculating Techniques has been successful in attaining every objective set for it except one: making money. The venture was supposed to turn a profit in its second year but did not and still operates at a loss.

Having overcome a host of other obstacles—problems of language and laws, assuring quality in output and splitting the original $4-million investment equitably—the backers are confident that Rom Control Data SRL can make it. But there is an important caveat: Export licenses must be granted by the United States for production of more advanced equipment.

"What they let you build is obsolete and you can't sell," complained Calin Spiride, the 34-year-old Romanian manager of RCD. "And what you could sell, they won't let you have ... We can continue to run a good, clean plant with good-quality merchandise but unless we have markets it all doesn't matter."

That outburst of frustration at the end of a long and otherwise good-humored interview last week focuses the dilemma faced by Control Data and other U.S. companies interested in similar forms of cooperation in Eastern Europe; namely, the reluctance of U.S. officials to permit the sale of technology that might be converted to military use.

Yet it is precisely such modern technology that the Eastern European countries tend to be most interested in. They are anxious to bolster their economic strength with the introduction of more efficient techniques, which is the basis of Western concern about helping them too much. They also want to sell products that will earn them hard currency for buying even more technology and paying off credits.

Control Data, a major U.S. company with substantial interests around the globe, doubtless recognized the difficulties ahead when it signed on with the Romanians. Nonetheless, the fledgling effort suffered an unexpected setback. Its initial line of card punchers and card readers turned out to be obsolete even before production actually began, according to Robert Schmidt, the senior Control Data executive who negotiated the project.

After that, it was not until early last year that RCD came up with another acceptable item, a drum-type printer that is now the factory's main product. But it, too, has little appeal to buyers with access to later models. So sales are primarily inside Romania and to other Soviet-bloc countries —not enough of a market to be profitable.

Last March, Control Data again applied for a license, this time to export an RCD disc-drive auxiliary memory unit. If promised U.S. government approval is given, the application will go to a review committee of the North Atlantic Treaty Organization and only then can tooling up begin in earnest.

In the meantime, RCD's modern factory on the outskirts of Bucharest serves as a useful—if expensive—laboratory for testing such close relations between East and West.

"These countries are close to being industrialized and they are basically stable," said Mr. Schimdt in an interview in Vienna. "Compared to Africa, India and South America, they are far more promising to us."

But setting up in the Soviet bloc has other drawbacks besides the restrictions imposed by the U.S. government. The motto of businessmen in this part of the world, another Control Data executive said, is "patience, perseverance and persistence." Layers of cumbersome bureaucracy, limited access to end users, insistence on overly generous credit terms, the inconvertibility of Communist currencies, social and cultural differences—all make bargaining hard.

Associated Press.

AFTER THE VOTE—Jimmy Carter, who made it, consoles his brother Billy, who didn't even come close.

Billy Carter Loses Mayoral Bid In Plains—Beer Flows Anyway

PLAINS, Ga., Dec. 7 (WP).—Billy Carter, the younger brother of the President-elect, lost his bid to become mayor of the Carter family's hometown of Plains yesterday but the celebrated anyway.

The beer was already flowing at Billy's filling station, which was election central for the "good ole boys" of Plains, when word came from the city hall next door that he had lost 90 to 71, to the incumbent mayor, A.L. Blanton. It did not stop.

Shortly afterward, Jimmy Carter arrived at the gas station to commiserate with Billy and said, "I think his brother probably cost him the election. People in Plains probably think they have enough Carters winning elections."

Succinct Analysis

Billy Carter's analysis of his defeat was succinct. "I lost the black vote, I lost the white vote, I lost the Baptist vote," said Mr. Carter, 39, as he addressed rain-drenched newsmen between the gas pumps and the beer keg.

He had lost by only four two years ago to Mr. Blanton, the town barber and a flight controller at the Albany, Georgia, airport. Mr. Carter was equivocal about his political future.

He said he might move out of town or to Australia. His campaign was aimed at preserving the small town flavor of this hamlet of 683 people against the onslaught of tourists.

"I see Plains going straight to hell," he said.

Before it did, he said, he would carry out his campaign promise to chop down a 25-foot-high plastic Christmas tree that the town erected—a symbol to him of the tacky future.

"The tree will fall when there's no witnesses around," Billy said, grinning but apparently meaning it.

GAO Study Questions Future Of U.S. Breeder-Reactor Plan

By David Burnham

WASHINGTON, Dec. 7 (NYT). —President Ford's recent policy statement on the dangers of plutonium has raised doubts about the development of an experimental reactor which has been hailed as the solution to the nation's energy crisis, the General Accounting Office said last week.

The report by Congress's investigating and auditing agency concerned the liquid-metal fast-breeder reactor, the largest single energy research project ever undertaken by the United States.

Government and industry energy planners have repeatedly expressed hopes that the breeder reactor—which so far has cost $3 billion—can be developed into an essentially inexhaustible source of energy to replace the increasingly scarce and expensive oil and natural gas.

But the GAO's second major report on the breeder, while avoiding any flat predictions, posed a number of questions about whether this goal will be achieved.

Weapons Production

A major new possible constraint on the breeder, the GAO said, was Mr. Ford's Oct. 28 statement spelling out the administration's new policy toward the peaceful use of nuclear energy and the proliferation of nuclear weapons.

Mr. Ford said that "the reprocessing and recycling of plutonium should not proceed unless there is sound reason to conclude the world community can effectively overcome the associated risks of [weapons] proliferation."

The President further said that reprocessing—the removal of plutonium from used reactor fuel—should no longer be regarded "as a necessary and inevitable step in the nuclear fuel cycle, and that we should pursue reprocessing and recycling in the future only if they are found to be consistent with our international objectives."

The GAO report said that the President's statement on reprocessing "creates doubts as to whether the liquid-metal fast-breeder reactor will become a viable energy source because reprocessing is an indispensable prerequisite for later commercialization."

During the recent election campaign, President-elect Jimmy Carter indicated that his administration's policy in attempting to deal with the proliferation of nuclear weapons will be at least as strict as that proposed by Mr. Ford.

Financial Problems

A second question raised by the GAO report concerned what it called the "financial uncertainties" of building the 128 breeder reactors that the Energy Research and Development Administration is now planning.

The report estimated that the total capital costs for the 128 plants and the required support facilities would be about $150 billion in 1974 dollars. Comparable costs for building the same number and same size of coal-fired generators would be about $95 billion. The cost of the same number and same size of conventional light-water reactors was estimated as about $128 billion.

Despite the higher initial costs, the GAO said the breeder reactor could "retain an economic advantage because it promises comparatively lower operating costs due to its ability to produce more fuel than it consumes."

Nevertheless, the GAO added, the cost of building commercial breeder reactors "may pose a formidable barrier to electric utilities for a number of reasons."

The GAO said: "Bond ratings of electric utilities are declining. Between 1965 and 1974, 21 utilities were upgraded and at least 59 downgraded, in part because the utilities have not been allowed by their regulatory bodies to include all their costs in their rates. Downgrading increases difficulty in attracting investment capital, especially on favorable terms."

Many Agencies

The GAO said that complex conflicts among dozens of institutions concerned with the breeder reactor will also pose difficulties.

At least 33 congressional committees, 65 subcommittees and 29 executive branch agencies share responsibility for the development of the breeder and associated energy policies, the GAO report said. In addition, the utilities, the hardware manufacturers, the regulatory agencies and the public-interest groups must also be persuaded that the breeder reactor can operate safely and economically.

If the existing uncertainties concerning the safety, safeguards and environmental effects are resolved within the next few years, the start of a program to build commercial breeder reactors "by the mid-1980s is feasible," the report said.

Obituaries

Joao Goulart, Brazil Populist, Was Last Civilian President

RIO DE JANEIRO, Dec. 7 (NYT).—Joao Goulart, 58, the last civilian president of Brazil, died yesterday of natural causes at a ranch he owned in northern Argentina, where he had spent the last three years of his 12-year exile.

Mr. Goulart, who was president from 1961 to 1964, was a controversial figure in recent Brazilian history. His leftist populism brought him many admirers among Marxists and others, who viewed his presidency as an opportunity to rally peasants, urban workers, discontented military men and students.

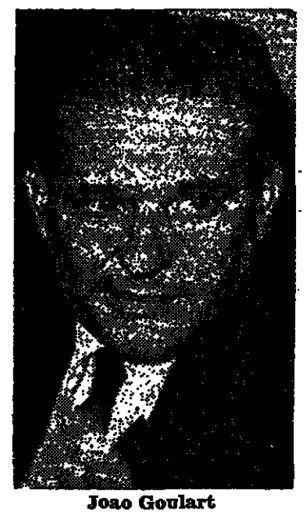
Image Raised

On the other hand, the political and economic chaos of his term in office convinced leaders of the armed forces that a long-term military regime was necessary to stamp out subversion and set the nation on the road of rapid economic growth.

Now, 12 years after its coup, the military constantly raises the image of the disorderly Goulart period as a reminder of the folly of civilian governments.

Mr. Goulart was born in the southernmost Brazilian state of Rio Grande Do Sul, where his parents were affluent ranchers. Like many civilian presidents on the continent, his first taste of politics occurred in the university, where he was a leader of a leftist student movement.

By his early 20s, Mr. Goulart became a disciple of Getulio Vargas, who was president and dictator from 1930 to 1945 and from 1950 until his suicide in 1954.



In 1950 Mr. Goulart rode Mr. Vargas's coattails to win a congressional race. In 1953 he gained national prominence when Mr. Vargas named him minister of labor, industry and commerce.

In 1955, at 37, Mr. Goulart was elected vice-president, and re-elected in 1960.

Mr. Goulart achieved the presidency in 1961 when Janio Quadros suddenly resigned as chief of state without explanation, a few months after his landslide election.

Despite military opposition and an abortive coup attempt, Mr. Goulart was ratified as president by Congress. But military plotting against him continued throughout the next three years.

Segments of public opinion turned against Mr. Goulart as he sought to restructure politics and economics. Rural landowners opposed his agrarian reforms. Businessmen resented his liberal wage increases for labor. And the military hierarchy unified against him when he declined to suppress rebellions by leftist noncommissioned officers.

Joao Goulart

U.S. Airlines Ask Help for Plan on Noise Abatement

WASHINGTON, Dec. 7 (AP).—The nation's airlines urged last week that a 2-per-cent surcharge be added to the price of airline tickets, to provide funds to help reduce airplane noise.

The proposal would not raise ticket prices because the airlines also proposed that the current 8-per-cent federal tax, which funds airport construction, be reduced to 6 per cent.

The proposal was opposed by the President's Council on Wage and Price Stability, which argued that any such approach would be giving the airlines a federal subsidy with which to acquire new equipment or to improve existing equipment.

The testimony was given Wednesday as Transportation Secretary William Coleman jr. held a public hearing on ways to finance the government's aircraft noise-abatement policy.

That policy, announced last month, calls for all airplanes which do not meet federal noise standards—about 1,600, built before the noise standard went into effect in 1969—be fitted with sound-absorbing materials or be phased out.

The Council on Wage and Price Stability told Mr. Coleman that giving the airlines federal assistance in meeting the standards would open the door to other industries asking for similar assistance.

Alexander Novikov

MOSCOW, Dec. 7 (Reuters).—The Soviet Air Force commander during World War II, Chief Marshal Alexander Novikov, 76, has died after a long illness, Red Star has reported.

Sir Michael Fell

LONDON, Dec. 7 (Reuters).—Vice-Adm. Sir Michael Fell, 58, one of the British Navy's most decorated fighter pilots, has died at his home in the south of England.

Heinrich Adrian Loewe

BONN, Dec. 7 (AP).—Heinrich Adrian Loewe, 50, West Germany's second ranking diplomat in Russia, has died in a fall from the eighth story window of his apartment in Moscow.

Ford Holds Talks With Andreotti

WASHINGTON, Dec. 7 (AP).—Italian Premier Giulio Andreotti opened a two-day official visit here yesterday, hoping to assure government and banking leaders of his ability to cope with Italy's economic and political problems.

Mr. Andreotti was welcomed by President Ford at the White House but Italian and U.S. officials said the success of his visit is keyed to meetings with other officials.

Mr. Andreotti, who took office in July, met today with Vice-President-elect Walter Mondale and with Secretary of State-designate Cyrus Vance.

Mr. Andreotti is also seeking a $1-billion loan from the International Monetary Fund and had a meeting scheduled with IMF managing director Johannes Witteveen.

Thousands of spectators, many waving Italian flags, said Mr. Ford welcome Mr. Andreotti.

Ford Praises Him

Mr. Ford praised Mr. Andreotti's "intensity, great courage and determination" in addressing Italy's problems. The two heads of government then met for more than an hour in the Oval Office.

Mr. Mondale made his diplomatic debut in Mr. Carter's behalf by meeting with Mr. Andreotti. Mr. Mondale told reporters he had a "pleasant and useful" discussion with Mr. Andreotti and said the Premier expressed hope for a cooperative relationship with the Carter administration.

The Premier had sought a meeting with the President-elect, but Mr. Carter said that would be inappropriate before the Jan 20 inauguration.

Benjamin Britten Is Buried; A Leading English Composer

From Wire Dispatches

ALDEBURGH, England, Dec. 7. —British composer Benjamin Britten was buried today in a hilltop churchyard overlooking the eastern England fishing village which was his home and inspiration.

Lord Britten, made a lord this year, died Saturday at 63, after several years of heart trouble.

A prolific and versatile composer, Lord Britten's best-known works were his 11 operas, which include "Peter Grimes," "A Midsummer Night's Dream" and "Death in Venice." His monumental "War Requiem," a classical mass, was judged in 1972 "the most significant composition of the past 25 years" in an international survey of 76 music critics and publishers.

His orchestral works include the "Young Person's Guide to the Orchestra" and many song cycles.

A semi-invalid since heart surgery in 1973, when "Death in Venice" was given its world premiere at the Aldeburgh Festival, Lord Britten was working on new compositions until his condition worsened recently.

One of his last compositions, the cantata "Phaedra," was performed last summer at the Aldeburgh Festival, which he founded in 1948.

Wrote Music for Use

NEW YORK (NYT).—Lord Britten carried a double burden through much of his career. Some critics proclaimed him as the greatest English composer since Henry Purcell, while others, especially in his younger days, fastened on his dazzling technical facility to dismiss him as a clever but superficial artist.

Lord Britten himself took a more practical view of his abilities. He best explained himself perhaps when he received the first Aspen Award at Aspen, Colo., in 1964. Accepting a $30,000 prize for "the individual anywhere in the world judged to have made the greatest contribution to the advancement of the humanities," the composer said: "I certainly write music for human beings—directly and deliberately. I do not write for posterity—in any case, the outlook for that is somewhat uncertain. I want my music to be of use to people."

Although he wrote in a style that most listeners might identify as "modern," with large injections of dissonance, Lord Britten never embraced the more controversial musical fashions of his time. A smattering of his works—"Owen Wingrave," "The Turn of the Screw" and "A Midsummer Night's Dream"—contains fleeting passages in which 12-tone rows appear. But on the whole, Lord Britten scorned the avant-garde, especially for what he regarded as its willing isolation from the music-loving public.

He, in turn, was scorned by many avant-gardists as a retrograde traditionalist. He once told an interviewer that the composers he felt most in tune with were Aaron Copland in the United States and Dimitri Shostakovich in the Soviet Union. Like Lord Britten, they have written many works that entered the international repertory and both have been condescended to by some of the avant-garde.

The Aspen Award, one of dozens of honors heaped on the slim, curlyhaired Briton, came in response to his "War Requiem," a 1961 work for chorus and orchestra that struck a sympathetic chord throughout the world. A pacifist and conscientious objector in World War II, Lord Britten chose for his text a mixture of Latin liturgy and the anguished poems of Wilfred Owen, a British soldier who died in World War I. Within a few months of its first performance in May, 1962, "War Requiem" had been performed throughout the world and recorded with Lord Britten conducting.

Ads for Concorde Stopped as False

LONDON, Dec. 7 (Reuters).—British Airways and Air France have withdrawn inaccurate advertisements on the quietness and lack of jet lag for passengers aboard their supersonic airliner, Concorde.

Britain's Advertising Standards Authority has upheld three complaints against Concorde advertisements which claim that "all you notice is the absolute tranquillity of supersonic flight—the quiet." It said that the ad could not be justified.

It also upheld a complaint against an ad which suggested that traveling on Concorde between London and Washington, Paris and Rio de Janeiro, and Paris and New York, gave passengers little or no jet lag.

Israeli Soldier Killed

TEL AVIV, Dec. 7 (AP). — An Israeli soldier was killed and 28 others were wounded yesterday when a hand grenade exploded during a training exercise, the military command announced.

Five Nations Sign Accord Against Rhine Pollution

BONN, Dec. 7 (UPI).—Five European nations have signed three agreements to protect the Rhine's waters against pollution in what they called "a first step in the right direction."

But both the West German Association for the Protection of Rivers and an association of five waterworks said the agreements would fail to purify the river and represented an attempt, by the governments responsible to divert attention from the real problems of pollution.

Ministers from West Germany, France, the Netherlands, Luxembourg and Switzerland signed agreements calling for a reduction in the amounts of chlorides that France dumps into the river from potash mines in Alsace and prohibiting industries channeling certain noxious chemicals into the Rhine. The list of banned chemicals will be drawn up later by the International Rhine Protection Commission.

Under the terms of the third agreement, the European Economic Community will join the Rhine commission

$7 Billion in Lire Returned to Italy

ROME, Dec. 7 (UPI).—Italian banks and exchange offices have reported that Italians repatriated between $7 and $8 billion of illegally exported money after a government offer not to prosecute them.

The offer expired last Friday. Unofficial estimates have placed illegal Italian capital abroad at anything up to $35 billion

UN Re-Elects Waldheim as China Yields

UNITED NATIONS, N.Y., Dec. 7 (Reuters).—Kurt Waldheim today won a second five-year term as secretary-general of the UN despite the initial opposition of China, which favored a candidate from the Third World.

China tried to block the re-election of the 57-year-old Austrian by casting a veto at a closed meeting of the Security Council when it met this afternoon to decide on the appointment.

But only four of the 15 Security Council members, including China, voted for the other official candidate—former Mexican President Luis Echeverria.

On the second round of balloting, China withdrew its veto, and Mr. Waldheim won his second term, receiving 14 votes while there was one abstention.

Mr. Waldheim's first candidacy for the UN post was vetoed by China and Britain in 1971, but they later abstained, permitting his election.

As secretary-general, he has pursued a policy of nonalignment. Delegates at the UN have called the former Austrian foreign minister a consummate diplomat.

The General Assembly is expected to vote unanimously to confirm his reappointment in balloting tomorrow or Thursday. The Assembly has always followed the Security Council's lead in such voting.

On today's first ballot in the Security Council, 13 of the 15 members reportedly voted for Mr. Waldheim, with an abstention said to have been entered by Panama.

In the second round of voting, 14 nations voted for Mr. Waldheim, and there was a single abstention—China.

December, 1976

U.K. Deficit Narrows in Quarter

But Gap Trebles In 1st 9 Months

LONDON, Dec. 7 (AP-DJ).—Britain's overall balance of payments deficit contracted to £848 million in the third quarter from £94 billion in the second quarter, the Treasury said today.

The overall deficit refers to trade, services and capital movements.

For the first nine months, the total payments deficit trebled to £3.414 billion from £1.129 billion in the corresponding 1975 period.

The main reason for the worsening was conversion of official-held sterling balances and other capital outflows.

Official overseas holdings of sterling balances fell by £355 million to about £2.76 billion in the third quarter, the payments figures showed. In the first nine months, the balances have fallen by about £1.35 billion.

Capital outflows in the first nine months, including unrecorded items, totaled a net £2.164 billion compared with net inflows in the year-earlier period of £418 million.

In the same nine-month period, the current-account deficit for transactions in goods and services narrowed to £1.25 billion from £1.541 billion, before seasonal adjustment.

In the third quarter, the current-account deficit before adjustment totaled £508 million compared with a £481-million deficit in the second quarter. However, net capital outflows in the third quarter diminished to £340 million from £1.443 billion in the second quarter, when several oil-producing states reportedly reduced their sterling holdings.

Accord on Balances

Chancellor of the Exchequer Denis Healey said today that he hoped to announce agreement in principle on a solution to the problems of the sterling balances at the same time the government discloses its mini budget of measures to satisfy International Monetary Fund requirements for Britain drawing its remaining credits of nearly $3.9 billion from the fund.

Speaking to the Foreign Press Association in London, Mr. Healey said: "We may be able to announce agreement in principle on the possibility of neutralising the overhang (of sterling balances) at the same time we announce policy measures and the IMF loan agreement next week."

Mr. Healey added that "we hope to stabilize sterling by the measures we are announcing next week."

Deficit Seen Continuing

Meanwhile, a warning that Britain's balance of payments deficit will still be high next year was made in an economic forecast published by Economic Models Ltd. today.

The London-based international economic consultancy organization said that the current account deficit will be £1.5 billion next year, despite improved exports and increased oil production from the North Sea. This year the deficit is estimated at about £1.8 billion.

However, the study said that the trade balance will be healthier by the middle of 1978, despite an expected deterioration in the terms of trade next year.

In another report, the Confederation of British Industry (CBI), the employers' association, said the pace of growth in new orders to manufacturers faltered distinctly last month. And, the CBI said, the value of new export orders showed a sharply lower growth rate.

The CBI reported that its latest monthly trends survey showed that the "balance" of companies reporting an increase in the value of new orders totaled 32 per cent, the lowest level since April, compared with 37 per cent in October.

Particularly disturbing, the CBI said, was the fall-off in new export orders last month. The balance of companies reporting an increase in the value of new export orders fell sharply to only 22 per cent compared with 38 per cent last month. November's rise in export orders is the lowest since January.

The volume of exports has been affected by supply difficulties, and the dip in export volume contributed to Britain's large current-account deficit in the third quarter, the CBI said.

However, the confederation added that the setback is temporary and the trend in export demand has been stronger than domestic demand.

The recovery in economic activity in Britain continued over the last six months, but at a slower rate than had been expected, it said, and the prospect of deflationary measures and declining industrial confidence is likely to further depress domestic demand.

An indication of continuing high inflation came in a report by the Department of Industry yesterday. The index of prices paid by industry for materials and fuel rose to 331.9 last month, up 1.3 per cent from October, when the index was 327.8.

The index of wholesale prices of manufactured goods also rose last month, reaching 233.8, up 1.7 per cent from 229.9 in October. Both indexes are based on 100 in 1970.

West German Payment Gap Is Doubled

FRANKFURT, Dec. 7 (AP-DJ). The West German balance of payments showed a preliminary surplus of 2.043 billion deutsche marks in October, compared with 1.103-billion-DM surplus in September and a 1.069-billion-DM surplus in October, 1975, due to large short-term capital inflows, the Bundesbank reported yesterday.

The payments surplus matched a rise in the Bundesbank's net foreign assets in October of about 2 billion DM.

The current account produced a preliminary surplus of 1.642 billion DM against a revised surplus of 2.378 billion DM for September and a surplus of 10 million DM in October, 1975.

The major source of October's surplus appeared to come from a large surplus in the short-term capital account, a preliminary 1.714 billion DM against a revised deficit for September of 9 million DM and a surplus of 1.287 billion DM in October, 75.

The long-term capital account showed a preliminary deficit of 8 million DM against a revised September deficit of 178 million DM.

Italian Trade Deficit

In Rome, the government reported that Italy posted a balance of trade deficit of 330 billion lire ($381 million) in October, a sharp deterioration from the gap of 194 billion lire posted a year earlier. There was an improvement from September, however, when the deficit was 1 billion lire.

For the first 10 months of the year, there was a deficit of 4.142 billion lire, more than double the gap of 1.572 billion lire posted in the like 1975 period.

The October figures, which are provisional, showed that the gap was entirely due to oil imports. The oil sector showed a deficit of 3 billion lire, while in the non-oil sector there was a surplus of 1 billion lire.

The government also reported that the industrial production index in October stood at 134.7 (1970 equals 100), up 7.1 per cent from the index of 125.8 in October, 1975.

For the first 10 months of the year, industrial output rose 10.3 per cent from the like 1975 period.

Dollar Value Is Increased By Australia

CANBERRA, Dec. 7 (Reuters).—Australia revalued its dollar upward by about 2 per cent today and announced a wide range of tariff cuts, including lifting restrictions on the number of imported cars.

The new economic moves came only nine days after a massive 17.5-per-cent devaluation of the currency.

The revaluation was criticized by the Labor party opposition which said the government was causing economic chaos by its policies.

One of Australia's biggest industry groups, the Associated Chamber of Manufacturers, said it was bewildered and asked Prime Minister Malcolm Fraser for an early explanation of his government's economic strategies.

The revaluation also left stock exchange traders confused and cautious.

In announcing the upward revaluation, the governor of the reserve bank, Harry Knight, said the change would be the first of more frequent and smaller shifts in the dollar's relationship to the currencies of the nation's major trading partners.

The Minister for Business and Consumer Affairs, John Howard, announced in Parliament tariff cuts of between 5 and 10 per cent on about one third of protected goods to prevent any undue price increases from the recent big devaluation.

A Treasury spokesman said the dollar was revalued because the vast outflow of funds, which was one of the prime reasons for devaluation, had begun to flow back into the country.

Opposition sources said they had been told the devaluation had resulted in a considerable inflow of capital, with one figure for this given as $A1 billion in the last nine days.

Private economists and bankers believe the revaluation was designed to accelerate capital inflows. They said it is a signal that profits from recent heavy capital outflows will be steadily eroded by successive revaluations, but declined to estimate up to what point.

One source said it appears the government went too far in devaluing the dollar 17 1/2 per cent in the first place, a view shared by the other sources.

The exchange rate of the Australian dollar was quoted at $1.0362 after the announcement, 2 per cent above the immediate post-devaluation rate of $1.0174.

EC Raises Duty on U.S. Turkeys

BRUSSELS, Dec. 7 (Reuters). The food-and-drink war between the Common Market and the United States escalated yesterday when the EEC raised duties on U.S. turkeys.

In a tit-for-tat gesture following a U.S. decision to increase import taxes on community brandy, the EEC retaliated by imposing considerably higher duties on certain cuts of turkey.

The turkey-cognac dispute broke into the open again 10 days ago when the Americans announced they would raise to $1.25 per gallon from $1.25 their import duty on EEC brandy on July 10.

Most of this is cognac from France and French Foreign Trade Minister André Rossi protested the American move, which was taken because the Community had refused to facilitate poultry imports from the United States.

FINANCIAL NEWS AND NOTES

Bethlehem Spending to Rise 50%

Bethlehem Steel Corp. intends to continue to modernize and expand its facilities despite the current economic uncertainty and expects to increase its capital spending in 1977 by more than 50 per cent over 1976 to about $675 million. Vice-president David Adams says Bethlehem anticipates spending a similar amount in 1978 to complete its previously announced $1.8-billion program. "We believe we have passed the low point of incoming orders. We do not have solid evidence of volume improving in the first quarter of next year over the current quarter, but it shows no sign of being down and looks comparable to the third quarter of this year," he says. Bethlehem expects steel industry volume for 1977 to be up about 10 per cent.

U.S. Car Sales Up 8.4% in November

The pace of U.S. car sales in November rose 8.4 per cent from last year's levels but remained somewhat weaker than auto sales analysts had expected. Part of the gain was due to a sharp 28-per-cent sales surge by imports. Sales of domestic makes, which have shown signs of tapering off recently after gaining strongly earlier this year, rose 5.6 per cent. U.S. car sales for the month totaled about 840,000, up from about 744,000 last year. GM posted the sharpest gain, up 16 per cent. Ford registered an 11-per-cent drop in sales from last year while American Motors' sales were down 24 per cent. The imports sales gain for the month was partly due to comparison with an extremely weak year-ago period. Importers took 14.2 per cent of the market, up from 12 per cent a year ago. The sharpest gainers were import leader Toyota, up 63 per cent, and fast-growing Honda, where sales rose 138 per cent. Volkswagen sales were up 47 per cent.

Leyland to Build New Mini

British Leyland plans to build a new version of its Mini, the small car expected to be the key to the company's future as a volume car manufacturer. Leyland's chief executive, Alex Park, says the government had decided to grant funds for the project—estimated at considerably over £100 million—after taking into account commitments by both Leyland management and workers to significant improvements in productivity. Mr. Park says the new Mini "is a very important project for the long-term prosperity of Leyland cars, and it is vital that the program goes ahead on time." Leyland hopes to introduce the new car in 1979 or 1980. Although profit margins on small cars are usually very small, the government has reportedly been pressing Leyland to bring out a new small size car because of the growing U.K. sales of small foreign cars. Leyland officials admit that at the start of the year they considerably underestimated demand for their cars both at home and abroad. Although the company has subsequently attempted to increase production, output has consistently failed to reach target levels, both because of industrial disputes and low productivity in general.

MAN, VW Sign Truck Accord

Maschinenfabrik Augsburg-Nuernberg (MAN) and Volkswagenwerk have signed a preliminary agreement governing their previously announced intention to cooperate in the development and production of commercial vehicles in the six-to-nine-ton class. The firms have no intention of founding a joint company but will cooperate as independent partners. Discussions on the method of cooperation are expected to last until mid-1977. The two companies aim to sell annually about 15,000 trucks once their planned joint production starts at end 1979.

Warner-Lambert Tenders for Deseret

Warner-Lambert Co. is tendering for any and all of the 2.9 million common shares of Deseret Pharmaceutical Co. at $38 a share. The board of Deseret has approved the tender offer and has recommended that all its stockholders accept it. Deseret makes and markets a line of disposable catheter and surgical infusion sets, and other disposable surgical items. In its latest fiscal year, ended Aug. 31, Deseret had sales of about $40 million and net income of about $5.5 million.

Profit-Taking Depresses Prices on Wall St.

NEW YORK, Dec. 7 (IHT).—Prices turned mixed on the New York Stock Exchange today after trading higher all day. Analysts said the market ran into some profit-taking after the gains of the past two days.

Analysts noted lower interest rates recently have improved stocks as investments relative to bonds.

Analysts also said the broad market continues to outperform blue chips. This represents "some revival of non-institutional buying interest," commented Michael Metz of Oppenheimer & Co.

Deseret Pharmaceutical, among the actives, jumped 6 7/8 to 37 1/4. Warner-Lambert, which said it will tender for all Deseret shares at $38 each, rose 3/4 to 29 1/4.

Occidental Petroleum, also active, tacked on 1/8 to 21. It said its first well in the North Sea piper field is producing oil and output from the field is expected to reach 250,000 barrels a day.

Chemical issues moved higher. Du Pont, which said a Texas polymer plant will come on stream in the 1977 second quarter, edged up 1/4 to 127 1/2. Monsanto rose 3/8 to 80 3/8, Union Carbide 1/2 to 57 3/8 and Allied Chemical 3/8 to 35 1/2.

Citicorp was unchanged at 31 1/2 and Chase Manhattan rose 1/4 to 28 1/8. They offered five-year, 6 1/2 per cent certificates of deposit at par. Bankamerica rose 3/4 to 28 5/8, Chemical 1 to 40 and Bankers Trust 5/8 to 35 5/8.

Mobil was unchanged at 61 1/4. It raised its bid for Irvine Co., topping a competing bid.

MacMillan rose 5/8 to 8 3/4, Hospital Corp. of America 1 1/8 to 26 3/8 and Midland-Ross 7/8 to 27 3/4. They raised their dividends.

Stocks gained on the American Stock Exchange. The Amex index rose 0.45 to 101.42.

Dutch and Danes Set Controls on Price Increases

THE HAGUE, Dec. 7 (Reuters).—The Dutch Economics Ministry announced yesterday temporary price controls allowing companies to pass on only raw-material cost increases and excluding wage and other external costs such as transport.

A ministry spokesman said the new measures are more strict than previous price controls which expired on Dec. 5.

They will remain in force until Economics Minister Ruud Lubbers meets employers and unions in the next few weeks to discuss a final set of price controls for 1977.

Danish Controls

In Copenhagen, the Danish parliament gave final approval to a government bill to freeze rents and prices for three months and to invalidate pay awards gained by unofficial strikes.

The measure will cover the period Dec. 1 to Feb. 28. Wage increases stemming from arbitration or official strike action will be permitted, but employers will not be allowed to pass on the added wage costs to the consumer because of the price freeze.

In another move, Denmark cut its bank rate to 10 from 11 per cent, effective today.

The rate had stood at 11 per cent since Oct. 5 this year, when it was raised from 8 1/2 per cent.

Japan's Exports Rose 41 Per Cent

TOKYO, Dec. 7 (AP-DJ).—Japanese exports certified in November rose 40.6 per cent from the like year-earlier month to total $6.18 billion, with the sharpest increases coming in exports to Western Europe, the Ministry of International Trade and Industry reported.

Seasonally adjusted November exports rose 8.6 per cent from October to total $6.32 billion.

Exports to Western Europe rose 210 per cent from a year earlier to total $793.98 million in the first 20 days of last month, MITI said.

Exports to the United States totaled $1 billion in the first 20 days, up 48 per cent.

Modest Expansion Seen for U.S. Economy

By Ann Crittenden

NEW YORK, Dec. 7 (NYT).—The coming year will see a modest but steady expansion in the nation's economy, with slightly lower rates of both inflation and unemployment, according to a dozen of the nation's leading economists.

The 12 members of the Conference Board's Economic Forum, in their semiannual report on the outlook, were unanimous in not predicting a renewal of recession next year, despite an apparent uncertainty among many consumers and businessmen.

"Our views of the actual short-term economic outlook for the United States are comfortable, if not enthusiastic," said Albert Sommers, chief economist of the Conference Board and chairman of the forum. He added, however, that there are many factors in the domestic and international economic environment that "are genuine causes of concern," such as the re-emergence of business stagnation and the persistence of inflation around the world.

What the private economists believe will happen next year falls far short of what President-elect Jimmy Carter has set as his goals. Their report forecasts real growth of 4.9 per cent in 1977, compared with 5.9 per cent on an annual basis in October; an average unemployment rate of 7.1 per cent, versus an estimated rate of 7.6 per cent this year, and a 5.6-per-cent increase in the consumer price index, against 5.8 per cent in 1976.

In contrast, a little more than a week ago, Mr. Carter declared that he intended to produce a 6-per-cent rate of growth in the economy and a lowering of the unemployment rate to about 6.4 per cent during his first year in office.

To accomplish these goals, Mr. Carter is considering a substantial tax reduction to be enacted early next year and various job-creating programs in housing and other areas.

The economists appeared to agree that "some further fiscal stimulus may well be in order in early 1977," as Mr. Sommers, a Carter adviser, put it. Among the measures approvingly cited by the forum were a $15-billion tax rebate on 1976 personal income taxes, accompanied by some increase in public employment spending, an enlarged program of rent subsidies, to stimulate multifamily housing, a reduction in social security taxes, and a liberalization of depreciation allowances.

The group specifically rejected the notion of an independently stimulative monetary policy. They also attacked proposals for an incomes policy.

U.S. Firms' Investment Won't Rise in 1st Half

By Edwin L. Dale Jr.

WASHINGTON, Dec. 7 (NYT).—Business plans no increase in real terms in investment in plant and equipment in the first half of next year over the final half of 1976, the Commerce Department reported yesterday.

The report may well provide the clinching evidence to the incoming Carter administration that the economy needs a boost in the form of fiscal stimulus, chiefly through a tax cut. Some of the President-elect's advisers had urged that he wait for this plant and equipment survey before making up his mind, and the report now proves to be anything but bullish.

Business investment is only one important element in total demand in the economy, but it is one whose variations can generally affect the course of economic activity. The report provides a strong signal that there will be no thrust from this sector in the first part of next year, at least.

Meanwhile, the Federal Reserve Board reported that consumer debt rose by $1.56 billion in October, the biggest increase in three years.

The report on business investment plans said that, in dollar terms, business plans a modest increase in the first two quarters of 1977. But it added that, allowing for an inflation rate of about 4 per cent in the capital goods sector, "the first half of 1977 would show virtually no change from the second half of 1976."

For 1976 as a whole, with actual investment figures in hand for the first three quarters, spending on plant and equipment is estimated to be 7.5 per cent higher than in 1975, an increase of only about 3 per cent in real terms.

In dollar terms, investment by manufacturing industry this year will be up 10.5 per cent and in non-manufacturing by 5.3 per cent. A big drop in investment by the airline industry in 1976 held down the non-manufacturing sector.

Investment for all of 1976 is now estimated at $121.23 billion. Spending in the fourth quarter is put at an annual rate of $127.87 billion, up 4.3 per cent from the third quarter and a little more than was planned by businessmen in the previous survey reported in September.

After this spurt in the fourth quarter, the increase in planned investment will taper off to 1.2 per cent in the first quarter of next year and 1.5 per cent in the second quarter, the report said. Second-quarter investment is planned by business at an annual rate of $131.28 billion.

Actual spending on plant and equipment in the third quarter, at an annual rate of $122.55 billion, was up 3.7 per cent from the second quarter but was a little below the level projected by business in the September survey.

Soviet Trade Gap With West Grows To $3.36 Billion

MOSCOW, Dec. 7 (AP-DJ).—The Soviet Union's trade deficit with the capitalist countries climbed to the equivalent of $3.36 billion at the end of the third quarter, according to official statistics released today.

The trade imbalance thus grew by about $410 million since the middle of the year, according to the monthly magazine Foreign Trade.

The figures show that imports fsom the industrialized West are running about 43 per cent higher than exports to these countries.

West Germany remained this country's largest capitalist trading partner with $2.99 billion in business for the third quarter. The United States was second with $2.39 billion, followed by Japan with $1.91 billion, Finland with $1.85 billion and France with $1.79 billion.

Russia's deficit with the United States totaled $1.97 billion—due to extensive imports of grain and some large orders for heavy machinery this year. The deficit with West Germany was a more moderate $870 million.

W. German Jobless Up

NUREMBERG, West Germany, Dec. 7 (Reuters).—The number of unemployed in West Germany rose to 984,700 at the end of last month, compared with 943,700 in October, the Federal Labor Office reported.

This announcement appears as a matter of record only.

(Continued on next page.)

Now is the time to buy in Germany's bond market

The opportunities offered by the German bond market should be grasped now because the signs are good for a further fall in interest rates and for capital gains.

Of course, an investment in bonds, as with any other securities, demands constant attention. Much more, perhaps, than the average investor is able to give. Bonds and mortgage bonds must be carefully selected to achieve a satisfactory spread of investment and the mix adjusted to meet changing market conditions. This is the kind of management that Deutscher Investment-Trust offers you.

through INTERNATIONALER RENTENFONDS

Mutual Fund

INTERNATIONALER RENTENFONDS is one of eight Mutual Funds under the management of Deutscher Investment-Trust, Frankfurt a.M. It is widely invested in the DM-bond market, currently to the extent of more than 70%. Being based on one of the world's strong currencies, it gives excellent performance prospects. The keynote of the investment policy is flexibility to meet fluctuations on the capital market and interest rates.

The Management

Deutscher Investment-Trust has 20 years' experience and nearly 4,000 million DM under management for more than 300,000 investors. Depositary Bank is Dresdner Bank AG, Frankfurt a.M., West Germany.

Performance

Between inception in February 1969 and November 1976 there has been 54.6% growth in the Fund, including all distributions. Foreign investors have fared even better because of the continuing strength of the DM — as follows:–

US $ investors	157.8%
£ Sterling investors	285.6%
FF investors	160.4%

Regular Income

INTERNATIONALER RENTENFONDS makes a yearly distribution, which in 1976 amounted to DM6.80 per Unit.

Charges

Loading: 3%. Management: 0.1% quarterly. Depositary Bank (additional to usual safe custody fee): 0.01% quarterly.

Make the most of the advantageous conditions in the German bond market. Complete this application form without delay.

Purchase of Units in West Germany

Units of the Fund may be purchased at any time. Redemption is also assured at any time by German Law. They are obtainable, in bearer form, from Deutscher Investment-Trust or from the depositary bank Dresdner Bank AG, as well as from Bank für Handel und Industrie AG, Bayerische Hypotheken- und Wechsel-Bank and Westfalenbank AG. The current offering price is approximately DM 72.

To: **Deutscher Investment-Trust, Postfach 2685, D-6000 Frankfurt a.M.1**

* Please delete whichever is inapplicable.

* **Investment Account** I wish to open an INTERNATIONALER RENTENFONDS investment account with regular reinvestment of distributions. Please send me the necessary documents.

* **Information** Please send me, without obligation, free literature on INTERNATIONALER RENTENFONDS and the investment account.

FRESH APPROACH

Did your investment manager fail because he did not recognize changing times? The 70s are the time for DIRECT OWNERSHIP. We will manage your estate through a Swiss account, or directly. We recommend:

1. Bonds with direct claim on assets.
2. Stocks run for benefit of OWNERS rather than management.
3. Ranch land in U.S.A. with no labor problems.
4. New techniques in options.

10% ANNIVERSARY ACCOUNT
At demand
Interest rate guaranteed for 10 years

Everyone can open an Anniversary Account
Finansbanken is Denmark's leading bank in foreign deposits. For more than ten years, depositors from all over the world have taken advantage of the high interest level in Denmark and the favorable investment opportunities Finansbanken offers. Finansbanken is subject to the strict Danish Banking Laws. The Anniversary Account is an easy, problem-free way of placing funds.

What are the advantages of the Anniversary Account?
- 10 % interest annually
- interest rate guaranted for 10 years
- withdrawals at demand.

Deposits and withdrawals can be made at any time. Capital and interest on foreign depositor's accounts are not subject to taxation in Denmark.
The Anniversary account is held in fully convertible Danish kroner. The Danish currency is a member of the joint European float — the »snake«.

Information about the bank
Total assets more than 1.8 billion kroner
Share capital, paid up 80 million kroner
Reserves 71 million kroner
Liability-capital deposits .... 100 million kroner
Liability-capital, total 251 million kroner
Number of shareholders .... more than 30.000
Number of branches 43

How to open an Anniversary Account
With the coupon below, you can ask for an application form and further information covering the Anniversary Account and other attractive investment offers from Finansbanken. Upon receipt of your application form and first deposit we shall send you our receipt and confirmation for the new account.

Send this coupon to Finansbanken to-day

Sales figures are unofficial.

Unless otherwise noted, rates of dividends in the foregoing table are annual disbursements based on the last quarterly or semi-annual declaration. Special or extra dividends or payments not designated as regular are identified in the following footnotes.

a—Also extra or extras. b—Annual rate plus stock dividend. c—Liquidating dividend. e—Declared or paid in preceding 12 months. f—Declared or paid after stock dividend or split up. i—Paid this year, dividend omitted, deferred or no action taken at last dividend meeting. k—Declared or paid this year, an accumulative issue with dividends in arrears. n—New issue. r—Declared or paid in preceding 12 months plus stock dividend. t—Paid in stock in preceding 12 months, estimated cash value on ex-dividend or ex-distribution date.

x—Ex-dividend or ex-rights. y—Ex-dividend and sales in full. z—Sales in full.

cld—Called. wd—When distributed. wi—When issued. ww—With warrants. xw—Without warrants. xdis—Ex-distribution.

vi—In bankruptcy or receivership or being reorganized under the Bankruptcy Act, or securities assumed by such companies.

Year's high and low range does not include changes in latest day's trading.

Where a split or stock dividend amounting to 25 per cent or more has been paid the year's high-low range and dividend are shown for the new stock only.

MATSUSHITA ELECTRIC INDUSTRIAL CO, LTD
(CDRs)

The undersigned announces that the Third Quarter Report ended August 20, 1976, of Matsushita Electric Industrial Co., Ltd., will be available in Amsterdam at Pierson, Heldring & Pierson N.V. and further at: Algemene Bank Nederland N.V., Amsterdam-Rotterdam Bank N.V., Bank Mees & Hope N.V., Kas-Associatie N.V.

AMSTERDAM DEPOSITARY COMPANY N.V.

Amsterdam, November 30, 1976.

MARITIME FRUIT CARRIERS COMPANY LIMITED

Distribution of funds in respect of Floating Rate Notes 1982

Notice to Holders of Secured Floating Rate Notes 1982 ("Notes") issued by Maritimecor, S.A. ("Maritimecor") and guaranteed by Maritime Fruit Carriers Company Limited ("MFC").

Bankers Trust Company (the "Paying Agent") as paying agent under the Paying Agency Agreement dated as of August 31, 1972, among Maritimecor, MFC, as Guarantor, and the Paying Agent, hereby gives notice to each holder of the Notes that the Secured Obligations (as defined in the Trust Agreement dated as of August 31, 1972 among MFC, Maritimecor and Manufacturers and Traders Trust Company, as Trustee) were declared by the Trustee on June 3, 1976 to be immediately due and payable in accordance with the provisions of said Trust Agreement. In accordance with Section 5.02 of the Trust Agreement, Manufacturers and Traders Trust Company (the "Trustee") has distributed to the Paying Agent and Bankers Trust International Limited, as Agent Bank and Warrant Agent, an aggregate of $20,000,000 which is to be distributed on a pro rata basis by the Paying Agent, the Agent Bank and the Warrant Agent to the respective holders of the Secured Obligations including holders of the Notes.

In order to receive a payment in respect of interest and principal on his Note, the holder of any Note should present his Note or Notes with all coupons attached to the London office of Bankers Trust Company, 9 Queen Victoria Street, London EC4P 4DB, England along with instructions as to where and to whom payment should be made. Should any Noteholder have questions or need assistance in presenting his Notes in London he should contact either the Paying Agent or any of the sub-paying agents listed below. Each holder presenting a Note will be encouraged to leave his Notes with the London office of the Paying Agent, as custodian, until such time as the Trustee has made a final distribution of the proceeds of the collateral securing the Notes. Upon presentation of any Note the Paying Agent will stamp such Note indicating the amount of principal and interest that has been paid in respect of such Note and will pay by check or telegraphic transfer the following amounts of principal and interest with respect to each $1,000 principal amount of Notes presented:

Principal: $580.65 per $1,000 face amount
Interest: $33.80 per $1,000 face amount
N.B. Individual holders should present their bonds through a bank.

Stabler's Passing Buries Cincinnati

From Wire Dispatches

SAN FRANCISCO, Dec. 7.—Ken Stabler, the National Football League's leading touchdown passer, ran his season total to 27 with four scoring strikes last night while leading the Oakland Raiders to a 35-20 victory over Cincinnati and all but eliminating the Bengals from the race for an AFC playoff berth.

The left-handed quarterback threw twice to tight end Dave Casper for first-half touchdowns and a 21-13 lead, and then put the game away in the second half with scoring throws to Cliff Branch and Fred Biletnikoff.

The victory gave the Raiders a 12-1 record, the best in the NFL, and clinched the home-field advantage in the playoff. The Bengals suffered their fourth loss compared to nine victories and fell into a three-way tie for first with Pittsburgh and Cleveland in the AFC Central.

The two-time defending Super Bowl champion Steelers thus can wrap up the division title and the playoff spot by beating Houston next Sunday no matter what the Bengals and Browns do.

Playoff Berths

At Foxboro, Mass., quarterback Steve Grogan ran for two touchdowns and passed for two more Sunday as the Patriots clinched their first playoff berth with a 27-6 triumph over the New Orleans Saints.

New England's fifth consecutive victory and its seventh in eight games gave the team a 10-3 record and tied it with Baltimore for first place in the American Conference's East Division.

Dallas clinched its eighth division championship in 11 years, defeating Philadelphia, 27-6, to claim the top spot in the NFC's Eastern Division.

In other Sunday games involving teams still seeking a spot in the playoffs, Pittsburgh kept its hopes for a third consecutive Super Bowl championship alive by routing Tampa Bay, 42-0, for its eighth consecutive triumph; Washington ran over the New York Jets, 37-16, to tie St. Louis for second in the NFC East; Cleveland protected its slim hopes by edging Houston, 13-10.

Minnesota, the Central Division champion, brought its record to 10-2-1 by defeating Green Bay, 20-9.

On Saturday, the Los Angeles Rams captured their fourth consecutive NFC West title by bombing Atlanta, 59-0, and Baltimore's bid for a title was slowed with a 24-17 loss to St. Louis.

In games meaning nothing more than personal pride and position in the college draft—if one is held—the New York Giants topped Detroit, 24-10, Miami beat Buffalo, 45-27, Chicago defeated Seattle, 34-7, Denver beat Kansas City, 17-16, and San Diego recorded a 13-7 overtime decision over San Francisco.

Lions' Herman Weaver's punt is blocked by Giants' Brian Kelley and Ralph Hill Sunday.

U.S. Medical Gains From Soviet Exchange

By David K. Shipler

MOSCOW (NYT).—The United States has gained a great deal from a program of joint Soviet-U.S. medical research since the exchange of medical data, drugs and technology began in 1972, according to some of the U.S. scientists involved.

Last year the research produced 83 jointly published scientific papers. Next year a joint book is due on cardiovascular surgery by Dr. Boris Petrovsky, the Soviet minister of health, and Dr. Michael DeBakey, president of the Baylor College of Medicine in Houston.

One hundred Soviet scientists and 100 U.S. scientists are working in each other's countries annually, concentrating on six basic areas—cancer, heart disease, environmental health, arthritis, influenza and the underlying biology of schizophrenia.

For U.S. researchers, much of the advantage derives from their new access to the large data of Soviet society—in which the patterns of disease within a population of 256 million can be analyzed—and from their exposure to the results of medical procedures that are not often used in the United States.

When Dr. Theodore Cooper, assistant secretary of health, education and welfare, visited Moscow several weeks ago with a scientific delegation to renew the joint research agreement, he said that he thought U.S. medical knowledge was gaining from contact with the Soviet Union in the fields of heart disease, heart surgery, artificial hearts, cancer and arthritis.

On the subject of heart disease, Dr. Cooper noted that scientists had discovered, in examining a sample of 30,000 people, 6,000 of them in Leningrad and Moscow and 24,000 in a dozen U.S. cities, that Soviet citizens without arteriosclerosis often had high levels of fatty proteins, known as high-density lipoproteins, in their bloodstreams.

No causal relationship has yet been found, but even the discovery of the inverse correlations, Dr. Cooper said, would not have been possible in a purely U.S. sample, because with the U.S. group no significant variation in lipoprotein levels existed. Nobody had the high amounts found among the disease-free Soviet citizens, he noted.

On the question of heart surgery, Dr. Cooper pointed out that Soviet doctors usually use medical means, including drugs, rather than surgery to deal with coronary artery problems, while in the United States surgery is preferred because of the uncertain results of drugs. Some 50,000 coronary-bypass operations are done annually in the United States at a cost of about $20,000 a case, Dr. Cooper said.

"To test the differences between the conservative (drug) treatment and surgery would be very difficult, ethically or technically," he explained.

Now U.S. scientists are following the progress of hundreds of Soviet heart patients under drug treatment to see whether drugs that dilate arteries, for example, might be safe alternatives to surgery.

On artificial hearts, U.S. technology was a decade ahead of the Soviet Union's in developing them, but, he went on, Soviet scientists have made some improvements in the U.S. designs, partly through developing mathematical models and mechanical innovations that address the problem of fluctuating blood pressure.

Soviet-U.S. teams have built and implanted mechanical hearts that can keep calves alive for up to three days, but scientists stress that they have a long way to go before a workable man-made heart is available for humans.

On cancer, Dr. Cooper said that he believed that U.S. access to detailed Soviet data on its racial and geographic incidence might help researchers analyze the environmental and genetic factors in the disease. Both sides have also exchanged about 150 chemical agents used in chemotherapy.

"They have developed some products here that are very promising," Dr. Cooper said, "that are in clinical trial, that we were able to get directly."

Joint research is also under way on possible links between certain viruses and cancer, and the Soviet Union has given the United States some virus strains to be tested.

The death rate from cancer in 1975 was 134.6 per 100,000 population in the Soviet Union and an estimated 174.4 in the United States.

In all these efforts, Dr. Cooper said that he thought one of the major achievements had been the standardization of research methods, always a prerequisite to the actual investigations.

The one area where agreements on methodology and definitions have remained elusive, and where political problems hover in the background, is in the attempt to learn whether schizophrenia has biological causes. Dr. Bertram Brown, director of the National Institute of Mental Health, explained that the Soviet Union had found in patients they diagnosed as schizophrenics a certain abnormal hormone pattern in the blood that tends to break down lymphocytes. So far, he said, U.S. researchers have not been able to duplicate the Soviet findings.

Because of what one U.S. scientist termed the Soviet "abuse of psychiatry" for political purposes—that is, the incarceration of dissidents in mental hospitals and the administering of physically and mentally harmful drugs—this aspect of the exchange is under constant attack by Western scientists who are afraid that the joint program gives Soviet psychiatry a cloak of legitimacy. Under the agreement, each side finances its own scientists. Dr. Cooper reported that over the past four and a half years the program has cost the United States government about $4 million. Within a couple of years it will be costing about $1.5 million annually, he estimated.

Money Returns Skiers to Circuit

By Bernard Kirsch

VAL D'ISERE, France, Dec. 7 (IHT).—The skiers say they can't afford to quit the World Cup circuit, except for maybe a couple of million dollars, and all the world's best will be here tomorrow when the season's action begins. Only Rosi Mittermaier, the West German who has signed a $2-million contract with a U.S. sports entrepreneur, will be missing.

But Mittermaier, who last season won two Olympic gold medals and the World Cup title, will have her place as queen grabbed by Annemarie Proell-Moser, the Austrian who retired last year after winning five straight titles. She is as gung-ho as ever, as loose as can be.

She has given an assortment of reasons for the return—boredom, the competitive urge. She does not mention that this is the anti-climatic year after the Olympics, the pressure is off; nor does she talk to strangers about money. The 23-year-old need not bother to keep it a secret because the under-the-table ski age is passé.

New License

Skiing's ruling body, the Federation Internationale de Ski, always has been lenient in allowing its skiers to set aside a pile to buy a chalet, or whatever. This year the FIS did not say no when the Swiss proposed the B license, which cures all paranoia about being disqualified for not being an amateur. The B license permits the skier, instead of the national ski federation, to sign contracts with commercial firms. In return, the skier pays his federation 30,000 Swiss francs ($2,000) for the honor of being a team member Swiss Bernhard Russi. Olympic silver medalist this year, has taken advantage of the deal. The only catch is that the B license does not permit competition in the Olympics.

Back again among the rich are Italian Gustavo Thoeni, four-time World Cup titlist and 1972 Olympic gold medalist, and his countryman iPero Gros, 1974-75 World Cup victor and 1976 Olympic gold winner. Still here is Franz Klammer, the Austrian who won gold in the Innsbruck downhill, and Swede Ingemar Stenmark, the defending World Cup titlist.

'Way of Life'

"You must remember that skiing with the European men on the circuit is their way of life," said Italian team director Mario Cotelli. "It is their business. The only exception to all this are the Americans. There, spirit is different; it is still a sport with them."

Still, the Americans have squeeked out their biggest ski burget ever, $1.3 million, and have put together a strong squad, having retained the top skiers and building toward the big show at home, the 1980 Olympics at Lake Placid, N.Y. There are 11 U.S. men and 8 women in town, with Cindy Nelson, bronze medalist in the Olympic downhill, set to go in both women's races here, the downhill tomorrow and the giant slalom Friday.

PEOPLE: *Another Honeymoon For Liz Taylor*

Actress **Elizabeth Taylor** and her seventh (counting **Richard Burton** twice) husband, former U.S. Navy Secretary John Warner, arrived in Israel Tuesday on the first leg of their honeymoon. They were married Saturday at Warners' farm in Middleburg, Va., in an Episcopal service. Miss Taylor will be guest of honor at a fund-raising dinner in Tel Aviv. Warner, who is chairman of the American Revolution Bicentennial Commission, will dedicate a Bicentennial forest near Jerusalem Wednesday.

* * *

Uganda's President Idi Amin has, according to Uganda Radio, been asked by 175 Hawaiians to become their king and lead a fight for the islands' independence from the United States. Amin is seriously studying the request, according to the report, and will bring it up with U.S. authorities and Third World leaders. Meanwhile in Honolulu, leaders of five Hawaiian native-rights groups have discounted the Uganda Radio reports. Spokesmen for four of the groups said they weren't looking for independence providing there was redress for violations of land rights. **Peggy Ross**, leader of the more militant Ohana O Hawaii, said she did not write to Amin but believes he could have gotten ideas about Hawaiian independence on his own after reading a letter sent to the UN Security Council in 1973. "We declared war against the United States when President **Richard M. Nixon** was in office," she said, "and proclaimed our sovereignty and independence. The Security Council wrote back saying we were not a nation and so they couldn't help us."

* * *

Melina MacLean, the Chicago-born wife of **Donald MacLean**, the former British Foreign Office official who defected to the Soviet Union in 1951, is in the United States visiting her family. Now a Soviet citizen, Mrs. MacLean—who after moving to Moscow left her husband for double agent **Kim Philby**, later returning to MacLean—talked to a London Daily Express reporter in New York over the weekend. Mrs. MacLean, now 60, has no plans to leave the Soviet Union permanently but her tourist's visa to the United States has been extended until February. She arrived there this summer. "I love America," she said. "After all, it is my home. Of course, one thinks about the possibility of coming back. But it is impossible to talk about the future. In my life, I have learned that there is no point in planning for the future." She added that she was "just delighted" to be near her mother, **Medlinda Dunbar**, 85, and her two sisters, **Harriet** and **Catherine**.

* * *

Soviet gymnast Olga Korbut is apparently going to get married. But she's not saying to whom. She bought a wedding dress ($177) the other day in J.C. Penney's in St. Louis, where she and other Soviet gymnasts were performing. Miss Korbut, 21, gold medalist in the 1972 Olympics, told reporters that she was marrying "a boy."

* * *

"I don't mind women getting jobs and equal rights," declared **Emerson Kellogg 3d** the other day, "but they're going too far when they try to cut out boys' activities." Kellogg, 12, is a former member of the all-boy choir of Wethersfield Elementary School in Wethersfield, Conn. The choir was dispersed in line with U.S. government guidelines on sex discrimination. "Women's liberation? I think it stinks," young Kellogg said, adding that he didn't like girls. "If they want to be equal let the girls have their own choir and the boys their own choir." He had support from an adult, **Vaughan Howland**, director of elementary and secondary education in the town. "I think the law is rather ridiculous," Howland said. "Choirs for strictly boys have existed for decades. The interpretation of the law by the Department of Health, Education and Welfare is carrying it to the absurd."

* * *

A judge in Morris County, N.J., is still balking at giving a license to keep a submachine gun to **William Simon**, outgoing Secretary of the Treasury. Simon, who will return to his Harding Township home when he leaves the Ford administration in January, first asked for the permit in August. County Judge Charles Egan Jr. asked Simon to send him a letter explaining his need to keep the gun, and now Judge Egan has in hand Simon's letter describing his operable .45-caliber Thompson submachine gun as a "curio" and part of a gun collection. But Judge Egan said Tuesday that wasn't enough and needed "specific reasons, detail," before he could issue permit.

* * *

Jack Gee Jr., son of the blues singer **Bessie Smith**, filed suit in a federal court in Philadelphia, alleging that C[illegible] Inc. and Columbia Records Inc. deprived Miss Smith of reasonable fees because she was bl[illegible]. The suit contends that the defendants and predecessor c[illegible] panies never paid Miss Sm[illegible] who died in 1937, more than [illegible] for any of the songs she record[illegible] from 1923 to 1933. The suit m[illegible] tains that in a recent annual [illegible] port, Columbia said that reis[illegible] of Miss Smith's records w[illegible] among the largest-selling reis[illegible] in industry history, having [illegible] sales of more than $6 mil[illegible] Gee did not say how much [illegible] he thinks he should get.

Associated Press.

A ROYAL WEDDING—Prince Bertil of Sweden, 64, marr[illegible] his companion of 33 years, Lilian Craig, 60, Tuesday [illegible] the Drottningholm Palace chapel near Stockholm. Am[illegible] the guests was the man who made the marriage p[illegible] King Carl Gustaf. Bertil's father, Gustaf VI Ado[illegible] not approved of the romance between his son an[illegible] Craig, a divorced English commoner. When B[illegible] brother, father of the present king, was killed in a pl[illegible] crash, Gustaf VI Adolf asked his son to act as regent [illegible] his nephew and not to marry before the nephew did. C[illegible] Gustaf married Silvia Sommerlath last summer.

Red Sox Reacquire Carbo, Scott in Trade

In Baseball Activity

LOS ANGELES, Dec. 7 (UPI).—The Boston Red Sox, seeking to keep pace with the vastly improved New York Yankees, acquired a pair of their former players—George Scott and Bernie Carbo—from Milwaukee for first baseman Cecil Cooper yesterday while the Cleveland Indians also reobtained veteran designated-hitter Rico Carty from the expansion Toronto Blue Jays.

The Red Sox and the Indians, obviously concerned over the Yankees' acquisition of free agents Reggie Jackson and Don Gullett, sought to strengthen their attacks with the trades. But it was actually the Brewers who were the busiest at the opening day of the annual winter meetings, making three separate transactions involving nine players.

Before the Carbo-Scott-for-Cooper deal, the Brewers sent catcher Darrell Porter and pitcher Jim Colborn to the Kansas City Royals for outfielder Jim Wohlford, third baseman Jamie Quirk and a player to be named later. And in a minor transaction, the Brewers picked up catcher Larry Haney from the Oakland A's on waivers.

In obtaining Scott, who hit .274 with 18 homers and 77 runs batted in for the Brewers last season, the Red Sox had to outbid at least a half dozen clubs who wanted the slugging first baseman once the Brewers let it be known that he was available.

The acquisition of Carbo, meanwhile, marked the return of a World Series hero to Boston. The 29-year-old outfielder is best remembered for his game-tying three-run homer in the sixth game of the 1975 classic.

Cooper, 26, hit .282 with 15 homers and 78 RBI for the Red Sox last season.

In a separate deal, the Red Sox also sold infielder Bob Heise to the Royals.

To get Carty, who hit .310 with 13 homers and 83 RBI last season, the Indians sent 22-year-old catcher Rick Cerone and utilityman John Lowenstein to the Blue Jays.

Colborn, a 30-year-right-hander who won 20 games in 1973, was 9-15 with a 3.71 earned-run average for Milwaukee last year while the 25-year-old Wohlford batted .249 and stole 22 bases in 107 games.

PARIS OPERA: *A Modish, Magistral 'Rheingold'*

By David Stevens

PARIS, Dec. 7 (IHT).—On schedule, and just under the wire to qualify as a centennial-year celebration, the Paris Opéra began its tensely awaited production of Wagner's "Ring" tetralogy last night with "Das Rheingold," modishly staged by a young team of Berliners and magistrally conducted by Sir Georg Solti.

By a piquant twist of theatrical politics, the Paris "Ring" is being staged by Peter Stein and his team of the Schaubühne am Halleschen Ufer, who originally were scheduled to do the centennial production in Bayreuth until a falling out led Wolfgang Wagner to turn to the even younger French team of Patrice Chereau & Co. Rolf Liebermann daringly snapped up Stein & Co. for his Paris "Ring," speculating on the stage while buying gilt-edged stock in the orchestra pit with Solti, arguably the premier Wagnerian conductor of the day.

The result in Paris was remarkably similar in its general lines to the production that caused such an uproar in Bayreuth last summer, and just as startling in its departure from tradition as many recent productions in recent years in Germany, Milan, London and elsewhere. There was the same penchant for taking Wagner's stage instructions literally where they have customarily been ignored, and vice versa; the same vague updating to the late 19th century; the same Brechtian impulse to let all the theatrical tricks hang out, like a magician revealing his secrets; the same drive to a busy, active staging instead of a static one, and spiced with the same dose of social commentary.

In Armchairs

Thus, the staging of the first scene often involves three dancers, three singers and all the wiles of modern stage machinery to give the impression of the three Rhine maidens swimming and singing in the depths of the river. Here, the singing trio lounged in overstuffed armchairs at the river bottom while three mobile counterparts zoomed up and down on ropes, and Alberich sped up a ladder mounted on a huge block of rock to seize the gold, which turned out to be an amber spotlight.

In the transition to the second scene, the rock sank below the stage, the curtains that simulated the river did likewise, and the rest of the opera was played on the naked stage. An avalanche of autumn leaves poured onto the stage, burying the sleeping Wotan and Fricka, while the iron partition at the back of the stage, partly opened, revealed Valhalla as represented by the ornate, chandeliered Foyer de la Danse.

Wotan, in more-or-less modern evening dress, fairly oozed bourgeois pride in his newly built palace and bourgeois avarice in trying to avoid paying for it, and Fricka might have been any well-dressed socialite in the audience, except for the whip with which to drive her ram-drawn chariot. Yet Moidele Bickel's costumes followed tradition faithfully for the grotesque dwarfs Alberich and Mime. Erda wandered in and delivered her warning like Madame Récamier presiding at a salon.

Fafner and Fasolt were, rather touchingly, human-sized representatives of the working class, their status as giants being represented by the principal element in Karl-Ernst Herrmann's set—an immense hand that shielded their entrances and exits, and a huge, half-buried head. A sleeping giant, perhaps the as-yet-unawakened working class that shed bloody tears when Fafner smashed his comrade to death against its head.

Delight of Children

With the delight of children in magic theater, Stein and Herrmann used traps and steam curtains to pull off Wagner's tricks. Alberich transformed himself into an improbably immense serpent, then into a comic little bright green toad. When it was time for the gods to enter Valhalla, there was no simulated march over a projected rainbow, but a real procession over an immense arched bridge that descended from the flies and was attached to the entrance by two visible stage-hands. The banging and clatter of stage machinery was constantly audible, but since it is endemic at the Paris Opéra, it is hard to tell if that too was intended.

When "Die Walküre" arrives in a couple of weeks, and the rest of the "Ring" next year, it will be easier to tell where this fascination of effects is going. But where it is headed there will be splendid singing and acting. Adam's Wotan was superb in voice and in his projection of pride and power. Christa Ludwig was all rich-voiced seductiveness as Fricka and Helga. Hesch in radiant voice as giving Freia. Robert Tear, in silver evening clothes and a lined wolf's fur, was tellingly lyric as Loge. Herbert Steinbeck's clarion-toned Froh, and Jos Vento physically imposing as Donner, but without the resonant top notes.

Kurt Moll and Donald Sinden were the sonorous Fasolt and Fafner, Franz Mazura and Heinz Pampuch idiomatically acerbic as Alberich and Mime—although Mazura rose to impressive [illegible] in the curse while Birgit Nilsson did not have the bottom notes to carry Erda's authority. The three outstanding Rhine maidens aided by being able to concentrate on the conductor—Christiane Eda-Pierre, Jane Berbié and Anna Ringart.

Under Solti, the music unfolded with the tension, restraint, power and vibrant delicacy that marks his approach to this music. The "Ring" has not figured heavily in Paris operatic history, but it has always been under the best musical auspices—Weingartner, Richard Strauss, Hans Knappertsbusch. Solti upheld this tradition last night, and few singers aside, so did the orchestra.

U.S. Helped Ship Overseas Pesticides Banned at Home

By Peter Milius and Dan Morgan

WASHINGTON, Dec. 8 (WP).—The U.S. government has helped to pay for the shipment overseas of hundreds of tons of pesticides so poisonous that they are not permitted to be used in the United States.

Included in these shipments of the U.S. foreign program were 64 metric tons of leptophos, which has been linked to nerve disorders and paralysis among workers at the Texas plant where it was manufactured.

Officials of the Agency for International Development (AID) said the leptophos pesticide was shipped to Indonesia and South Vietnam between 1972 and 1975 for use on cotton crops.

At the same time, the officials said that AID had subsidized the export of about 900 metric tons of DDT, primarily for use on crops, between 1972 and 1974. The use of DDT has been prohibited in the United States, except in special cases, since the beginning of 1973.

AID agreed last December to suspend its procurement of these and other controversial chemicals after four national environmental organizations filed suit to stop the practice.

Until then, leptophos, DDT, aldrin, heptachlor and chlordane were all included on the list of commodities for which U.S. government financing was available to foreign buyers. The use of those chemicals either has never been authorized or has been sharply circumscribed by the Environmental Protection Agency, which sets U.S. government standards.

An AID spokesman announced yesterday that the agency "is not financing the export of leptophos [at the present time] and doesn't expect to do so." He said the decision was based on a recent report of a five-member EPA advisory panel, which

(Continued on Page 2, Col. 5)

Smith Back In Geneva; Sees Talks In Danger

GENEVA, Dec. 8 (UPI).—Rhodesia's Prime Minister Ian Smith warned today that the Rhodesia conference here will be "out the window" unless it returns to a focus on the original U.S.-British proposals for a peaceful transition to black-majority rule.

Mr. Smith, who returned to the conference today after a five-week absence, issued his warning after a one-hour, 40-minute private session with Ivor Richard, the British diplomat who is chairman of the conference.

Mr. Smith declared: "If you're going to break an agreement, you must face the consequences. It is a grave thing. Then the whole thing is out the window and we have to start again."

Mr. Smith insists that the British-U.S. proposals represented a non-negotiable package and were accepted as such by Rhodesia's white people.

"The meeting was inconclusive," Mr. Smith told newsmen after his session with Mr. Richard today.

"I put forward some ideas and we agreed to sleep on them and meet again tomorrow," the Prime Minister added.

Kissinger Plan

He decined to discuss the ideas he advanced but reiterated that he sticks firmly to the proposals made in September, with British backing, by outgoing U.S. Secretary of State Henry Kissinger.

"I think the British are sitting on the fence, trying to find out which way the thing is going to go ,and then they're going to jump accordingly," Mr. Smith said earlier today, on landing at the airport here.

Mr. Smith left the Geneva conference one week after its formal opening on Dec. 28. He said then that he was wasting his time here because Mr. Richard had failed to put the U.S.-British proposals before the five delegations—four black and one white.

The proposals, which London said constituted only a basis for negotiation and not a hard and fast peace package as Mr. Smith maintains, provide for an interim government with a black prime minister and majority but with whites retaining control of the army and police.

All four nationalist leaders here insist on a British presence in Rhodesia during the transitional period. British supervision of the transitional process would be in the hands of a commissioner or governor.

Mr. Smith rejected this idea when he flew in from Salisbury on a flight that first took him to Johannesburg and then to Zurich.

"A British presence would be more a hindrance than a help," he said.

Conference officials have all but ruled out any agreement by fiDec. 20—Britain's target date for a pact—and have said that there will undoubtedly have to be a second round possibly held elsewhere.

18 Deaths and an Arrest

SALISBURY, Rhodesia, Dec. 8 (UPI).—Rhodesia reported today that 18 blacks have been killed in the guerrilla war in recent days and announced the arrest of a Swiss priest on charges of "assisting terrorists."

A government spokesman said the Rev. Paul Egli, a Catholic missionary, "will be appearing in court shortly, facing five charges of assisting terrorists and failing to report [the presence of] terrorists." Another Catholic cleric, Bishop Donal Lamont of Umtali, is appealing a 10-year jail term imposed on him for failing to report the presence of guerrillas.

EEC Commissioner Sir Christopher Soames with Henry Kissinger in Brussels yesterday.

Ministers Give Tentative Go-Ahead

NATO Clears Early Warning Force

By James Goldsborough

BRUSSELS, Dec. 8 (IHT).—NATO defense ministers today gave a tentative political go-ahead to plans for the new airborne early warning force, a $2.4-billion project that is the biggest ever undertaken by the alliance.

Meeting here on the eve of the semiannual meeting of alliance foreign ministers—which is expected to be the last major foreign appearance by Secretary of State Henry Kissinger—the defense ministers seconded a plan that has had NATO military backing for several years.

The defense ministers' decision was regarded as less than final because of lingering reluctence in some national parliaments to bear the cost. But Joseph Luns, the NATO secretary-general, said tonight that only a "slight possibility" of failure remained.

U.S. Defense Secretary Donald Rumsfeld said he was encouraged by the action taken here today. "There was an endorsement of the military judgment that this early warning system was a necessity for the alliance," he said.

The plan calls for the establishment of a joint fleet of 27 Boeing E-3A aircraft to protect against possibility of a surprise attack. The system, called AWACS, for Airborne Warning and Control System, is designed particularly to protect against low-flying enemy aircraft that would not be detected by ground radar.

AWACS has been a hot issue at meetings of the North Atlantic Treaty Organization in recent years because of its cost—described by Mr. Luns tonight as "enormous." But it is necessary because present alliance early-warning systems are out of date, Mr. Luns said.

Experts have been working on ways for the NATO allies to produce enough parts for the new plane on their own territory to offset up to 18 per cent of the total cost to them. The defense ministers' communiqué tonight said that financial experts would meet early next month to examine the financial problems and pave the way for a final meeting of defense ministers. The political accords would then need endorsement by national legislatures.

The approval given to the project by the allies—the United States is already building 13 of the planes for its own use—reflected the growing concern in military circles over the continued Soviet defense effort.

At a news conference tonight, Mr. Rumsfeld commented on what he called the "increase in Soviet military spending in real terms," and said that in the last

But Further Talks Will Seek to Avoid Double Taxation

French Assembly Ends U.S. Tax Exemption

PARIS, Dec. 8 (IHT).—The National Assembly today passed a tax bill that includes a provision repealing Article 164 of the tax code, which has protected Americans residing in France from double taxation since before World War II.

Repeal of Article 164, however, will date from Jan. 1, 1978, giving American residents in France a year's time to adjust to the new French tax system. The repeal was part of a wider tax bill passed by the Assembly that provides tax relief for Frenchmen residing abroad.

The Assembly action occurred three months after the French Senate voted to preserve the article in the new tax bill. The two versions of the tax bill will now go to a joint commission to decide on a compromise version. The Assembly has the final say in the matter.

Between the Senate's consideration of it in August and Assembly adoption today, U.S. and French negotiators met to adopt provisions aimed at protecting Americans in France from most forms of double taxation. U.S. and French officials now say that most forms of income taxed in the United States will be exempt from taxation here.

Large Gray Area

The U.S. community in France, however, disputes this and maintains that there are several forms of income that will still be subject to double taxation. A large gray area exists, for example, on taxation of Americans who reside only part-time in France.

U.S. and French negotiators will begin meeting again early next year after the new U.S. administration takes office. U.S. officials say that one of the goals of the new negotiation will be to close any loopholes that still remain on double taxation.

"The goal of both governments is to avoid double taxation," a U.S. official commented. "We would expect that the U.S. community in France would stay in contact with us during the negotiations to make its views known."

The new negotiations will be carried out by officials from the French Finance Ministry and from the Tax Policy Office of the U.S. Treasury Department.

More Than 60 Treaties

A French Finance Ministry official pointed out that France has already drawn up tax treaties with more than 60 countries to avoid double taxation of foreign residents in France.

He added that France and the United States have begun discussions on eliminating all possibilities of double taxation of U.S. residents in France. The talks will resume in January or February of next year, he said.

If necessary, he added, the U.S.-French tax treaty will be revised to make sure that there is no double taxation. The problems are not complex and agreement should be reached and presented for legislative action shortly, he said.

In any case, the official stressed, there will be no effect of the repeal of Article 164 on U.S. residents until September, 1979, when income for 1978 will be taxed. And at that time, the U.S. taxpayer will be able to appeal the French tax system's decision if he feels that he has been taxed twice on the same revenue.

PLO Considering Plan to Establish Regime-in-Exile

By Henry Tanner

BEIRUT, Dec. 8 (NYT).—The leadership of the Palestine Liberation Organization is contemplating the formation of a government-in-exile before the start of negotiations in Geneva for a Middle East settlement, Palestinian sources said today.

The immediate purpose of such a step would be to make it easier for the Soviet Union and the United States to invite the Palestinians to participate in the conference, the sources said. The two superpowers are co-chairmen of the conference and must issue the invitations. The Palestinian leaders are reportedly moving toward acceptance of an Egyptian proposal for their inclusion in a single Arab delegation, whereas in the past they have insisted on forming a separate Palestinian delegation. They would still require an invitation from the superpowers, however.

Yassir Arafat, the head of the PLO, raised the issue of a government-in-exile last night at a meeting here with other leaders of the Palestinian movement, the sources said.

They added that President Tito of Yugoslavia and President Nicolae Ceausescu of Romania had both urged the formation of such a government in talks with Mr. Arafat during his visits to Belgrade and Bucharest earlier this week.

President Tito is reported to have told the guerrilla leader that 90 or more governments would give diplomatic recognition to a Palestinian government. Mr. Arafat returned from Eastern Europe yesterday. He is due to visit Moscow soon, after going to Cairo for talks with President Anwar Sadat.

The Soviet Union, too, is understood to have urged the Palestinians to form a provisional government-in-exile.

The idea was first proposed by Mr. Sadat in the spring of 1972.

Palestinian leaders have been saying that if a government were formed, its seat would be in Cairo, which is also the headquarters of the Arab League.

Many Palestinian leaders have in the past opposed the idea of forming a government before obtaining a territory of their own in which to place it.

Hardliners among them have argued that a provisional government, by soliciting diplomatic recognition, would be accepting the rules of the international community before being sure that this community was ready to satisfy the national aspirations of the Palestinians.

Military Acts Barred

In blunter terms, it was argued that if negotiations in Geneva or elsewhere failed and Israel did not withdraw from territories occupied in 1967, the Palestinians should be free to resume armed operations, including terrorist acts, which a government could not do.

Mr. Arafat was "testing the waters" when he raised the idea at last night's meeting, the Palestinian sources said. There will be thorough internal debate before a decision is reached, they said.

The meeting of the PLO leadership was the first in more than six months attended by representatives of as-Saiqa, the Syrian-controlled guerrilla organization that was expelled from the PLO by Mr. Arafat and his colleagues during the fighting between Palestinian commandos and the Syrian Army in Lebanon's recent civil war.

It was decided last night that the PLO's 42-member Central Council will meet in Damascus Sunday or Monday to discuss relations between as-Saiqa and the other guerrilla groups and to make preparations for a meeting of the full 174-member Palestine National Council (parliament), a session likely to be held in Cairo in January.

Israelis Bar Arab Bloc at Mideast Talks

While Still Backing Geneva Conference

UNITED NATIONS, N.Y., Dec. 8 (AP).—Israel declared today that it opposes the idea of a single Arab delegation to a reconvened Geneva conference on the Middle East.

"With or without the participation of the Palestinians, we are against negotiating with a single Arab delegation and this is our firm policy," Tuvia Saar, a spokesman for the Israeli delegation, declared.

The idea of merging the Arabs at the Geneva conference has been suggested as a way of settling one of the chief issues blocking the resumption of negotiations—the question of the participation by the Palestine Liberation Organization.

Israel, Arabs Agree

Israel and the Arabs agree that the Geneva conference, which met for two days in December, 1973, and has not reconvened since, should be called soon, but they are still far apart on the PLO issue.

The PLO demands that it take part in the conference as an independent entity along with Egypt, Syria, Jordan and Israel.

Israel, on the other hand, refuses to sit with the PLO.

The proposal for a single Arab negotiating team has been gaining momentum in Arab capitals in recent days.

Dispatches from Beirut have indicated that PLO leaders are moving toward acceptance of the proposal.

Some diplomats thought that Israel was also receptive to the idea when Israel's UN Ambassador Chaim Herzog told newsmen Monday that his government would "not check the credentials" of the members of the Arab delegations to Geneva.

But Mr. Saar said today that Mr. Herzog was "simply making a point" that the Palestinians may be included in the Jordanian delegation.

One-to-one Basis

"We may sit together with the Arabs at the opening ceremony, but the bargaining has to be done on one-to-one basis," he said.

The question of the Golan Heights, for instance, should be negotiated between Israel and Syria and not with anybody else, Mr. Saar added.

Meanwhile, it was reliably reported that Israel was ready to withdraw a General Assembly resolution urging Egypt, Israel, Jordan and Syria to meet in Geneva "without delay."

The document, the first resolution introduced to the Assembly by Israel in its 27 years of membership, faced certain defeat due to the overwhelming majority the Arabs command.

Earlier, the General Assembly formally approved Kurt Waldheim by acclamation as secretary-general for another five-year term.

Commons Passes Nationalization Bill by 3 Votes

LONDON, Dec. 8 (Reuters).—A bitterly contested bill to nationalize Britain's ship and aircraft building industries scraped over a major hurdle early today when the House of Commons passed it by 280 votes to 277.

But the Labor government, which is trying to steer Socialist measures through Parliament with only a one-vote majority, was immediately faced with a new opposition tactic.

The Conservatives said they would formally ask the speaker (chairman) to rule that the government could not invoke powers to curtail interference by the House of Lords, which the opposition dominates.

The Lords so altered the bill in the previous session of Parliament that it failed and had to be reintroduced.

The measure, which is being doggedly opposed by the Conservatives, could still take up to a year to get through the remaining parliamentary processes.

Student, 19, Fled in August

Leader of Soweto Uprising Predicts Race War

By Kathleen Teltsch

NEW YORK, Dec. 8 (NYT).—The 19-year-old youth who helped direct the student uprising in June in the black South African township of Soweto expects a racial conflict to erupt within five years and intends to be in the forefront.

"I'll be in South Africa with a gun in my hand and I think I'm going to enjoy shooting down white South Africans," Tsietsi Mashinini remarked calmly.

His recollections of the June events remain vivid but the youth leader related them dispassionately as if describing some remote incident in the course of a news conference yesterday sponsored by the American Committee on Africa at its offices here.

Until he fled the country in August, he was president of the Student Representative Council, which has emerged as the single most influential group in the completely segregated township of 1.5 million blacks.

Contrary to the claims of the white-minority government headed by Prime Minister John Vorster, there were no outside agitators and no "Communists" involved, the youth leader insisted. It was a revolt sparked by student protests against the imposed use in the high schools of Afrikaans—seen by the students as the language of the racist and oppressor and also a means of ensuring they would remain in the country as an available labor force.

The students carrying their placards converged on a Soweto high school and found the police waiting. He said they fired into the throng and an 11-year-old boy at his side fell to the ground, a bullet wound in his head—the first casualty. His estimates more than 350 others died later in Soweto and as the violence spread, the total likely reached 1,000. Authorities put the figure at 188.

Weeks in hiding followed while the government offered $575 for information leading to his arrest. He says he chose exile because he was convinced that once in the hands of the police, he would be tortured as others had been who were released from detention crippled or blinded.

He escaped to Botswana in August and said he narrowly evaded attempts to kidnap him by South African police. He made his way to London by means he prefers not to discuss and has been attending Kingsbridge Princeton College on a scholarship.

The young leader said he sees

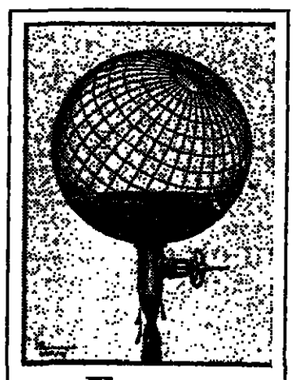
Sarkis Names a Professor To Be Premier of Lebanon

BEIRUT, Dec. 8 (Reuters).—Lebanese President Elias Sarkis has asked economics professor Selim al-Hoss, 46, a Sunni Moslem, to form a new government, the presidential palace announced tonight.

A palace statement, broadcast on television, said that the choice of Mr. Hoss ended two days of consultations by the President on the formation of a government to help rebuild the country.

Mr. Hoss, who headed the Industrial Development Bank when the civil war broke out more than 19 months ago, is expected to ask eight other technocrats to join his Cabinet. Both leftist and rightist politicians have announced their approval of a non-political government for a transition period.

Informed sources said that they expected the technocratic Cabinet to administer the country pending a political dialogue between various factions.



As Premier, Mr. Hoss would succeed Rashid Karami, who held the office at the outbreak of war in April of last year.

Fighting on Lebanon's major battlefronts was halted last month by Syrian troops acting under an Arab League mandate.

But tonight's presidential announcement followed reports that leftist and rightist Lebanese gunmen had clashed today near the Israeli border.

The Syrian forces have remained to the north of the Litani River, about 20 kilometers north of and roughly parallel to the Israeli border, which is believed to be the red line south of which

Headed by Britain's Roy Jenkins

New European Commission May Revive the EEC's Fortunes

PARIS (IHT).—The 13 new members of the European Economic Community's Executive Commission were designated in The Hague last week and, from the looks of the lineup, chances are that some of the members are not going to accept the commission's reputation as a political graveyard.

The new commission, headed by Britain's Roy Jenkins, takes office Jan. 1 for four years. With the commission currently in a state of full eclipse, this Jenkins commission may be the most important in the community's history.

Mr. Jenkins, the former British home secretary and chancellor of the Exchequer, has spent the last few months on a talent search throughout the EEC capitals. Some countries, usually the most federalist-minded, such as the Netherlands, Italy and Belgium, nominated powerful and well-known figures to his commission. In some cases, in France, for example, Mr. Jenkins got the men he wanted. In others, West Germany, he did not.

The next few years will be crucial for the commission. Never able to fill the executive role intended for it—because of nationalist opposition in France and West Germany—the commission has suffered even more since the community's chiefs of government established the European Council two years ago to act as an executive body.

But with the council itself now proving ineffective, a strong and independent commission could turn the community's fortunes around. Mr. Jenkins set out to pack it with powerful political figures who wanted something more than a comfortable ticket to retirement.

Following is a list of the men who will serve with Mr. Jenkins on the new commission. The four largest EEC nations have two commissioners each; the five smallest, one each.

Italy: Lorenzo Natali, Christian Democrat, former minister of agriculture. Antonio Giolitti, Socialist, member of Parliament and economist.

France: François-Xavier Ortoli and Claude Cheysson. Both French commissioners are holdovers from the previous commission and both are highly regarded. Mr. Cheysson is a prominent Socialist and was a bête noire of former Prime Minister Jacques Chirac. However, it is Mr. Chirac who is out of office and Mr. Cheysson who stays.

West Germany: Willy Haferkamp and Guido Brunner are also holdovers. Mr. Jenkins apparently erred in asking Chancellor Helmut Schmidt to replace Mr. Haferkamp, who has held the commission's economics and finance portfolios, with someone with more political clout. Mr. Schmidt never has been a commission fan and the last thing he wants to give it is political clout.

Britain: Mr. Jenkins himself, Laborite, and Christopher Tugendhat, Conservative MP from Westminster. The Tories originally designated John Davies but Mr. Jenkins argued for somebody on the rise. Mr. Tugendhat, 39, is a former columnist for the Financial Times, has published two books and is a Tory with a future.

Netherlands: The Dutch are sending Henk Vredeling, an outspoken and unorthodox Socialist who is their defense minister.

Belgium: The Belgians have designated Viscount Etienne Davignon, their best-known diplomat, who is head of the International Energy Agency and gave his name to the Davignon Committee, the EEC's first political coordinating body.

Rounding out the commission are Finn Olaf Gundelach of Denmark, Richard Burke of Ireland, and Raymond Vouel of Luxembourg.

One striking point about the new commission is the high quality of the Socialists who are on it. Messrs. Jenkins, Giolitti, Cheysson and Vredeling make up a solid Socialist nucleus that could give the commission a tendency that it has not had in the past.

Members of the commission will visit Mr. Jenkins in a week or two at his home in Berkshire. The most pressing problem is distribution of portfolios, for at least four of the commissioners, Messrs. Vredeling, Giolitti, Davignon and Ortoli, have indicated that their acceptance depended on their new jobs.

There is stiff competition for the key posts, which include foreign relations, held by Sir Christopher Soames in the previous commission; economics and finance, held by Mr. Haferkamp; aid and development, held by Mr. Cheysson, and agriculture, held by Pierre Lardinois, a Dutchman. Regional development, industry and energy are other key portfolios.

The next four years will determine not only the future of the commission but also very probably the future of the European Council and the Council of Ministers.

The council's future, following its unsuccessful recent meetings, is in doubt. The European Parliament, too, will undergo significant changes with the direct election of its members, which will start in 1978. The next four years would be an opportune time for the commission to reassert itself as an effective EEC executive body.

NATO's Defense Ministers Clear Early Warning Force

(Continued from Page 1)

two years the alliance had taken steps to meet it.

Calling cooperation among the NATO allies "higher than ever before," he said: "I am leaving my post optimistically. This is a dangerous and untidy world, I am reassured that the alliance is doing its job.

Experts still must work out many problems in the AWACS agreement, but if they succeed, they will put in place a system that, in Mr. Luns's words tonight, "will sight anything that flies, from storks upwards."

The planes in all likelihood will be jointly owned, rather than nationally, with four NATO countries—the United States, West Germany, Britain and Canada—paying most of the costs. French approval is still tentative. The smaller NATO nations would pay largely symbolic costs for the system.

Although final figures remain to be negotiated, it is estimated that the United States would pay roughly one-third of the $2.4 billion.

The plane itself is a modified 707 with a huge radar tower on top. It is essentially designed to detect low-flying aircraft such as the Soviet Foxbat, the MIG-25, which recently slipped into Japan piloted by a defecting Russian officer.

At his news conference, Mr. Rumsfeld said that in his remarks on Spain yesterday he had not called for presence of Spanish observers at NATO meetings but rather their inclusion in meetings of NATO parliamentarians. There was some concern today that Washington was trying to force the Spanish issue—despite the objections of some of the more liberal NATO nations—even before the upcoming Spanish elections.

But despite Mr. Rumsfeld's clarification, it remains clear that the outgoing administration is as committed to Spanish entry into NATO as ever.

Basque Seeking Swedish Haven

STOCKHOLM, Dec. 8 (Reuters).—A leading member of the Basque nationalist movement ETA has applied for political asylum in Sweden, his lawyer said today.

The lawyer said that Jose Ignacio Abaitua Gomeza entered Sweden a month ago. Mr. Abaitua Gomeza, 28, had lived in France since 1968, but his lawyer, Bengt Soederstroem, said he left earlier this year because he feared possible extradition to Spain now that relations have improved between the two countries.

The police said today that Mr. Abaitua Gomeza would need to supply more details of why he sought asylum before a decision could be made.

Pearl Harbor Day

PEARL HARBOR, Hawaii, Dec. 8 (AP).—The 35th anniversary of the Japanese attack on Pearl Harbor was observed yesterday.

Giscard Will Call Summit of West's Industrial Powers

PARIS, Dec. 8 (Reuters).—President Valéry Giscard d'Estaing announced here today his intention to call a third summit conference of the United States and other leading industrial nations to discuss the world economic crisis.

A special European summit meeting will discuss the problem before the proposed conference, expected to be held within six months, he said.

At the weekly Cabinet meeting, Mr. Giscard d'Estaing said he intended to ask President-elect Jimmy Carter, the new Japanese government and other leading Western industrialized countries to meet before next summer.

France was host to the first economic summit last November at Rambouillet, near Paris, with the United States holding the second one in Puerto Rico last June.

French officials said they did not yet know where the next one would be held. They said that West Germany, Britain and Italy have already indicated willingness to participate.

Mr. Giscard d'Estaing first brought up his idea for another economic summit at a meeting of the European Economic Community heads of state and government at The Hague early last week.

Milan Leftists Clash With Police Guarding La Scala Performance

MILAN, Dec. 8 (Reuters).—The police have charged 30 people following violent leftist demonstrations outside La Scala opera house last night as the new season began. Demonstrators protesting the high price of tickets to the performance of Verdi's "Otello"—up to 140,000 lire ($160)—clashed with 5,000 police guarding the theater.

Ten persons, eight of them policemen, were injured. One of the protesters was in intensive care after a gasoline bomb exploded in the crowd.

"It is like going to war," a lady wearing a fur coat said as she arrived at the theater.

"It is no longer amusing coming to a La Scala premiere under such conditions" another patron said.

Press comment today was generally hostile to the demonstrators but the Rome Communist daily Paese Sera described the evening as "an offense to the poor in this time of austerity and to the unemployed."

Another leftist newspaper, La Repubblica, said the point of the protest was lost since the opera was broadcast live on Italian television. "Even the slums have TV aerials," it added.

City officials said it would be some time before they could estimate the damage caused in the incidents.

A review of the opera performance appears on Page 10.

S. African Leader of Uprisin Expects Race War in 5 Yea

(Continued from Page 1)

no prospect of a political settlement being achieved which will transfer political power to the black majority by peaceful means.

Instead, he attested to the growing sentiment among blacks that there would have to be an "armed struggle, very soon." He also predicted that the organized students would take to the streets and said that planning very probably was taking place underground for such anti-government actions.

In the same quiet voice, he said he could not foresee a South Africa in which whites and blacks "would live happily ever after," because there has been too much bitterness created in the minds of the oppressed black majority. "People know what they will do to the whites if they get in power."

What troubles him deeply, he said, is his worry that lack of adequate education has made the majority unprepared for political responsibility. Several times he repeated his concern, saying blacks who have gone abroad have learned about Marxism and "all the isms" but students denied adequate schooling were "politically ignorant."

'Communist Horror'

As a student at home, he said, he heard a lot about the "Communist horror" and that it was the enemy of the white regime. He said he was curious about Communism but had found he did not have the education to grasp its meaning. "I tried to make it my friend but it was heavy," he said, adding that used the past tense deliberat

Sarkis Picks A Technocrat

(Continued from Page 1)

Israel has indicated that it would not tolerate Arab forces.

A major obstacle to the designation of Mr. Hoss as Premier was removed when former President Camille Chamoun, a rightist leader, announced that he did not object to a government of technocrats, those who are technical experts in their fields.

Earlier, Mr. Chamoun, leader of the National Liberal party, had insisted on a political government.

He told newsmen after seeing President Sarkis today: "I would have wished the government to be formed of politicians, as the present situation in the country is political rather than that of reconstitution."

But he said that he had taken into account that the President wished to avoid political overtones and turn to economic and social issues.

"We should not ignore this viewpoint," he added.

Official sources said that Mr. Hoss would not hold the usual consultations on formation of the government, but would announce the Cabinet list tomorrow night.

Syria, Jordan S A Form of Unio Between States

AMMAN, Dec. 8 (Reuters Syria and Jordan today annou ed their intention to creat form of union of the two co tries and have set up a com tee to work out the steps unity.

The plan was set out in a j statement issued after a two official visit here by Syrian P ident Hafez al-Assad.

A high-level joint commit will work out the steps tow closer cooperation and report a supreme leadership comm of President Assad and Jord King Hussein.

The two leaders reviewed progress toward coordination achieved and decided that more advanced formula on t tying governmental syst should now be drawn up, statement said.

Informed sources said ea that they gave final approva unification of their econo educational, legal, telecommun tions and customs systems. move was recommended by t premiers meeting in Damas last month.

Jordan and Syria were virtu at war six years ago over K Hussein's successful military o er of Palestinian guerrillas.

Israel to Cease Jerusalem Digs

JERUSALEM, Dec. 8 (Reute —Archaeological excavations Jerusalem's Temple Mount, wh provoked a major controversy Unesco, will cease next Ap leaders of the Israeli mis there said today.

The excavations, at the foo the Wailing Wall, have been most completed and the ar will soon be open to the pub Meir Ben-Dov, the mission's ch ty director, said.

The decision to cease the d was not connected with the *domination of Israel by the* ed Nations Educational, Scien and Cultural Organization, added.

U.S. Helped Ship Overseas Pesticides Banned at Home

(Continued from Page 1)

recommended against its further use on food products. Cotton is considered a food product because crushed cottonseed produces a widely used vegetable oil.

product because crushed cottonseed produces a widely used vegetable oil.

Previous shipments of pesticides not registered for use in the United States were defended by AID officials on several counts.

They said that the chemicals help boost food production in some countries where malnutrition is widespread. Those pesticides may also attack devastating pests that are unknown in the United States.

However, Richard Frank, the attorney who represented the environmental groups in the 1975 suit against AID, said: "AID just sort of gave people these pesticides. They have not been informing the foreign governments of the problems connected with them."

The value of all pesticides exported with AID financing has ranged from $28.1 million in fiscal 1970, when they accounted for 13.9 per cent of total U.S. pesticide sales overseas, to $11 million in fiscal 1975, when the share was 1.9 per cent.

AID officials said that they were unaware of any harmful effects of leptophos when financing was approved. However, it was learned that the Environmental Protection Agency had been reviewing the substance's possible impact on the central nervous system of humans since 1974, and had never registered the pesticide for use in the United States.

The pesticide, made in Bayport, Texas, has been marketed abroad as phosvel. It was sold to Egypt, among other countries.

AID has contracted with the Montrose Chemical Corp. in Torrance, Calif., to produce DDT for foreign use, both in "public health" programs for spraying malarial mosquitoes and, until mid-1974, for spraying on crops. India, Ethiopia, Nepal, Indonesia, South Vietnam and Haiti have received DDT for malaria control.

Cosmonaut Training Starts for Soviet Allies

MOSCOW, Dec. 8 (AP).—Trainee cosmonauts from Czechoslovakia, Poland and East Germany have arrived at the Star City training center near Moscow to prepare for missions aboard Soviet spacecraft and space stations, Tass said today.

The Soviet Union agreed Sept. 14 with Bulgaria, Hungary, East Germany, Cuba, Mongolia, Romania and Czechoslovakia to include their cosmonauts in missions between 1978 and 1983.

CHANGING FACE OF LONDON— Dome of St. Paul's from St. Martin's le Grand.

Carter Interviews Former U.S. Advisers

By Helen Dewar

ATLANTA, Dec. 8 (WP).—President-elect Jimmy Carter turned again to the old Washington governmental establishment yesterday in his search for cabinet and subcabinet officials.

A parade of former Kennedy, Johnson and Nixon administration figures had talks with the President-elect in the Georgia governor's mansion here. They were said to be under consideration for jobs in either the defense or foreign policy branches of the government.

None of them were the "fresh new faces" that Mr. Carter and his aides had promised to bring into the new administration next month.

They included Paul Warnke, an assistant defense secretary in the Johnson administration who is under consideration for secretary of defense or director of the Central Intelligence Agency; James Schlesinger, who held those two posts in the Nixon and Ford administrations and has been mentioned for them again; and Zbigniew Brzezinski, a former State Department official, Columbia University professor and Carter campaign adviser who has been mentioned as a possible national security adviser to the incoming president.

Mr. Carter also interviewed two Washington lawyers, Joseph Califano, who held both defense and domestic policy positions in the Kennedy and Johnson administrations, and Patricia Harris, a former Howard University law school dean and ambassador to Luxembourg.

Mr. Califano and Mrs. Harris have been mentioned for various posts in the Carter administration but also may have been asked here for consultation on other matters.

Mr. Carter is scheduled to meet with several other prospective appointees today before flying to Washington for two days of meetings. Among those he will see here is California Institute of Technology President Harold Brown, a former secretary of the Air Force, who is considered to be a leading candidate for secretary of defense.

None of the other visitors today was announced. Charles Schultze, who was director of the budget in the Johnson administration and is now at the Brookings Institution, is high on a list of prospective defense secretaries that is circulating on Capitol Hill, but there was no word on whether he will meet with Mr. Carter here or in Washington this week.

Although Mr. Carter is believed to be nearing decisions on top cabinet and subcabinet posts in the economic and defense fields, no appointments are expected before he returns to Plains, Ga., late Friday, sources said.

Aides Lack Defense Data

WASHINGTON, Dec. 8 (UPI).—Mr. Carter's transition team at the Defense Department is being hampered by a lack of information on the more than $120-billion military budget President Ford will submit to Congress before leaving office in January, the head of the team said yesterday.

Richard Steadman, a New York investment banker who is Mr. Carter's senior representative at the Pentagon, said he had no indication when he will be provided with information on the military budget.

News Analysis

arter Cabinet Appointments Held Reassuring

By Hedrick Smith

ASHINGTON, Dec. 8 (NYT). ith his first two Cabinet ap- tments, President-elect Jim- Carter has offered reassur- to the worlds of business diplomacy and signaled to icians that he will dominate cy-making in the crucial areas oreign policy and the budget. has underscored the urgen- he feels to move quickly in h field sby announcing ahead ll other Cabinet appointments choices of Cyrus Vance as tary of state and Bert Lance irector of the Office of Man- ment and Budget.

nd he has quite deliberately ek a contrast with the Nixon- d administration and the high- ersonalized, shuttle diplomacy ecretary of State Henry Kis- r with the selection of a effacing negotiator and crisis ager like Mr. Vance to take ge of the State Department. so doing, he has laid the ndwork for setting foreign y objectives from the White se.

t reassuring allies and ad- aries was clearly in his mind. before the appointments announced, one of his long- aides remarked privately Mr. Vance was a figure of ibrity and stature, widely ected in this country and ad, and that Mr. Lance, while well known nationally, had a very favorable reputation olitical and economic circles he Southeast.

ith their selection, Mr. Car- also began to build an ad- ration that will blend ex- nced Washington insiders newcoers to the federal gov- ment drawn from around the try.

Mr. Carter's news confer- Mr. Lance came across as umable, self-confident Geor- banker with the gregarious ility of a Southern politician. Mr. Vance as an experienced er-diplomat with the discreet ve of a man accustomed to ways of Yale, Wall Street the Eastern establishment.

ong his colleagues in Geor- Mr. Lance has a reputation a fiscal conservative and, g the foreign policy com- ity of the Democratic party, s regarded as a moderate l.

t neither is known for ounced views or a clearcut ogical stripe that would su- gur the policy line of the Carter administration. Both are described by associates as good technicians, loyal team players prepared to follow Mr. Carter's lead, a point that Mr. Lance emphasized when someone asked whether he would be the driving force behind the new administration's plans for reorganizing the government.

"I am sure that the President is going to be the driving force behind the reorganization," Mr. Lance replied. "I only hope that I'll be able to keep up and carry out what he wants done."

Those who know Mr. Vance say that his style in the past has been to let the White House or other superiors take the lead.

In both men, Mr. Carter feels he has found persuasive advocates with Congress as well with the business community or diplomatic partners. As a high Defense Departent official in the Johnson administration, Mr. Vance carried weight with Capitol Hill. And Mr. Carter's aides say that, when he was governor or Georgia, Mr Lance was their best salesman with the Georgia Legislature.

It is against the backdrop of Mr. Carter's own relative newness to the field of foreign affairs that many here regarded Mr. Vancey's extensive experience with the Johnson administration as reassuring to such diverse diplomatic partners as the British, Israelis and Russians, all of whom apparently let Mr. Carter know through private channels that they thought highly of Mr. Vance.

Not only has the lawyer gained a reputation for calming troubled relations with allies during diplomatic missions to Cyprus and Korea in the late 1960s, but also for effective negotiations with the North Vietnamese in Paris in 1968 and for leading private delegations to Moscow to talk about arms control and other means of easing East-West tensions.

In Mr. Vance, Mr. Carter has chosen someone in the mold of Dean Rusk in the Kennedy administration or Christian Herter at the end of the Eisenhower administration. The professional diplomats who know Mr. Vance expect him to run a well-organized department but to maintain a low profile.

Indeed, in his own brief comments about Mr. Vance and Mr. Lance, the President-elect stressed their competence rather than conceptual brilliance or policy innovation. The one common quality for which he praised both men was his expectation that each would be "a good manager" of his agency or department. And in harmony with that, Mr. Vance immediately indicated that he would shun what Mr. Carter derisively termed the "Lone Ranger" diplomacy of Mr. Kissinger and would seek to "delegate responsibility" to his aides and to other negotiators.

AP.

Bert Lance

Despite several years in high government posts, Mr. Vance has left little public record of strong personal views on policy issues. Earlier this year, he wrote an article for The New York Times advocating stricter measures to control the sale of U.S. arms to other countries.

U.S. Exhibition In Moscow Gets 2d Bomb Threat

MOSCOW, Dec. 8 (AP).—The U.S. Bicentennial exhibit here was evacuated and closed for the day today after a telephoned bomb threat, but no bomb was found. It was the second such incident in three weeks.

About 1,600 visitors were in the Sokolniki Park exhibition hall when an anonymous caller said a plastic explosive would go off. U.S. officials said the Russians were sure that the threat was a hoax, but Frank Ursino, the exhibit's U.S. director, decided to close the show for the day.

The bomb squad was not called this time, as it had been after a Nov. 17 threat. On that occasion, it took more than three hours for the quad to arrive and it found nothing. U.S. officials said privately they suspected that the first bomb threat was an attempt by Soviet officials to discourage visitors.

A brief search was made today by the exhibit's U.S. staff. Up to the time the pavilion was evacuated, 9,860 persons had filed through and 1,000 more were waiting in line in a wet snow.

"This could have been our biggest day," Mr. Ursino told a reporter. So far, 214,000 persons have seen the show, which opened Nov. 11. It closes Monday.

After Leaving the White House

Ford Expected by Associates To Keep Active Political Role

By Lou Cannon

WASHINGTON, Dec. 8 (WP).—President Ford is expected to continue to play an active political role after he leaves the White House next month, according to aides and intimates who have discussed his future with him.

A close assistant, while emphasizing that "nothing has been set in cement," gave this picture of Mr. Ford's likely role once Jimmy Carter becomes President:

Mr. Ford will serve on a Republican policy body, probably a newly created unit modeled after the Republican Coordinating Committee of the mid-1960s. As a narrowly defeated and widely respected former president, Mr. Ford will be looked to by other leading Republicans as a principal spokesman on public policy issues.

Mr. Ford will also be available to help his party as needed. While not expected to travel at the sometimes frenetic pace he maintained as House minority leader or vice-president, he will be available to speak at key Republican fund-raising functions.

Recruiting Candidates

Most likely, he will also recruit some House members or other prospective Republican candidates to run for Senate seats or governorships in 1978.

But Mr. Ford is expected to be selective in his political activity, finding plenty of time for the recreation he enjoys. Although nothing has been announced officially, it is considered virtually certain that Mr. Ford will divide his time between golfing in Palm Springs, Calif., where he probably will purchase a home, and the skiing area of Vail, Colo., where he already owns a residence.

One of Mr. Ford's associates made what he called "an educated guess" that Mr. Ford might also accept the presidency of a private college, perhaps in California. This aide said that he expected the President to follow the example of many of his predecessors and write a book, although perhaps not immediately.

The general picture given of Mr. Ford by those who have seen him within the last two weeks is of a competitive, somewhat disappointed man gradually emerging from the doldrums of defeat.

"Sure, he was down in the dumps right after the election," an aide said. "Who wouldn't be after he came from 30 points back and just fell short? But he has accepted defeat now and he is looking ahead."

The public sign of this acceptance has been Mr. Ford's insistence on a smooth and harmonious government transition to the Carter administration. A more private sign has been his firm and repeated rejection of entreaties from some Republicans to lend moral support to challenges to the close election results in Ohio and other states.

The President has pointed out that he won more states narrowly than Mr. Carter did and has said it would be unbecoming of him to leave office asking for a recount.

White House spokesmen and the President's friends have gone out of their way to discount stories that Mr. Ford is despondent. His wife, Betty, last week told newsmen that his attitude is "very good" and also denied that the President dislikes Mr. Carter.

Mr. Ford is again seeing a fairly steady stream of visitors and granting some press interviews.

Whatever he does when out of office, he will be able to live comfortably. His presidential and congressional pensions will give him an income of more than $100,000 a year and he will have various benefits for the rest of his life under two laws that apply to former presidents.

Newsman Wins L.A. Court Fight

LOS ANGELES, Dec. 8 (AP).—Newsman William Farr, who served 46 days in jail to protect a news source, has won what appears to be the last round in his five-year contempt-of-court battle with the judge in the Charles Manson trial.

The California Second District Court of Appeal said that the Los Angeles Times reporter could not be punished further for refusing to name names.

A three-justice panel held this week that Superior Court Judge Charles Older was trying to prosecute Mr. Farr twice for the same offense—his refusal to tell the source of a story detailing plans by the Manson "family" to kill numerous celebrities.

John Garner Concedes

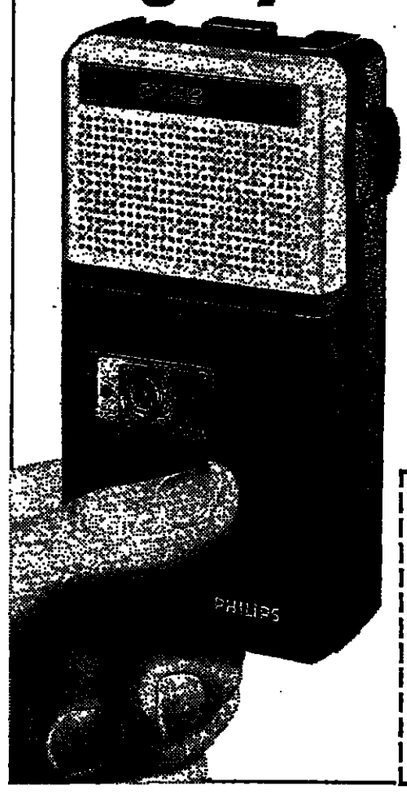
SEATTLE, Dec. 8 (AP).—John Nance Garner, Republican challenger for the Second District congressional seat held by Rep. Lloyd Meeds, conceded yesterday after gaining only a handful of votes in a recount.

Christmas 1976

Is Last for National Tree

WASHINGTON, Dec. 7 (AP).—A 44-foot Colorado blue spruce that has been the national Christmas tree is dying from root damage and this season will be its last. "It will be next year's Yule log," said National Park Service ranger George Berklacy as workmen used a crane to adorn the 45-year-old tree.

The tree was transplanted in 1973 from Shickshinny, Pa., to the Ellipse behind the White House to serve as the first permanent Christmas tree. Previously, cut trees were used.



The Park Service plans to replace it with a new permanent tree next October, "but this time we will try to locate one in Virginia or Maryland and one of roughly the same elevation," Mr. Berklacy said.

150 places where scotch drinkers can order Jack Daniel's.

Scotch drinkers are a tenacious breed. But when they try Jack Daniel's for a change, many are surprised at the gentle flavor they find. Every drop of our whiskey is seeped through 12 feet of charcoal, a process that makes it the unique, favorite sipping-whiskey of America.

Unfortunately, this slow process occasionally makes Jack Daniel's hard to find in some areas. The restaurants, bars and hotels listed below, however, are a few of the places where it is in plentiful supply. At these establishments, scotch drinkers may find that they agree with drinkers of American whiskey on the smoothness of Jack Daniel's.

Theft, Fraud, Embezzlement, Blackmail

Crimes by Computer Are Increasing in the U.S.

By Thomas O'Toole

WASHINGTON, Dec. 8 (WP).—The National Institutes of Health have just reworked the computers containing detailed records of their psychiatric patients so that only doctors and nurses given secret codes can retrieve the records.

The Secret Service has rewired the computer where it keeps the names of 40,000 people it identifies as potential political assassins so only a handful of coded agents can reach into the machine for their whereabouts.

These examples spotlight a growing concern in the federal government with a new kind of criminal, the specialist who can use a computer to help him steal, defraud, embezzle, sabotage and even blackmail.

The Secret Service tightened security on its file partly because it does not want any potential assassins infiltrating the file and knowing they are being watched. One reason NIH is putting new locks on psychiatric files is a fear that blackmail might be behind an intruder's attempts to steal the records of members of Congress or the Cabinet hospitalized with mental problems.

Consulting Firms

Consulting firms Ernst & Ernst and Arthur D. Little are advising six federal agencies on how to avoid computer fraud. The Army teaches its logistics officers about computer fraud and the FBI runs a four-week course where frauds are simulated on a computer and agents in training told to break them.

The Department of Defense Computer Institute now employs in its security and privacy department eight people who investigate breaches of computer security. The National Security Agency has a similar team, but its main job is to devise new ways of protecting the agency's supersecret computers from infiltration.

Crime by computer is on the rise, inside and outside the federal government. More than 400 cases have been documented in private industry in the last eight years, and the victims have lost $200 million. A study by Congress's General Accounting Office identified 69 computer crimes that in the last two years defrauded federal agencies of $3 million.

In a case at the Internal Revenue Service, a programmer noticed a buildup of unclaimed tax credits in a computer printout, then rigged the machine to transfer the money to a relative's account. Luck ran out on him when the real claimant appeared to get the money.

An Air Force sergeant computerized a fuel-ordering system for Kelly Air Force Base in Texas, then used the computer to buy bogus fuel from suppliers who did not exist. The computer freely issued checks to the fictitious companies set up by the sergeant and his accomplices.

The checks were sent to banks where the conspirators had opened accounts for their bogus companies. The sergeant manipulated the computer's memory so it did not miss the fuel Kelly AFB was not getting. By the time the sergeant was caught, he had stolen $100,000.

A Midwest bank president was blackmailed by a teller who forged access to a computer to retrieve the bank president's school records, which showed he had flunked out of college.

A disgruntled employee of a West Coast company wrote a program for its computer so that six months after he quit, the program he left behind erased every account receivable from the computer's memory. The company no longer knew who owed it money or how much. It could not send bills. It put an advertisement in a West Coast newspaper pleading with customers to pay their bills. They did not and the company went bankrupt.

Computer espionage is here, too. The State Department almost expelled a Soviet diplomat six years ago for attempting to recruit employees of a computer manufacturer which had access to Pentagon computers.

Of 60 cases involving computer fraud in banks, just three were solved by audits. None of the 69 federal cases cited by the GAO was solved through audits.

In one case a computer services firm employee was turned in by his wife partly because he was spending the money he stole from the company on another woman. A bank teller who used computers at Union Dime Savings Bank in New York to embezzle $1.5 million was caught because he lost the money at the racetracks.

Donn Parker of the Stanford Research Institute, a Palo Alto, Calif., consulting firm, said he thinks at least 85 per cent of computer criminals are not caught.

Of the 200,000 computers at work in the United States only 200 are rated "secure" by computer experts. These are the machines serving the State Department, the National Security Agency, the FBI, the Pentagon and the CIA.

Some computer experts are not even sure about the machines at these agencies. For some reason a Pentagon computer started spitting out a battle plan for World War III a few years ago at a terminal that was not "cleared" to receive the plan. The positions of every warship, every carrier, every aircraft were laid out in the plan, which was seen by at least 10 persons.

Some experts believe computer crime will grow and involve larger sums and bigger crimes. So far, the record for computer crime is held by 22 men who were convicted in the 1973 Equity Funding scandal, where a computer at the Los Angeles-based firm was used to write 64,000 fake insurance policies that were sold for $3 billion.

The bogus insurance policies were stored on computer tapes with nothing on paper. The tapes revealed only real insurance policies to auditors. The 64,000 fake policies could only be called up by a secret code, which was known only to the 22 Equity Funding officials convicted in the fraud. Seventeen are in prison; five got off with fines and probation sentences.

Associated Press.

Leonid Brezhnev with his great-granddaughter Galya, from the photo biography released on 70th birthday.

Biographical Film, Photo Book Mark Brezhnev's 70th Birthday

MOSCOW, Dec. 8 (UPI).—Soviet authorities today announced publication of a photo biography and release of a documentary film to mark the 70th birthday of the Communist party general secretary, Leonid Brezhnev.

Mr. Brezhnev will be 70 on Dec. 19, and the newly announced book and film are the latest entries in a rising flood of public honors for him.

The press agency Tass released a 25-page review of the Brezhnev photo biography, published by Moscow's Planeta publishers, entitled, "Leonid Ilyich Brezhnev: Pages of Life, Pages of the Epoch."

"The numerous photographs featured in the album tell a vivid story of the life and activity of Leonid Brezhnev, the son of the Leninist party, the son of the working people who is working with tireless energy for peace, the greatness and prosperity of his socialist motherland," Tass said.

Tass also announced that the documentary film of the life of Mr. Brezhnev, entitled "The Life Story of a Communist," was premiered in his home town of Dneprodzerzhinsk, in the Ukraine.

Seoul Insists U.S. Return KCIA Agent

Denies He Defected In Bribery Scandal

SEOUL, Dec. 8 (UPI).—A ranking government official demanded today that the United States deny refuge to a South Korean Central Intelligence Agency operative, claiming that the Seoul government has found no grounds to believe that the alleged defector "chose to stay in the United States of his own will."

The official, speaking to a group of foreign correspondents and asking not to be identified, brought up the case of Kim Sang Keun. Mr. Kim, a member of the staff at the Korean Embassy in Washington, reportedly defected last week and is said to have volunteered to the U.S. information on how South Korean agents bribed U.S. congressmen to influence pro-Seoul legislation.

"The Korean side still demands the United States authorities reinstate counselor Kim's physical freedom in accordance with international laws and practices," the official said.

"The Korean side has found ground to believe that counselor Kim 'chose to stay in the United States of his own will,' as cited by the United States authorities, the Seoul side went on.

Question of His Job

Published reports in Washington have said Mr. Kim was deputy station chief for Korean Central Intelligence Agency in the U.S. capital. He reportedly sought asylum following publication of reports that KCIA agents have bribed congressmen.

The Seoul official did not identify Mr. Kim as the KCIA deputy station chief. He referred to him only as "Counselor Kim."

"The Korean government through diplomatic channels has repeatedly requested the United States government to restore Counselor Kim's physical freedom and to arrange an interview with him by the representatives of the Korean Embassy in the United States," the official said.

"The United States has so far failed to reply to this request. It has even withheld information on Counselor Kim's present whereabouts, and his family has been placed under surveillance by agents of the U.S. authorities," the Seoul official declared.

Blackout Protested

SEOUL, Dec. 8 (AP).—A group of Korean students demanded today that their government give them the full story of the Korean bribery scandal in Washington.

Plainclothes police broke up a demonstration by about 500 students, most of them from Seoul National University's law school, demanding the lifting of the government's blackout on news of the scandal. A number of the demonstrators were reported arrested.

Park Foe Convicted By S. Korean Court

SEOUL, Dec. 8 (NYT).—A former member of the South Korean National Assembly was convicted on charges of election law violations yesterday and sentenced to a year's imprisonment.

The Seoul District Court found Kim Ok Son, 42, a former opposition lawmaker who denounced President Park Chung Hee as a dictator, guilty on several counts including an assault on policemen during the 1971 parliamentary election. She was not jailed immediately as the verdict carried a two-year stay of sentence pending appeal.

Paris Talks Begin On Press Dispute

PARIS, Dec. 8 (UPI).—French trade union leaders and a government-appointed mediator began talks today on a press dispute that mushroomed into a widespread newspaper strike and a show of force by leftists.

As the unions agreed to negotiate with the government, morning dailies appeared on Paris newsstands for the first time since Sunday, when police ousted striking printers from the offices of the newspaper Parisien Libéré, ending a 20-month occupation and sparking a storm of protest.

At a news conference today Prime Minister Raymond Barre said he had personally ordered the Interior Ministry to use police to evacuate the Parisien Libéré offices.

Plainclothes Police To Ride Rome Buses

ROME, Dec. 8 (AP).—Plainclothes police will begin riding buses after dark here in an effort to halt a wave of violence against public transport vehicles.

Police officials met after a pistol attack on a bus last week led bus drivers to stop service to protest the lack of security. There have been more than 30 cases in recent weeks of vandals throwing missiles or firing pistols at city buses for no apparent reason. No one has been seriously injured.

Break in Soviet Nonproliferation Stand

Russia Will Sell India Atomic-Plant Water

By Don Oberdorfer

WASHINGTON, Dec. 8 (WP).—The Soviet Union has agreed to sell 200 tons of heavy water for use in India's nuclear program following Canada's refusal to supply the material.

The decision, which became known when India reported the transaction to the International Atomic Energy Agency, is a rare case of Soviet willingness to supply nuclear materials to a country with a bomb-making capability. As such, it is causing concern among some U.S. officials and senior members of President-elect Jimmy Carter's incoming team.

Soviet cooperation is vital to the plans for international action to curb the spread of nuclear weapons, and until now the Russians have been more cautious than the United States and other Western countries in their nuclear exports.

In a meeting last month of the "London Club" of nuclear-exporting nations, the Soviet Union proposed to tighten controls on atomic sales to states that so far do not have nuclear arms. Several European countries are reported to have reservations about the far-reaching proposal. The United States asked that a decision be put off until the next meeting, which will take place after the Carter administration is installed Jan. 20.

The decision to sell the heavy water to India appears to some experts to be inconsistent with the generally tough Soviet stand. These experts suggest that in this case, Russia placed a higher value on its bilateral relations with a friendly country than on its nonproliferation objectives.

Soviet officials have indicated that the heavy water is intended for use in the Canadian-supplied Rajasthan Atomic Power Plant and that international inspection and safeguards will be required as well as a pledge from India that the material will not be used to make atomic weapons. In view of this, some U.S. experts believe the Soviet sale, while it is unusual, does not contradict Russia's nonproliferation stand.

Heavy water, which is a chemical found rarely in nature, is used to help control nuclear reactions.

U.S. and Canadian-supplied heavy water, some of which was sold directly to India in 1956, is believed to have been used by India in producing its May, 1974, nuclear explosion.

India now produces a small amount of heavy water in plants of its own, but not enough to fuel a major installation such as the Rajasthan power reactor. The 200 metric tons to be sold by Russia is believed to be just about enough to "load" and resupply the reactor, which will provide power to a large area of northwest India.

Canada halted nuclear sales to India after the 1974 explosion and made the cutoff permanent this May after two years of unsuccessful negotiations on anti-bomb assurances. Among other things, Canada wanted India to place all its nuclear facilities under inspection by the IAEA.

The Soviet proposal at last month's London meeting would require a state without nuclear arms to open all its atomic facilities to international safeguards as a condition of future purchases. According to State Department officials, the U.S. favors such a plan in principle if other countries agree to abide by it.

Squatters Leave Farms in Mexico As Police Watch

CULIACAN, Mexico, Dec. 8 (AP).—Sinaloa state police supervised the withdrawal of peasant invaders from private farms yesterday, but landowners reported resistance from several groups of squatters.

Reports from state officials and landowners indicated that about 20 of 80 peasant groups had suspended their demonstrations in the northern half of the state.

"The peaceful withdrawal began today without any violent incidents," Sergio Herrera y Cairo, assistant attorney general and chief of state security forces, said yesterday.

He said his policemen would continue to move peasants off the land today and warned that squatters who move back onto private farms would face "more drastic action."

Two farmowners, reported that several groups of peasants entered their property in the Guasave Valley yesterday and seized five tractors.

Between 3,000 and 9,000 landless peasants occupied about 100,000 acres on private estates last week, demanding that the government give them land. They charge that the owners are violating the constitutional provision that limits individual landholdings to 250 acres. The occupation nearly paralysed work on the rich vegetable and grain farms in the Guasave, El Fuerte and El Carrizo Valleys.

Giscard Back in Paris

PARIS, Dec. 8 (UPI).—President Valéry Giscard d'Estaing arrived in Paris today following an official visit to Yugoslavia.

France Reducing Value-Added Tax To 17.6% From 20

PARIS, Dec. 8 (Reuters).—The government today announced that the value-added tax will be cut from 20 per cent to 17.6 per cent on Jan. 1.

The reduction, which affects most industrial products, will cost the government 8 billion francs ($1.6 billion) in lost revenue next year.

A communiqué said the move would bring French VAT rates more into line with those of other Common Market countries.

Deputy Finance Minister Michel Durafour told the Cabinet that although the cut in the VAT was not a remedy for price increases, it should help support the current price freeze until the end of the month.

Prime Minister Raymond Barre said in September that the VAT would be reduced to 17.6 per cent as part of his fight against inflation.

The government also announced measures to reduce unemployment, which officially totals 1 million. A spokesman said the state would publish a monthly list of job offers by region and by profession. It will also extend the benefits of apprenticeship contracts and of credits to firms that create new jobs.

Europe Court Upholds Danish Sex Education

STRASBOURG, Dec. 8 (UPI).—The European Court of Human Rights has ruled that Danish parents cannot ask for their children to be exempted from compulsory sex education in state-run schools.

The court said that the lessons on sex "in no way amount to an attempt at indoctrination aimed at advocating a specific kind of sexual behavior and do not affect the right of parents to enlighten and advise their children."

Man Shot in Attempt To Flee East Germany

FRANKFURT, Dec. 8 (UPI).—A man apparently trying to flee to the West was shot on the East-West German border early today, possibly by a booby trap, West German border police reported.

Police said they heard a shot followed by a man's cry, "Help, I am dying. Let me across." Later they saw East German border guards carry a man to an automobile.

Vast Networks of Air-Raid Shelters Tunnel Under the Major Cities of China

By Drew Middleton

DAIREN, China (NYT).—With a confident smile, the hotel manager pushed a button. The wooden floor of the rather dingy room slid aside revealing an entrance to the tunnels of Dairen, which are more than 60,000 meters long and can shelter 50,000 persons from air attack.

The tunnels—they are really massive air-raid shelters—are matched by similar systems in both Peking, Shenyang and other major cities and by smaller systems beneath farming communities. This correspondent, who is on a three-week tour of the armed forces at the invitation of the Defense and Foreign Ministries, walked for 45 minutes in the main tunnel beneath Dairen without retracing a step.

The construction, begun as a precaution against possible Soviet attack, is part of China's huge military defense effort, which includes an armed militia of more than 5 million that staffs anti-aircraft defenses and provides a trained reservoir for the People's Liberation Army.

The feud with the Soviet Union is China's major strategic preoccupation. Military and civilian officials, while critical of the Soviet military presence in South Asia, which they term an occupation, are believed by foreign diplomats to be satisfied that the Americans there offer at least a partial counter to Soviet ambitions in the northwestern corner of the Pacific.

Camranh Bay Facilities

The end of the Vietnam war has left China with no fears of U.S. operations in southeast Asia, but another problem has arisen there. The Chinese are apparently worried over the possibility—they rate it no higher than that in public—that the Indians will strike a bargain with Vietnam, exchanging material aid for the use of Camranh Bay and its airport.

As for the Chinese strategic view of Japan, it is ambiguous. While the national memory rejects further Japanese rearmament, Chinese officials are aware that the United States is dissatisfied with Japanese defenses, particularly anti-submarine and anti-aircraft techniques. The officials turn aside questions on the expanded Japanese defense effort but foreign sources believe that, granted China's control over the Soviet Union, it would reluctantly accept such expansion.

India, with which China was involved in a frontier conflict in the early 1960s, no longer seems to worry the Chinese. They supply arms and give political support to Pakistan, however.

Discussing the shelters, Liu Wen-lin, the Foreign Ministry's representative in Dairen, said the facilities there and others had been dug in obedience to Chairman Mao Tse-tung's dictum after the fighting with the Russians at the Ussuri River border in 1969. His advice, endlessly repeated, was to dig deep tunnels, store grain everywhere and avoid seeking hegemony over others.

Province of China

The third admonition, Chinese officials invariably emphasize, does not extend to Taiwan, which they regard as a province of China whose future is to be settled by them alone.

The Dairen tunnel is a result of the labor of 500,000 workers, the vast majority volunteers from factories and shops and from agricultural communes on the outskirts.

In the first section of the tunnels, built in 1970, the walkway is four feet across, the ceiling seven feet high. The lighting is bright in the main passage but dimmer in side passages that lead to reservoirs, ammunition dumps and first-aid posts.

Musical accompaniment is provided by a soprano's voice transmitted by a closed-circuit system; when she flats, which is often, even the solemn Chinese guides wince.

"There is an Alice-in-Wonderland air about the place, but it is not for children. Mr. Liu indicates weapon slits—angled into the wall—"a machine gun there, a rifleman to back up the machine gun over there."

There are six reservoirs and large silos for wheat and rice. Passages lead to decontamination centers for use after nuclear or gas attacks and to clinics, schoolrooms, kitchens, machine shops, dormitories and assembly halls. Ventilators pump in fresh air and machines keep it reasonably fresh.

In an emergency, the officials said, the shelter could be filled within 10 minutes. Should hostile attacks continue, they said, war production could be carried on by small factories in the tunnels.

At Shenyang, the electrical-equipment works displayed underground power stations that were being built for installation in tunnel systems. These are smaller than the normal stations but were said to have about the same capacity.

The tunnels' exits, the officials said, lead to the hills around the city, where those who escape would "carry on the people's war against the invaders."

Red Guards' School

Defense of the tunnels would rest on militiamen firing rifles and machine guns from pillboxes set in the walls at almost every passage turning. The militia have improvised other defenses, among them a wide-bladed propeller set in the passage that looked as though one hand grenade would demolish it and steel mats studded with three-inch spikes.

Smaller tunnels have been built under schools and apartment houses through northeastern and eastern China. That at the Red Guards' school on the outskirts of Dairen had been carved out of the hillside to a length of 1,600 yards, with space for seven classrooms accommodating 80 pupils each, a clinic, toilets and showers and a decontamination room.

Even farther into the hills that ring Dairen to landward, the Chinese have built what they call the department store tunnel—a wide, crescent-shaped excavation stocked with food, clothing, bicycles, radios, even toys.

Sales people stood behind the counters, but there was a grotesque artificiality about the scene. In war, the toys and bicycles would no doubt give way to food, water and ammunition and field hospitals.

The Chinese insist that the tunnels would be safe against air attack. The main shelter area in the center of Dairen is 7 to 30 yards below the surface and in many places has been cut through solid rock.

Nuclear attack and the consequent radiation would raise serious problems, the officials conceded. Steel doors have been built in some areas to keep out radiation. Gas masks produced by local industry would be available in the event of chemical attack.

The Chinese assumption is that those remaining in the tunnels would carry on local government, produce spare parts and ammunition for the military and maintain communication with other tunnel communities. Success, they concede, rests on the capability of the militia, a force without parallel in other major military powers.

100 Million in Militia

Wu Hsiu-chan, deputy chief of the general staff of the Defense Ministry, asserted: "We have more than 100 million militia. We can say for certain that the equipment for the present militia is better than in the past. At present the militia is getting quite enough ammunition. There lies the source of our strength."

The effectiveness of the militia's manpower and weapons depends on the kind of war initiated. The militia would be important, even decisive, in the event of full-scale invasion; its effectiveness in a long-range war focused on key frontier areas would be less.

Every industrial plant, light industrial factory and farming commune supports a militia formation. Those paraded for a foreign visitor, ranging from teen-agers in a high school to army-directed formations in a textile machinery factory in Shanghai, displayed what appeared to be a high level of basic training and an acute shortage of modern weapons.

The factory boasted a 3,000-man militia unit with 1,200 in the "basic," or highly trained segment. Clad in blue coveral's and bamboo hard hats, 32 of the basic militia, about a third of them women, were assembled to demonstrate their ability to defend the factory, under a veteran regular soldier's command. All were armed with semi-automatic rifles with fixed bayonets and went through bayonet drill with seeming enjoyment.

At Dairen and Nanking, children of 10 to 12 conducted the same type of exercise. They do so, the visitor surmises, only because the high command believes that, in a war, the ultimate combat will be on a one-on-one basis.

When a whistle blew in the Shanghai factory, the militia rushed to the anti-aircraft guns nearby. The covers were torn off and the sights adjusted, and a hail of fire was directed at balloons. Extra militia, those less trained, kneeled and added their rifle fire to the general clamor.

Training Each Week

The militia at this factory do one to two hours of training a week. Their weapons were clean and they were alert. Although the gunners seemed to believe that their weapons were the best available, the quadruple-mount heavy machine guns they were firing are primitive compared with U.S. and Soviet weapons.

The officers said the guns could fire 660 rounds a minute in action—a barely adequate rate against modern aircraft if—it is a big if—there is adequate warning and radar tracking.

The officer who commanded the unit said that no radar was available and that information on an enemy's flight course would come from a central headquarters in Shanghai. Soviet fighter-bombers, he indicated with his hand, would come in at low level.

Did he expect to knock down fighters strafing at 600 miles an hour without radar sighting for his machine guns? He shrugged and said that he knew that surface-to-air missiles would be more effective but that, for the present, the factory's defense would have to rest on the guns deployed.

'Lessons of Mao'

His forces, he said, are well trained in marksmanship, grenade-throwing and bayonet drill, and they know the precautions in a nuclear attack. "We drill in anti-nuclear and anti-gas warfare, in first aid and in emergency repairs," he said. "We have studied the lessons of Chairman Mao Tse-tung and we are prepared and self-sufficient."

The militia also receives lengthy ideological instruction on the achievements in the wars against the Japanese and the Chinese Nationalists. "The young people must be reminded of the sacrifices of their fathers and mothers—they must not forget what the individual can do," a militia instructor said.

What remains unclear is how China would counter air and missile attacks without extensive radar and without a practical communications system that embraces both the regular forces and the militia.

In this context, commanders in factories and in agricultural communes left unanswered the question whether the militia effort was partly for show. Its ultimate value would presumably be in the event of a mass invasion.

"Look, this fire port commands the well and this the pigsty where the invaders will surely go," an elderly veteran said in a village south of Peking.

What happens, he was asked, if there are no invaders, no tanks to be booby trapped, no sentries to be killed? He shrugged his shoulders, for that would be a kind of war outside his experience, but then he brightened and said: "They must fight our way. They cannot conquer China without mass invasion. If they do, we will return to our tunnels and defeat them as we defeated the Japanese and the Nationalists."

U.S. Navy Is Testing Sea Lions As Retrievers of Lost Rockets

NORFOLK, Va., Dec. 8 (UPI).—The Navy is considering using sea lions as a substitute for divers to recover test weapons from the bottom of the ocean.

Phil Villa-Lobos, a spokesman for Norfolk's Little Creek amphibious base, said last week three sea lions from California had been used successfully to retrieve a $50,000 anti-submarine test rocket.

Navy divers can go to a depth of between 150 and 200 feet to retrieve rockets. Mr. Villa-Lobos said the sea lions are capabl of going twice as deep. The animals are faster and less expensive than human divers, he said.

"Any time you can use an animal to do something a person would do and you're not putting a person's life in jeopardy, it's a good thing," he said.

Before the sea lions dive, a "grabber" device that looks like a pair of ice tongs is attached to them and a line is attached to the grabber.

The test rockets make a sharp noise when they hit bottom and the sound is picked up by Navy men on the surface who then send the animals underwater to find the rockets.

The animals place the grabber next to the rocket's fin, Mr. Villa-Lobos said, and it automatically snaps into place around the weapon. The sea lion then returns to the surface for a reward and the sailors haul up the rocket on the line.

Quebec Leader Emphasizes His Separatist Views

OTTAWA, Dec. 8 (UPI).—Quebec Province's new Parti Québécois government, in its first official encounter with the federal government here, promised cooperation with the rest of Canada but emphasized its separatist philosophy.

"We're not out to destroy, but to construct," Quebec's minister of intergovernment affairs, Claude Morin, said in a speech Monday at the opening of the federal-provincial meeting of finance ministers.

"It would be dangerous to hold the illusion that nothing has changed in Quebec, and that one government has simply replaced another one," he said. "There has been a change in Quebec and the election confirmed it."

Mr. Morin said that although the provincial government was elected as a "separatist" party, the fact was that "there was a general dissatisfaction" with the earlier government, which had no significance to Canadian federalism.

He said that the Parti Québécois, which ousted the Liberal party in the November provincial election, looked forward to an "active and lively dialogue" during the finance ministers' two-day conference. Provincial finance ministers are seeking new fiscal arrangements with the federal government.

Russia to Give Push To Tourist Industry

MILAN, Dec. 8 (UPI).—Soviet Tourism Minister Sergei Nikitin said that his country will spend $6 billion over the next 15 years to turn the Soviet Union into a prime tourist attraction.

Mr. Nikitin, here to meet his Italian counterpart, Dario Antoniozzi, said: "In the next 10 years, the Soviet Union will be in the forefront of international tourism." He announced a plan to build hotels, camping grounds, tourist villages and service stations.

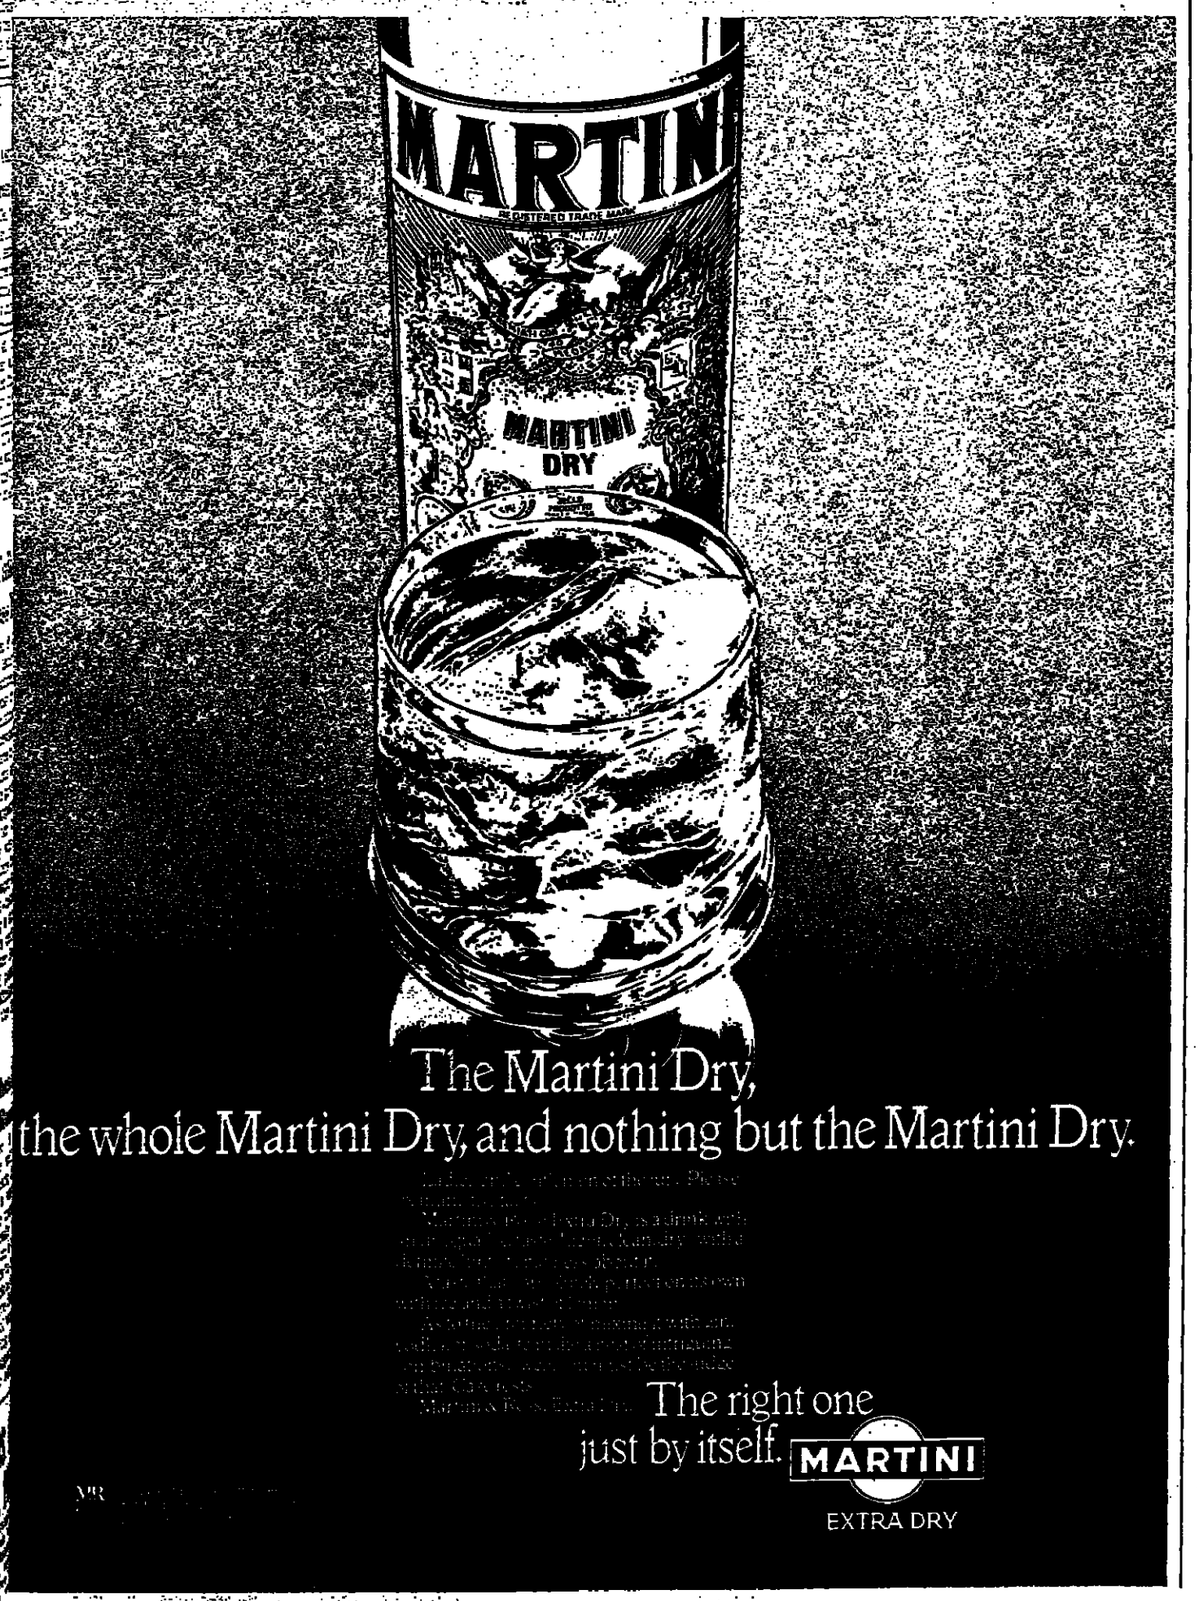
New Swiss President

BERN, Dec. 8 (Reuters).—The Swiss Parliament today elected Justice and Police Minister Kurt Furgler, 52, to be the Swiss President for 1977.

African Republic Becomes Empire

N'DJAMENA, Chad, Dec. 8 (Reuters).—The Central African Republic has proclaimed itself an empire. Its radio hailed Sallah Bokassa, who has been President since 1966, as its first Emperor. He was formerly known as Jean Bedel Bokassa.

The broadcast on Saturday said the former French colony, which gained independence in 1960, would now be called the Central African Empire.



The change was embodied in a new Constitution, adopted by a special congress of the country's only political party, Mesan Renove (Movement for the Social Evolution of Black Africa), the radio added. It said: "Long live Bokassa the First, Central African Emperor."

Japan Votes, Uneasily

The Japanese election puts one more country on the long list of those where the government is getting weaker as the economic choices get harder. The Liberal Democratic party, in office continuously since it was formed more than two decades ago, has now lost its parliamentary majority for the first time. Through the hasty expedient of signing up a handful of independents, it is managing to keep itself in power. But it has suffered a severe erosion of its authority and the government plans to resign.

The odd thing about the election is that, while the Liberal Democrats were clearly the losers, it is hard to see any winner. On the far left the Communists lost more than half of their seats. The Socialists, the second largest of Japan's parties, gained marginally—but they still have fewer than half as many seats as the Liberal Democrats. Though the Liberal Democrats' standing has been slowly diminishing for years, it continues to dominate Japanese politics in the face of a badly scattered and fragmented opposition.

* * *

Like all the others among the rich industrial nations, Japan now has to deal with urgent issues of foreign economic policy. In response to the recession and the strain of paying for its enormous oil imports, Japan has now mounted an astoundingly effective export drive. It is generating vast surpluses in its trade with both Europe and the United States The European Common Market has already protested and begun to take counteraction. The United States is more tolerant of this imbalance, seeing in the influx of highly competitive Japanese goods a powerful force to restrain domestic inflation. But this country's imports from Japan have recently been running about $6 billion a year more than our exports to Japan—a disparity that no one considers to be sustainable over any prolonged period.

The basic reason for Japan's present emphasis on exports is simply that domestic demand there has still not recovered from the recession. But most of the other industrial countries have very similar troubles of their own, and they are not greatly inclined to help Japan at their own expense. Throughout Western European politics there is a general pattern of hair-line majorities in some parliaments and minority governments in others It is, you might say, the political expression of public indecision leaving European governments, like Japan's, with no solid base for sustained leadership In Europe as in Japan, there is now the unaccustomed prospect of high unemployment for the indefinite future

One of the curiosities of postwar politics was the tacit decision of all three of the defeated nations to turn their public life over to the forces of the democratic right, which continued to rule serenely through election after election The pattern of one-party democracy broke down first in West Germany. It turned to a vigorous two-party system, you might speculate, under the pressure of East German infantry on its border and Soviet tanks in Berlin. But in the other two countries—Italy behind its mountains, and Japan behind its seas—government continues to be carried on among the highly intricate factional alliances within one large and dominant conservative party.

For two countries of totally different cultures, the parallels between Italy and Japan are striking. The ruling parties in both countries have been losing strength because of the very processes of rapid economic growth that they fostered. Population in both has been flowing from the rural countryside to the cities; the shopkeepers are fewer, and the corporations are bigger.

* * *

Both Japan and Italy cherish consensus. The arithmetic of parliamentary seats means less there than in a country like, say, Britain, with an aggressively adversary tradition. As they are currently demonstrating, governments in both Japan and Italy can continue steadily in office despite election results that, elsewhere, would prove fatal. But, unhappily, there is still another similarity. While both of these governments were originally established under the aegis of the United States, both have now been poisoned and weakened by the Lockheed scandals—which also came to them from the United States.

Japan's Premier, Takeo Miki, is expected to resign as the result of Sunday's defeat. For the past year he has been working to expose and prosecute the Japanese principals in the Lockheed affair. The rest of the party's leaders have repeatedly attempted to remove him as a menace to unity. Now they will succeed, probably replacing him with his old rival, Takeo Fukuda. That will re-establish consensus. But it is not likely to give Japan a government whose strength is commensurate with the country's imposing economic power.

THE WASHINGTON POST.

Energizing Energy Policy

There's a move afoot to shut down the Joint Committee on Atomic Energy. We hope, not without a tinge of regret, that it succeeds. In its early times this 30-year-old congressional panel performed worthily in guiding the nuclear-weapons program and fostering a private nuclear-power industry. It was sailing in an uncharted sea, and it did so with a sure and responsible hand at the tiller. Its fault was that it clung too long and hard to an almost missionary conception of the role of nuclear power. It did not keep up with rising anxieties about safety, wastes and proliferation or, indeed, with the new equations of energy "shortages". And it became autocratic in style.

Thus did the Joint Committee on Atomic Energy lose the deference that legislators commonly—too commonly—show for each other's failings. In the last few years, others in Congress have repeatedly scuttled the committee's bills and struggled against its obstruction of nuclear legislation originating anywhere else. A substantial majority now seems prepared to put out of its misery a committee that has been enfeebled by a slew of resignations, election defeats and other political accidents.

The Democratic Caucus is expected to parcel out the committee's jurisdiction among four other committees. The new Senate will soon consider a proposal to fold atomic energy into a new energy and natural resources committee. Both approaches are sound.

The Congress, however, has a great deal more to do in the way of reorganizing to improve its own policy-making capacity in nuclear affairs, not to speak of energy affairs as a whole. Some 18 other committees already have a piece of the nuclear-power action, for instance. The Senate may be headed toward the more comprehensive structure of an energy and natural resources panel. But the House, where no similar reorganization effort is evident, is taking the opposite tack: In handing over atomic energy's functions to four other committees, it would be dispersing responsibility for nuclear policy. This is what lends superficial appeal to a rear-guard action to give atomic energy a new and broader life as a joint energy committee. Given the proven flaws of this committee in particular and of the joint legislative committee as a species, this is a poor idea. But it is a response, if an inadequate one, to a widely perceived need for more efficient congressional policy-making in this field.

President-elect Carter has promised to make executive reorganization, starting with energy, his first domestic priority. Whether it's politically wise for him to feel he must make good at once on this particular campaign pledge may be debatable. More to the point here, however, is that he must relate his reorganization plans, tactically and substantively, to those of Congress. It's no easy task to organize either branch to deal with energy But for either to proceed without due respect for the other can only make trouble. With both branches controlled by the same party, collaboration between the two should be possible. At the least, it should be tried.

In brief, it's not enough simply to write off the Joint Committee on Atomic Energy. Its prospective demise should be regarded as part of a process of energising, if you will, the making of energy policy—a process that still has far to go.

THE WASHINGTON POST.

International Opinion

Opportunity for Vance

By nominating Cyrus Vance as secretary of state, Mr. Carter has signaled that American foreign policy is to undergo a change of style but not of fundamental substance. He has chosen a tough, able and experienced man from the East Coast Establishment, so that allies and adversaries can now be assured that Mr. Carter's own lack of experience in foreign affairs will be balanced by a steady hand at the State Department. Against this, Mr. Vance has around his neck the albatross of his long support for the Vietnam war . . . He also has the lesser disadvantage of being relatively unfamiliar with the Third World and its related economic problems, which are going to play a larger role in American foreign policy. Neither of these disadvantages need be too damaging. He is a sufficiently fair-minded man to have few firm enemies, and he is sufficiently able to adapt to the new and very different challenges he now faces . . .

—From the Times (London).

In the International Edition

Seventy-Five Years Ago

December 9, 1901.

BUENOS AIRES.—A dispatch from Santiago de Chile announces that the Chilean Secretary for Foreign Affairs and the Argentinian Minister have settled the pathways incident. It has also been resolved that the Chilean claims about the alleged invasion of the Ultima Esperanza shall be settled after the reception of a report on the matter. The danger of a conflict has therefore disappeared.

Fifty Years Ago

December 9, 1926.

NEW YORK.—A second and more fruitful arms conference at Geneva was predicted by Rear Admiral Henry P. Jones USN, who returned recently on the United States liner George Washington. "At the conference just held," said Adm. Jones, "all the delegates put their cards on the table. The ground has been prepared for a final and more satisfactory conference. It will probably be held next year."

A Fresh U.S. Look at Europe

By C. L. Sulzberger

BRUSSELS.—Jimmy Carter's designation of Cyrus Vance as the next U.S. secretary of state is taken as an excellent sign by Western Europe. Although it has been successively dazzled, amused and occasionally bewildered by Henry Kissinger's diplomatic brilliance, it has not always been thoroughly convinced of his benevolent intentions to the cause of European unity.

Indeed, he has on occasion confided to intimates a skepticism concerning Carter's assertions that the United States should promote European unity. Sometimes Kissinger doubts whether Washington could effectively do so, and other times he wonders whether it should.

Such ups and downs are explicable as tactical maneuvers rather than fundamental attitudes. Washington has apparently feared the possibility that such organizations as the European Program Group, which met this year in Rome to discuss cooperation of Europe's defense industries, might cooperate at the expense of U.S. interests.

Known in Europe

Quite a few statesmen from the European Community already know Vance personally. He has spent some time in the general NATO area, as a Vietnam peace negotiator in Paris and as a Cyprus mediator between Greece and Turkey. He is well regarded as sympathetic to the Atlantic Alliance as well as the EEC.

The community is determined to strengthen its position as a world force while at the same time doing its utmost to work with the United States on the closest terms. Sir Christopher Soames, who retires next month as EEC commissioner for external relations (foreign minister for "Europe"), has this to say:

"Inevitably there was bound to be a certain schizophrenic line in Washington. The United States genuinely wanted to see West Europe get stronger and better organized, thereby more able to look after itself and share common burdens. Not only the military burden in NATO but supporting our general Western concept of a way of life.

"Therefore Washington essentially feels that a strong 'Europe' is good news. But this 'Europe's' interests cannot be the same as those of the United States except in the broad sweep of things. Differences on agriculture are an example of what hits one in the face when one gets to lesser fields."

Looking back on his four years in this job, Soames acknowledges that, thanks partly to world economic problems and the intermittent energy crisis, the EEC is still less "cohesive" than he would have wished. Yet he stresses its increasingly important influence. "Europe's 250 million people now run 20 per cent of the world's trade outside the EEC's own frontiers," he adds.

Ties With Asia

China has recognized the EEC and accredited an ambassador. Soames hopes there will be an eventual Sino-European commercial accord. The community's trade is increasing with the Indian subcontinent, East and Southeast Asia, Africa and North America. "We have become a personality on the world scene," he claims.

"EEC has notably increased its stature during the past four years even if it is still far from achieving its fundamental goals. It did a great deal for Portugal during that country's post-dictatorship crisis. It is now eagerly wooed by Spain. It has been most helpful to Greece since democracy regained power there.

"It is gaining importance for Turkey and Yugoslavia, with which we have just signed an economic cooperation accord. Greece has applied for full membership, now being negotiated. Turkey has not yet made such application but we will have a new association agreement within three months."

Testimonial

Perhaps the greatest testimonial to "Europe's" progress is in the stalemated proposal from Moscow's Comecon group of East European Communist nations that it should deal directly with the EEC as a bloc. The EEC refused because Comecon is dominated by the Soviet Union, its overwhelmingly No. 1 member. The EEC is in no sense dominated by the United States, which is not a member and with which it often has disagreements.

The European Community merely suggested to Comecon that if any of its members wanted commercial deals, they should feel free to do so bilaterally between each applicant and the EEC, thus avoiding Soviet attempts to put pressure on individual Comecon countries seeking to improve their own trade with the West.

The story of "Europe's" wavering but steady rise is undramatic and far from glamorous. But it exists. And the nine present members of the club, plus the list of those who hope to apply, all hope there will now be more clear-cut, steadfast U.S. support for this new body than has always been evident in the recent past.

Letters

Another 'Gap'?

In his article "Kremlin Expects an Initiative From Carter" (IHT, Nov. 25), Victor Zorza quite aptly recalls the "missile gap" between the Soviet Union and the United States inspired in the 1960s and the negative consequences of "overcoming" it. I should like to add that still earlier—in 1956—the United States also "invented" the "bomber gap" which led to an accelerated program of building U.S bombers. And this "gap," as the U.S. administration officially admitted later, did not exist either: the United States had at that time four to five times more bombers than the Soviet Union.

Now, as you listen to some Western politicians and military leaders, you have the impression that some people find it profitable to prove the existence of a "gap" in the armed forces and armaments in Europe in favor of the Soviet Union. In that way the new U.S. administration and its allies are being called to start another spiral in the arms race in Europe. It is easy to imagine that versions about such "gaps," even those that are later refuted by their own inventors, may only lead to a continuation of the "action-reaction cycle" in the armaments race.

VLADIMIR BRODETSKY,
Novosti Press Agency.
Moscow.

Harness the Wind

When talking about energy (apart from oil), some people suggest the use of the sun (a very expensive device), but no attention is paid to the use of the wind. Wind is a powerful element for producing energy at the cheapest cost. When properly harnessed, it can reduce the consumption of oil, it could even contribute to a reduction in the price of oil.

Diplomatic Critic

As for the tax rises for Americans abroad:

Doesn't anyone question the virtually unlimited privileges of the U.S. diplomatic corps abroad?

Fellow taxpayers, that's our money they're thriving on.

SANDRA ROGERS MAKSUD.
Ferney-Voltaire, France.

Harry Debelius From Madrid:

After a new Cortes has been elected next year, how close will Spain be to a Western European style of democracy?

MADRID—With the Spanish referendum only days away, it is time to ask the question: After a new Cortes (parliament) has been elected next year, how close will Spain be to a Western European style of democracy?

The answer, barring some abrupt change, is: closer in spirit than in legal framework but moving in that direction.

The referendum next Wednesday will simply ask Spaniards if they approve the proposal for "democratic reform" which would give the country a two-chamber parliament elected by direct suffrage, to replace the current largely appointed Cortes which was bequeathed to Spain by the late Generalissimo Francisco Franco. It is a foregone conclusion that the vote will be overwhelmingly affirmative in spite of a boycott threat from the left and a "Vote No" campaign by the far right. But to make doubly sure, the government of Premier Adolfo Suarez is spending $10 million of the taxpayers' money on an advertising campaign telling them to vote "yes," just as Gen. Franco did in 1966 on the law of succession

Approval of the referendum will not bring instant democracy. For one thing, the representational structure of the legislature to be elected is weighted in favor of conservatives and rural areas as opposed to heavily populated industrial centers. For another, the refusal so far of the Premier to recognize the Communist party before the elections presents a major obstacle for talks with leftist opposition parties.

A Possibility

Putting those questions aside for the moment, consider the possibility that there might not even be a new post-election government. As the law stands, Premier Suarez is under no obligation to resign following the elections. His mandate is for five years. It is not inconceivable, if circumstances limit King Juan Carlos's choice of a premier, that Mr. Suarez might be asked to stay on.

In any case, the King alone cannot appoint a premier. He must pick from a list of three candidates drawn up by the powerful Council of the Realm. It is theoretically possible for the Council to keep the name of the parliamentary majority leader off the short list.

Nevertheless, it is probable that the Council will be in the King's pocket. The reason is that the composition of the Council must be changed when the parliamentary structure is changed. Where, for example, as the Organic Law states, could one find "the highest ranking prelate, with the most seniority, among those who are members of Cortes"?

The proposed composition the new Council of the Re includes an equal number members elected from the Se and from the congress by respective chambers. The will name the president Cortes (the overall lead chambers) and the m the Council of the R addition, one-fifth of bers of the Senate wi pointed by the King. likely that the King's men dominate the Council of Realm.

Into High Gear

It is widely anticipated the succinct wording of the erendum, asking the citizens approve "democratic reform," be used by the government pretext to shift into high in making changes once all "Si" votes have been coun One of the first things the ernment is expected to do i eliminate the requirement political parties to register seek government approval be being allowed to participate elections.

The Suarez government deliberately postponed the hi important municipal electi previously expected to take p last month. The chances are Mr. Suarez put them off not because he had his hands but also because they would widely sneered at as long virtually every party to the of the center remains illegal hence ineligible to present didates.

When those elections will place, nobody knows.

Electing Governors

As for electing provin governors, Spain's leaders just not got around to that The powerful governors still appointed by the cen government, and the present may remain in office—with sible prejudice to the fair of the parliamentary electio until after the new parlia comes in. Still, it is known changes in the law in this re are high on the priority lis the King's present governm

Evolution is undeniably a r tedious process than revolu but it is also more prudent any case—given the assump that the King wants a democ Spain—it is clear that he ha choice but to accept the Fr system as one which was la constituted. If he had challe the origins and legality of system, as the opposition would have placed in d the presence and legality of monarchy itself. After all, Franco overthrew a republic, a Kingdom.

Getting a Handle on the Mideas

By Joseph Kraft

WASHINGTON—A push, not to say rush, is under way in all quarters for a new go at settlement in the Near East. But the incoming administration needs to sort out possibilities and analyze proposals.

The best way to buy the time is not the usual device of sending abroad a prestigious emissary. A far better way to get a handle on the Near East is to bring here to Washington, for separate meetings with Mr. Carter and his aides, the leaders of Israel and the three neighboring Arab states.

The most visible mover behind the new momentum for settlement is President Anwar Sadat of Egypt. No U.S. senator, congressman or journalist has been to Cairo recently without getting an earful of Mr. Sadat's eagerness to resume peace negotiations through a Geneva conference. Nor does the Egyptian President mince words about his readiness to "end the state of war" in return for Israeli concessions of occupied territory to Egypt; other Arab states and the Palestinians.

View of Assad

President Hafez Assad of Syria, once a prime obstacle to further peace moves, has now changed his position. In return for Egyptian approval of Syria's virtual occupation of Lebanon, he is no longer opposing Mr. Sadat's initiative for peace. As he put it to me in a rare interview last week: "I am not saying the time is not right for settlement."

King Hussein of Jordan, Israel's third Arab neighbor, has favored talks at all times. With neither Egypt nor Syria now barring the way, he can be more forthcoming than ever in expressing his interest in a settlement.

Perhaps the biggest change has been in Israel. After a brief spell of sour comment on the Egyptian initiatives, Premier Yitzhak Rabin has gone onto the peace offensive himself. While some believe he has turned about only for propaganda reasons, my strong impression is that the play of internal politics preceding the election due next year forces him to come out as a leader who can bring the settlement most Israelis want.

Whatever the sincerity of these various professions of interest in settlement, no one in his right mind would want to let the opportunity slip away untested. The United States in particular, as the power all countries in the area now look to for diplomatic leadership, has a special interest in maintaining momentum toward settlement.

The temptation is to follow the precedent set by William Scranton for President Nixon in 1968 of exploring possibilities through the agency of a high-ranking traveling emissary. But a visiting dignitary is bound to raise false hopes either among Israelis or Arabs. Moreover, after the mission, it becomes incumbent upon the United States to come forward with proposals. The monkey is on Washington's back.

But the Carter administration, unless it wants to spoil the present opportunity, ought to leave the initiative for new proposals with the local parties for some time to come. There is a great deal of ambiguity in what is now being said, and there ought not to be a U.S. response until after the new President and his chief aides have had a chance to probe exactly what the local leaders have in mind.

Mr. Sadat, for example, is cloudy to the point of b deceptive in his talk of "an to the state of war." Presi Assad is a quantity almost known to all Americans ex Secretary of State Henry singer; indeed, Mr. Assad m a joking reference to that dition by observing to me he was the "only Arab leader spoke English with a German cent."

Though King Hussein and Rabin are well known in W ington, both ought to be q tioned closely on specific mat It is unclear to what degree King could act as a cover bridging Palestinian represe tives to the negotiating table; also what relation Jordan m have with a Palestinian state is equally unclear how much for political maneuver Mr. H has—particularly on return territories—with an election ing up.

By inviting all four leader Washington for separate m ings at an early date, Presi Carter keeps up the momen for settlement. He reserves himself and his aides the sibility of discovering first-h the true postures of leaders for internal-political reasons, to mask their views. At the time he keeps what the States most needs before forward with proposals mind.

Kadar Says Eurocommunism Is Not a New Anti-Sovietism

By Paul Hofmann

VIENNA, Dec. 8 (NYT).—Hungarian Communist leader Janos Kadar said yesterday that he did not share the view that Eurocommunism was a new form of anti-Sovietism.

Mr. Kadar, reputed to be the most popular Communist party chief in Eastern Europe, made what sounded like a cautious opening to liberal currents in the Communist movements of Italy, France and Spain during a news conference here.

The 64-year-old leader, who came to power when Soviet forces crushed the uprising in his country 20 years ago, is not known to have ever publicly answered the questions of reporters in a Western country before.

Mr. Kadar's hourlong news conference at the Hungarian Embassy came before the end of a two-day official visit to Austria.

Autonomist Tendencies

The question about Eurocommunism was asked by an Italian newsman who referred to a recent magazine article by Todor Zhivkov, Bulgaria's Communist party chief, denouncing the autonomist tendencies in various Communist parties in southern and Western Europe as hostile to Moscow.

Mr. Kadar's reply was brief: "I don't share this view."

An Austrian journalist wanted to know why Soviet troops were still stationed in Hungary even though the country was not threatened by any of its neighbors.

Mr. Kadar said that the presence of Soviet forces in his country depended on "the general situation of world politics," and he expressed the hope that all foreign troops stationed in various European nations may eventually be withdrawn by common accord.

Questioned about possible cooperation between Communist and Socialist or Social Democratic parties, Mr. Kadar observed that their relationship was "no simple one," but that contacts were useful and that "the interests of peoples" must be put above party interests.

The Hungarian leader pointed to the "good atmosphere" of his talks with Bruno Kreisky, the Socialist Premier of Austria, as an example of ideological coexistence.

Broader Results

Repeatedly, Mr. Kadar praised the results of least year's East-West conference on security and cooperation in Europe at Helsinki and said that the results must be broadened. The Helsinki parley, he said, was not "an end but a beginning."

The Hungarian leader confirmed that he planned to make a trip to West Germany next year. He said that it was true that his present stay in Vienna was his first official visit to a capitalist country, but that he did not entirely lack first-hand knowledge of the capitalist world.

Mr. Kadar recalled that he visited United Nations headquarters in 1960 and with a smile added: "New York, I regret to say, is not a Socialist metropolis."

The Hungarian leader said that his countrymen were free to travel to Western countries and added that many did. This was a form of political education, Mr. Kadar observed. In the advanced capitalist countries "the fences are not made of sausages" and unemployment and other insecurity were widespread, Mr. Kadar remarked.

Kadar Leaves Vienna

VIENNA, Dec. 8 (AP).—Mr. Kadar left here this morning. He was seen off by Chancellor Kreisky.

Janos Kadar

New Gonorrhea Strain Gains; Type Is Resistant to Penicillin

By Bernard Wideman

MANILA, Dec. 9 (WP).—A new strain of penicillin-resistant gonorrhea is frightening military health officers at the two large U.S. military installations in the Philippines.

The incidence rate for the new strain of VD has been rising among the 15,000 GIs at Clark Air Base, 50 miles north of here, and Subic Bay Naval Base, 60 miles northwest of here, according to an Air Force doctor at Clark.

Six months ago there were no known cases of the new strain, the doctor said, but in the three months from August to October 410 GIs from the two bases contracted it. This is about 15 per cent of all gonorrhea cases reported on the two bases during that period. November figures have not been compiled yet.

Although the new strain, called "beta-lactamase-producer" by the World Health Organization, can be cured by a semisynthetic called trobicin (spectinomycin), both the identification and the treatment of the new strain are costly.

Common gonorrhea can be identified through a smear test, while the new strain requires culturing for identification; penicillin treatment per case for common gonorrhea costs the U.S. government 50 cents, while trobicin treatment costs $3.50.

The new strain first showed up in the United States in April, when a GI who had left Clark a week before was discovered with the disease.

[Dr. Paul Weisner, at the Center for Disease Control in Atlanta, said cases also have been found in New Zealand, Australia, Japan, Korea, Hong Kong, Singapore, Norway, Britain, the United States and Canada. He said it was not possible to estimate the total number of cases in the world. There have been 38 confirmed cases in the United States and more than 70 cases in Liverpool, England, he added.]

In August, the Center for Disease Control, which works with WHO, sent a team here with Philippine government permission. The team tested prostitutes in Olongapo, outside Subic Naval Base; Angeles, outside Clark, and Manila.

Of 2,500 prostitutes checked, about 250 tested positive for gonorrhea, 28 per cent of them the new strain.

Of the 5,000 registered prostitutes in Angeles, only 1,800 receive weekly checkups, according to the city health officer, who said he had no idea how many may have the penicillin-resistant strain of VD because his clinic is not equipped to do cultures. Angeles Mayor Rafael Lazatin bridled at the idea that the new strain is prevalent in his area, saying: "So far there are no cases among the girls here."

U.S. Will Protect New Fishing Zone

SANTA CRUZ DE TENERIFE, Canary Islands, Dec. 8 (AP).—When the United States expands its offshore exclusive-fishing zone to 200 miles next March 1, it will immediately begin to enforce rigidly all rules on fishing within that zone, a State Department official said here today.

Nicholas Schowengardt, of the Office of Fisheries Affairs, said that one reason for the crackdown is that "a voluntary international scheme is not capable of insuring regulations."

He said at a meeting of the International Commission for the Northwest Atlantic Fisheries that, in addition to inspecting foreign fishing vessels for possible violations of commission rules on conservation measures, including catch quotas and mesh sizes, the U.S. authorities will also make arrests for violations. The commission members now only report violations to fishermen's home countries, without arresting the fishermen.

Shah Orders Pardons For 282 Prisoners

TEHRAN, Dec. 8 (UPI).—Two-hundred and eighty-two prisoners sentenced by military tribunals have been pardoned on orders of Shah Mohammed Reza Pahlevi, the Iranian armed forces commander announced.

The pardons were the latest in a series during the year to mark the golden jubilee of the Pahlevi Dynasty founded by the present Shah's father. The announcement said that the prisoners will be released Thursday.

Ethiopia Frees 109

MOSCOW, Dec. 8 (UPI).—Ethiopian authorities have released 109 persons under an amnesty announced by the provisional military government, Tass said in a dispatch from Addis Ababa.

Andreotti Gets Assurances U.S. Will Try to Help Italy

WASHINGTON, Dec. 8 (AP).—Italian Premier Giulio Andreotti is returning home with the Ford administration's promise to do what it can to ease Italy's economic problems. His two-day official visit ended here today.

After a meeting with Mr. Andreotti, Treasury Secretary William Simon said yesterday that the United States would explore ways to provide "tangible" support for Italy's austerity program.

Mr. Simon's statement gave no details, but other officials said U.S. assistance would probably take the form of an emergency fund from which Italy would be authorized to make withdrawals in the event of a currency crisis.

Curbing Speculation

A top U.S. official said the mere existence of the proposed fund would inhibit speculation against the lira.

Mr. Andreotti's visit, which included talks with representatives of both President Ford and President-elect Jimmy Carter, occurred during a crucial period for Italy's five-month-old Christian Democratic government.

Rome is awaiting decisions by the International Monetary Fund on a reported $1-billion loan application and by the oil producers' cartel on a price increase. Italy is among the Western industrialized countries least able to afford a new price increase.

Also pending are labor-management wage talks, which will have a direct bearing on whether Italy will be able to bring down its high inflation rate.

Officials said the U.S. attitude on creation of an emergency fund would be influenced by the IMF decision. In his statement, Mr. Simon suggested that a favorable decision was forthcoming when he said he looked forward to the completion of successful negotiations on the Italian loan bid.

Rhodes Re-Elect Minority Leader

WASHINGTON, Dec. 8 (AP).—Rep. John Rhodes of Arizona won unanimous re-election today as the House minority leader.

Rep. Rhodes was first elected to the leadership post on Dec. 6, 1973, to succeed Gerald Ford when Mr. Ford became Vice-President.

Republicans at a caucus also unanimously re-elected Reps. Robert Michel of Illinois as minority whip and John Anderson of Illinois as caucus chairman.

Thai Guerrillas Kill Policeman, Wound 14

BANGKOK, Dec. 8 (UPI).—Communist guerrillas attacked a police camp 72 miles east of Bangkok with rockets and rifles before dawn yesterday, killing a corporal and wounding 14 other policemen, the Interior Ministry reported today.

It was the closest the Communists have come to Bangkok during the rise in insurgency that began two months ago.

Box D-5,595, Herald Tribune, Paris.

Are you looking for a highly skilled on-site assignment ?

Westinghouse Nuclear Europe has three challenging on-site positions for men with Engineering and Technical expertise. We're looking for the kind of men who can contribute talent and know-how as integral components to the corporation that makes it their business to lead today's world in the marketing, design and construction of the Nuclear facilities on which tomorrow depends.

Welding Engineer ref. 49

Our project site in Spain requires the skills of an engineer with professional qualification in Metallurgy or Welding Technology, as well as thorough written and spoken knowledge of the Spanish language. Total fluency in English is also essential.
The Welding Engineer we select will serve in an advisory capacity to the Customer at the site regarding the welding of Westinghouse-supplied equipment. He will monitor all site welding and NDT operations on Westinghouse equipment; oversee the proper keeping of records and maintenance of documentation; and review customer procedures to assure compliance to the ASME codes and Westinghouse requirements.
The man we seek should have a minimum of five years of practical and theoretical welding application experience behind him, as well as a thorough grasp of ASME codes and NDT processes. He can look forward to a challenging position of responsibility in a progress-oriented work environment.

Special Equipment Technician ref. 38

The Nuclear Power Services Department of Westinghouse Nuclear Europe's Brussels office seeks an experienced fitter technician for possible relocation to a project site in Sweden or Spain.
Excellence in the English language is absolutely essential. Other language abilities are a valuable asset. The applicant of our choice must have at least five years of prior related experience, as well as supervisory ability in dealing with other craft-labor on the erection of Nuclear Steam Supply System equipment.
After initial familiarization, our special equipment technician must be prepared to undertake short-term on-site assignments throughout Europe, where he will supervise the construction of equipment in accordance with Westinghouse specifications.

Start-up Engineer ref. S.U.

We are on the lookout for a Mechanical or Electrical Engineering graduate with, if possible, additional degree training in Reactor Physics. At least five years of solid work experience in design or operations is a mandatory requirement. PWR experience will be considered a positive asset.
The man we select for this challenging spot will assist in the preparation and the review of procedures and the execution of start-up tests of: individual system functional tests, hot functional tests, initial criticality, physics and power raising tests. Following initial training in Europe or U.S.A., our Start-up Engineer must be fully available for assignment to an on-site project in Sweden or Spain. A thorough command of the English language is obligatory. Other languages are a big plus.

Excellent salary terms and attractive fringe benefits are some of the more tangible rewards for candidates who meet the high calibre standards we set as well as the opportunity of stimulating, rewarding work and professional growth through a future-oriented multinational company in the crucial nuclear-energy field.

Please forward applications, mentioning the reference, with full particulars to

Yannick E. Wackens,
Manager Employee Relations,
Westinghouse Nuclear Europe,
rue de Stalle 73,
B-1180 Brussels (Belgium).

Westinghouse Nuclear Europe

ADVERTISING SALES

A leading American publisher has 2 vacancies in its Paris office.

Both positions require extensive travel and excellent French as well as perfect English.
One position is for a very experienced space sales person, the second is for a space sales trainee.
Salaries will be commensurate with experience.

Please address complete resumés with salary history to:

Box D-5,597, Herald Tribune, Paris.

GENERAL MANAGER

Large consumer packaged goods corporation seeks proven General Manager for one of its Spanish-speaking manufacturing facilities. This position is responsible for meeting manufacturing goals, while keeping costs within approved standards and product quality of the highest order. Prior manufacturing experience in a labor-intensive consumer goods industry of 10-15 years with P&L responsibility is a must. Good working knowledge of both Financial and Industrial Relations plant operations is essential. Candidates should have a technical or business administration degree and must be fluent both in Spanish and English.

Respond with resumé and salary history in confidence to:

Box D-5,602, Herald, Paris.

GENERAL MANAGER
GERMANY

Small subsidiary of large U.S. Corporation seeks General Manager. Experience must include sales and distribution to the retail food trade in Germany.

Send resumé including salary history to:

Box D 5,592, Herald, Paris.

MAJOR AMERICAN BROKERAGE HOUSE

Seeks qualified individuals to develop large private clientele

Immediate openings available in London and continental offices. Ideal candidates should have several years experience handling private clients with a European broker or bank. Successful candidates will be provided with an excellent research staff covering most important industries, an active underwriting calendar, a strong commodity department with representatives in each office and an active Euro-bond department in London.

Apply in strictest confidence:

Box 22,778, I.H.T., 21 Cd. Queen St., London WC2.

GENERAL APPOINTMENTS

Frederic R. Harris (Holland) B.V. Consulting Engineers in The Hague require the services of an excellent bilingual

EXECUTIVE SECRETARY

For this position the following requirements should be met:
1. Recognized secretarial training.
2. Excellent command of the French and English languages both written and spoken.
3. Shorthand capability in both languages.
4. Mature personality and free to travel in Europe at any time.

Interested parties are requested to address their detailed application to the personnel manager of

Frederic R. Harris (Holland) B.V., Consulting Engineers,
Badhuisweg 11, The Hague. Tel.: 574111.

International Industrial SALES OPPORTUNITY FAR EAST

If you are familiar with the Far East International Marketplace and experienced in selling through industrial distributors, we would like to talk to you. If your background includes technical or sales experience in the pump industry, it would be a definite plus factor.

You would be joining F. E. MYERS COMPANY, a major manufacturer of water pumps, agricultural sprayers and industrial pumps. We market our products in 83 countries through a professional distributor network.

You'll like the total salary, commission and expense package which accompanies this rewarding sales position. Relocation to the marketing area will be made within the first year. Start by sending your resume and salary history in confidence to:

Myers

George R. McNulty
Director International Sales
F. E. MYERS COMPANY
400 Orange Street
Ashland, Ohio 44805

Fewer responses but...

Executive recruitment advertisements in the International Herald Tribune will not bring you 100-150 curriculum vitae, as in a national daily newspaper . . . they bring in normally between 15 and 30 responses.

Over the past twelve months, however, they provided an average of 4 to 5 candidates who were qualified to hold the job . . . the critical statistic!

The International Herald Tribune asked personnel directors and management consultants to evaluate each of their recruitment advertisements in terms of response, number of qualified candidates and their nationalities. We have assembled this information job by job, category by category, in our "1975-1976 Recruitment Results Report."

The "1975-1976 Recruitment Results Report" will be mailed to any interested recruitment executive (please mention title, company's name), free of charge, by writing to:

John Slater,
Classified Advertising Manager,
International Herald Tribune,
21 Rue de Berri, 75382 Paris Cedex 08.

Backers as Well as Foes Aroused

Criticism of Chile's Junta Mounts

By Jonathan Kandell

SANTIAGO, Dec. 8 (NYT).—Chile is mired in industrial stagnation and runaway inflation, which began in the period of President Salvador Allende and continues under the dictatorship of President Augusto Pinochet.

The economy has not regained production levels of the late 1960s, and living standards for most of the 10 million Chileans continue to drop. Behind a facade of tranquility and order, suffering and despair run deep.

When the military government took power in Chile, it sought to reduce the role of the state in the economy and introduce laissez-faire capitalism, which has never existed here for generations.

Today, three years after the coup that toppled Mr. Allende, the Marxist, the military junta is under fire from both its supporters and opponents. And voices are being raised even among conservative businessmen that the state must intervene to revive the economy.

Almost every other store seems to be advertising a fire sale, and still few customers walk past the window displays. Well-dressed men commute to work on rickety buses that used to transport only laborers and clerks.

In the shantytowns where one-fourth of greater Santiago's 3.5 million people live, women and their unemployed husbands elbow into church-sponsored soup lines that were meant for children.

In the Allende years, state ownership was the yardstick for economic activity. The redistribution of wealth—through price controls and wage increases, disorderly agrarian reform, worker take-overs of factories, and ambitious social welfare programs without financial backing—was carried out even as the production of wealth fell.

Still No Compromise

Under the military, the ideological pendulum has swung almost 180 degrees and there is still no compromise. A full-scale effort has been under way to reduce the state's economic role as investor, creditor, employer, producer and protector. The ideologues at the economic helm insist that no matter what the immediate consequences the economy must be quickly turned over to market forces dominated by supply and demand, private investment and free competition.

But labor leaders, facing huge unemployment and malnutrition among their rank and file, are pleading with the government to resume public investment and decree wage increases. Farmers, whose grain yields have plummeted, are demanding government subsidies for machinery, fertilizers and pesticides.

An even more dramatic turnabout has occurred in the thinking of many industrialists and businessmen who initially shared the military government's ideological fervor for fiscal conservatism.

Faced with tight credit, low consumer demand, competitive imported goods and a growing number of bankruptcies, the leaders of the business community are asking the government to restore some of the maligned practices of the Allende era, including price controls, public investment and deficit spending, low-interest government loans and protective barriers against foreign products.

Discontent Acknowledged

Ranking government officials acknowledge the depth of discontent, but maintain that there will be no retreat from the austere economic plan followed since the 1973 coup.

According to Pablo Baraona, the president of the central bank and a leading economic adviser to the government, the fact that "more than 90 per cent of the people are against our policies is proof that the model is working, that it has affected everybody and that it has privileged nobody."

According to Gen. Pinochet and his economic advisers, the worst is over. Inflation has been brought down to 180 per cent from the 700 per cent annual rate registered at the end of the Allende period. For the first time in years, the country showed a surplus in its balance of payments and has succeeded, beyond anybody's expectations, in reducing the net level of its foreign debt, which still is an extremely high $4.5 billion.

Reality Cited

"It may well be that to many of our countrymen this feat may appear somewhat removed and its benefit not reflected in their daily lives. Gen. Pinochet said on the third anniversary of the coup that brought him to power. "Reality is quite different, however. If the balance of payments had not been successfully controlled, Chile would have been required to face the impossibility of continuing to import the most essential products and this would have led to general rationing and far greater sufferings than we have endured."

According to the government, unemployment now stands at about 15 per cent, or 450,000 out of a labor force of about 3 million people. An additional 200,000 are employed in the government's emergency work program, which pays them less than the minimum wage of about $45 a month.

A church-sponsored study showed that in 1969 a worker making the minimum wage could buy the items on a list of essential foodstuffs with slightly more than half his income, and spend the rest to cover other basic needs. Today, even spending his entire wages a worker can cover only 80 per cent of the items.

Those working-class families who receive the minimum wage must get by with a basically meatless diet. Among the unemployed, however, malnutrition has reached alarming levels.

Augusto Pinochet

UPI.

6 Prisoners Freed

SANTIAGO, Dec. 8 (AP).—The military government released six political prisoners yesterday, sending them into exile because of "their special danger to state security." They left on a commercial jetliner for Europe. The 6 were among 18 persons under detention without charges.

Rhodesians Claim Confidence in Loyalty of Blacks in Army

By Jack Foisie

SALISBURY, Rhodesia, Dec. 8 Leaders of the white-minority Rhodesian government, declaring that they have no worry about the loyalty of blacks in the armed forces, are planning to increase their number.

Blacks already comprise about one-thirds of the regulars in the armed forces and police, pitted against black nationalist guerrillas. Rhodesia has about 10,000 blacks and whites under arms, backed by reservists who are mostly whites serving on a part-time basis.

Until now all the blacks have been enlisted men. Recently, the army and the paramilitary police, in separate announcements, said they would soon commission their first black officers.

The insurgent war that seeks a take-over by force is slowly accelerating in almost all sectors. Government forces face guerrilla cross-border strikes from the surrounding black countries—Mozambique, Zambia and Botswana. In recent interviews with 31 black troopers of a field police unit just back from the front, the men displayed good humor, saying they were looking forward to their pay in cash, a unit leader party and then home to their families for 10 days.

Their white commander, Hans Heffman, urged them to be forthcoming in response to questions. But from private to sergeant major, they answered in monosyllables when asked about their feelings on fighting for whites against fellow blacks.

A concise but clear answer came from a corporal. Recently married, he said that what he sought most for himself and his pregnant wife was that there "be no trouble anymore."

"The people we are fighting are causing trouble. I want the trouble to end."

Did he look forward to a black government in Rhodesia?

"Yes," he answered warily. "But only if there is no trouble afterward."

White officers claim they have no fears of anything like "an Indian mutiny" occurring among black troops, referring to the native troop uprising against their British officers in India in the mid-19th century.

A black soldier's pay is better than what he might earn in civilian life. A black private even earns a little more than a white conscript. All Rhodesian whites from age 17 to 25 are required to serve at least 18 months. All black soldiers are volunteers.

Identifying Heavy Drinkers

Blood Test for Alcoholism to Aid Therapy

By Lawrence K. Altman

NEW YORK, Dec. 8 (NYT).—The first specific blood test to detect chronic alcoholism has been developed by a team of researchers here as an unexpected dividend from their alcohol experiments on baboons. The test offers the potential of more precise and improved therapy for the millions who suffer from alcoholism, a major public health problem, the researchers reported in a scientific journal.

Because the substances measured in the test persist in abnormal amounts after alcohol disappears from the blood, the researchers from the Bronx Veterans Administration Hospital and the Mount Sinai School of Medicine found that the new test could detect alcoholism even after heavy drinkers stopped drinking.

The test involves taking a blood sample from a patient and then calculating the ratio of two amino acids called alpha amino-n-butyric acid and leucine in the plasma fraction of the blood. Amino acids are the building blocks of proteins.

Unrelated to Nutrition

For unknown reasons, this plasma fraction was found to be more than twice as high in alcoholics than in nonalcoholics. The studies were done on hospitalized and ambulatory alcoholic patients and healthy nonalcoholic volunteers. The abnormality was unrelated to the patients' nutritional status, because it was found in both well and poorly nourished alcoholics, the researchers—Dr. Spencer Shaw, Dr. Barry Stimmel and Dr. Charles Lieber—reported in the current issue of Science.

The test can be done in any laboratory that has spent up to $50,000 for an amino-acid analyzer, and the researchers are using the test to evaluate various treatments in industrial and rehabilitation clinics for alcoholism.

But Dr. Lieber said in an interview that he considered the test experimental and not available for routine use until independent teams of researchers had verified the results according to the custom in scientific research.

Dr. Frank Seixas, the medical director of the National Council on Alcoholism, said in a separate interview that he considered the new test "a brilliant discovery" and "of tremendous significance" in the field of alcoholism research.

Further Questions

The researchers have determined that the test results reflect prolonged rather than short-term intake of alcohol, that the test remains positive more than a week after the long-term drinking period ends and that it tends to become negative as the alcoholic begins abstinence.

Among the questions that Dr. Lieber's team hopes to answer eventually are the following:

- Who is at risk of becoming an alcoholic?
- Can heavy drinkers in the community be identified?
- Having identified heavy drinkers, can those particularly at risk of developing such severe complications as cirrhosis be singled out before damage results?

Coca-Cola Tells SEC of $600,000 In Dubious Fees

ATLANTA, Dec. 8 (AP).—The Coca-Cola Co. made about $600,000 in "questionable foreign payments" from 1971 through last year, a company spokesman confirmed this week.

The firm said that amount included the $300,000 it had admitted to in October.

The larger amount was revealed in papers filed with the Securities and Exchange Commission Friday. The papers involved a proposed merger between Coca-Cola and the Taylor Wine Co.

There "have been indications that one or more past or present members of the company's executive management passes of knowledge of certain of the questionable payments," it said, the officials were not identified.

The company said it is continuing its investigation of the payments, and that "no assurance can be given that additional questionable payments will not be discovered. The extent to which any member of executive management had knowledge of or participated in making questionable payments can not be determined conclusively until the investigation is completed."

Grenada Majority Cut

ST. GEORGE'S, Grenada, Dec. 8 (Reuters).—Prime Minister Eric Gairy and his Grenada United Labor party were returned to power yesterday but with a parliamentary majority cut sharply from 13 to 3.

Magnificent view of Rome from Silvia's Bar
Open daily noon to 1 a.m.
Luncheons: noon to 2:30 p.m.
Dinners: 7 p.m. to 10:30 p.m.
Table reservation ask for "Charles" Tel.: 480.551.
Closed on Sundays.

PARIS MOVIES

Yves Montand: Too Nice To Be a Good Con Man

By Thomas Quinn Curtiss

PARIS, Dec. 8 (IHT).—Yves Montand is not at his best in his new film, "Le Grand Escogriffe" (at the Ambassade, Berlitz and Quartier Latin). He plays a con man who is simply too nice to be successful. His bungling is such that his sidekick (Claude Brasseur, a stooge of limited comic resources) goes straight in despair. This lighthearted premise might conceivably provide a mildly amusing rogues' comedy, something on the Damon Runyon order, but "Le Grand Escogriffe," like its protagonist, gets nowhere, lacking the necessary touch of whimsy to rise from the routine.

The ugly subjects of kidnapping and emphysema resist attempts at comic treatment by Michel Audiard, usually an adroit scenarist, who had the thankless task of turning a novel known as "Snatch" into a screenplay. Valentina Cortese is fleetingly seen as a flirtatious widow while Agostina Belli, the heroine of the hilarious "Carrière d'une Femme de Chambre," is ornamental. But the versatile Montand requires —as Chevalier did—a Lubitsch or a Mamoulian to reproduce his stage self before the cameras.

Jacques-Yves Cousteau is a documentary filmmaker unequaled in his field since the death of Robert Flaherty. With his "Monde du Silence," a work of extraordinary beauty and fascination revealing the secrets of the Red Sea, he took his place among the foremost French directors and followed his initial full-length feature with another underwater exploration, "Le Monde Sans Soleil."

Since then he and his crew have been on an Antarctic expedition aboard his ship, the Calypso, and have returned with a third film of inestimable value. Its title is "Le Voyage au Bout du Monde" and it is at the Ermitage, Rex, Odéon, Miramar and Cluny-Ecoles. A stimulating vacation from the porn, semi-porn and gangster violence products, it is recommended to all.

In the film, the viewer glides amid towering, threatening icebergs and weathers lashing blizzards. There is both excitement and variety to this instructive journey, and Cousteau is a charming as well as an informative host. He has remarkable modesty and humor in discussing his work and his respect and affection for all creatures—he even insists that the octopus has been maligned by romantic novelists—is most winning. He introduces the audience to friendly walruses, playful seals and prankish penguins, the white-breasted black birds "flying" beneath the freezing waters to discover what the explorers in bathyspheres are investigating. Here is a thrilling cinematic trip to the Antarctic.

In "La Première Fois" (at the Biarritz, the Marignan and the Clichy-Pathé), Claude Berri—as his title suggests—depicts an adolescent boy's introduction to sex.

Berri's boy doesn't know what every young boy should know. His schoolmates are scarcely better informed, though they offer much unsolicited advice. What to do? One girl will not go beyond the exchange of kisses. Another, a seemingly acquiescent companion, refuses at the last moment, alarmed by his inexperience. Thwarted, he seeks professional counsel and a prostitute initiates him into the mysteries of sex.

There are a few funny passages, some vulgar strokes and hesitant progress to Berri's new comedy. Alain Cohen, who made his debut as a child actor some years ago in "Le Vieil Homme et l'Enfant", is now in early manhood and portrays the teen-aged Parisian.

At first "Mr. St. Ives" (at the Elysées Cinéma and at Cluny-Ecoles in English) gives you the impression that the ghost of Raymond Chandler is peeking over the shoulder of its author, then the impression is that its author is peeking over the shoulder of Chandler's ghost.

Yves Montand, Claude Brasseur in "Le Grand Escogriffe."

Once more we have the tough, fearless Los Angeles private eye who lives content in bachelor squalor and is indifferent to wealth, the danger of his missions being sufficient reward. Once more he is summoned to a stately mansion inhabited by an eerie old millionaire and an enigmatic beauty. Once more he agrees to risk his skin. Once more he escapes brutal attacks and bullets and solves the mysteries. Everything is there except the Chandler fillip.

Charles Bronson is the bold investigator, Jacqueline Bisset is the shady lady, Maximilian Schell is a mad psychiatrist and John Houseman is the eccentric Midas who looks at old movies for relaxion between nefarious international deals.

LA SCALA

'Otello' With a Newly Minted Soun

By William Weaver

MILAN, Dec. 8 (IHT).—The absolute protagonist of the opening of La Scala last night was the conductor, Carlos Kleiber. This artist had already enjoyed a huge success here last season with "Der Rosenkavalier," now that success has been sealed with "Otello," which triumphed in the house where it had its premiere (in 1887), and where it has been heard under such masters as Toscanini, Serafi, Da Sabata.

The Scala orchestra can never have sounded any better than it did last night, as Kleiber made each bar, each phrase glow, shaping scenes and acts—and the whole opera—with architectural mastery. Alberto Zedda's revision of the score no doubt contributed to the clarity of this reading, but the conductor's freshness of approach was chiefly responsible for making the work sound newly minted.

The Strings

The strings sang and soared, the winds—in the many solo passages as in the opening duet and the final scene—played with unusual, sinuous sweetness.

The singers, too, were exceptionally involved in the drama. Mirella Freni, a gentle, girlish Desdemona, was particularly moving in the last act, as she moved from the "Willow Song" through her prayer with a wealth of nuance.

After a rather generic performance in the first act, Placido Domingo—not perhaps a natural choice as Otello—clarified his portrayal of the Moor: A noble, elegant, commanding figure, vocally more at home in the more tender, more meditative scenes than in the moments of overriding authority, but always impressive and convincing.

If Domingo is not a born Otello, Piero Cappuccilli is surely a born Iago. Last night there was an occasional roughness in the voice, but—except for some annoying histrionic laughter at the end of Act III—Italy's outstanding baritone acted with unsuspected power: a bluff, agile, alert villain. The smaller roles were strongly cast, the Cassio of Giuliano Ciannelle deserving special praise.

The first act of Franco Zeffirelli's production was confusingly busy: The drama took place among boys shinnying ropes, men carrying bales, perilously high ladders, swarming children and supers. La the action was more precis focused and the handsome s the tasteful costumes—also Ze relli's handiwork—seemed m cogent. The massive finale the third act was smoot handled.

OPERA

Royal Opera Measures Up With New 'Ariadne auf Naxo

By Henry Pleasants

LONDON, Dec. 8 (IHT).—It's an old saying in the world of opera that a company's strength is properly measured not by its stars who—especially in this jet age—come and go, but by its resources in the casting of secondary roles.

The Royal Opera's new production of Richard Strauss's "Ariadne auf Naxos," by John Copley with designs by Philip Prowse, introduced at Covent Garden Monday night, is a case in point. It was not the performances of Yvonne Minton as the composer, Heather Harper as Ariadne, Ruth Welting as Zerbinetta or Peter Lindroos as Bacchus that linger in the memory, good enough as they all were, but rather Paul Hansard's majordomo, Sir Geraint Evans's music master, John Pryatt's dancing master, Francis Egerton's Brighella and Thomas Allen's Harlequin.

The excellence of all these in character parts, especially in the prologue, tended to make a conspicuously unbalanced evening out of what is in any case a conspicuously unbalanced opera. After the excitement of seeing and hearing Peter Hansard stealing scenes [illegible] accomplished a scene-thief Geraint, the lamentation Ariadne in the opera despite the mellifluous Heather Harper's lovely the antics of the harlequi and Ruth Welting's coloratura virtuosity—seemed tedious fu

Balance will probably be proved as the lead singers g into their parts, notably Yvo Minton, whose handsome and pealing composer needs only additional intensity that come with assurance to rich promise into reality. Welting is inhibited by the of her person and her v contributing to a doll-like c acterization closer to Hoffma Olympia than to Strauss's binetta.

Copley's production is conv tional but effective, particul in the prologue, and the trance of all the characters during the overture is inge and adroit. Edo de Waart ducted with exemplary rele and clarity, and the orche responded with instrumental sic-making that consta delighted the ear.

AROUND THE EUROPEAN GALLERIES

Rome

Cy Twombly. Sperone, 21 Via Quattro Fontane, Rome, until Dec. 18.

Twombly is at his height. These "paintings," all done last summer, are pale, understated wild picture sequences.

"Leda and the Swan" is the essence of a swan rearing, in three versions. "Narcissus" is the word, half wiped away, on the first sheet, a blue cloud of soaring marks on the second, yellowing splashes on the third, a scribbled-over flower print on the fourth. "Thyrsis's Lament for Daphnis" is the poem scrawled in thorny high letters in the middle, flanked by two sheets covered with swoops of thick black.

The show is like an archaic frieze. Scratched sentences from Theocritus's bucolic poems, from Spenser's "Garden of Adonis" are used as armature, figuratively and symbolically. But whether a work is about ancient shepherds or modern longing, lush or sparse, home, or elegant, violent or sweet, the sting of these lyrical images is in the dizzying balance of opposing qualities.

Twombly's signs and portents, "cream colored screams" as the poet Frank O'Hara once described them (in Art News), used to be deployed over canvas in small aggregations in intriguing changes of perspective. More recently, he painted slate-gray surfaces covered with rows of marks.

It has been said his work has a kinship with action painting and with Tapiès. But this American is a loner. He came to Rome more than 20 years ago. Because he fused American immediacy with European sophistication he was first appreciated here. He has been a great influence on painters in Italy, and still is. This show is of a grand simplicity and moving; it is his best.

* * *

Robert Mangold. D'Alessandro-Ferranti, 26 Via Tor Millina, Rome, until Dec. 18.

Portions of geometric elements are drawn over canvases which are in other geometric shapes. The form of the canvas cuts into the drawing, the drawing into the canvas. Mangold, a New Yorker, poses problems he does not have to solve. Though his approach is conceptual, his canvases have the effect of decoration.

—EDITH SCHLOSS.

Paris

Alexander Calder, Galerie Maeght, 13 Rue de Téhéran, Paris 8, through December.

This exhibition includes 46 pieces, all but three made this year, all of them in the best Calder vein. The big room of the gallery is pure white and strongly lit, and in it Calder's toys—red, blue and yellow, white and black—hang from walls and ceiling or stand on the floor so that the whole space of the gallery seems filled with their leisurely movement and festive color. They all look familiar and now and then one gets the impression of having seen this piece before—a mistaken impression. Calder came back to his earlier subjects, not like Cézanne to his apples perhaps, but freely and with a freshness of spirit that makes repetition acceptable.

* * *

Victor Koulbak, Galerie Etienne de Causans, 25 Rue de Seine, Paris 6, to Jan. 17.

This show is Koulbak's first in Paris and includes a good number of drawings in the vein of those Koulbaks seen in the "Contemporary Russian Art" show at the Palais des Congrès. The artist left the Soviet Union last year. Characteristic of his work is the frontal view of people, as in some icons and medieval portraits. But each has something sober and strange. Some are masked under a woolen hood, others have idiosyncrasies to distinguish them: A [illegible] woman sucks a pacifier, and has a nut screwed onto the ti her nose. But Koulbak's in tion is gentle and his str people stand disarmed before viewer.

* * *

Alessandri, Galerie Visconti, Rue de Seine, Paris 6, to Dec.

Alessandri works with old of wood which he assembles they look like facsimiles of ce African objects: doors to silos and fetishes. The conte and nostalgic rustic tone reli a reflected warmth—the wor often very elegant but has found its own vitality.

* * *

César, Galerie Beaubourg, 23 du Renard, Paris 4, to Dec.

César, as a sculptor, achie notoriety by a variety of ma some imaginative sculpture the use he made of the hydra press. Thus he displayed t pressed automobiles reduced t fairly compact cube of crum metal. The present show is on "compressions" to be hung the wall—tarpaulins, crates, c board boxes, etc., reduced to shape of a large and rather it painting.

—MICHAEL GIBSON

DINING:

A German Gamble That Paid Off

By Naomi Barry

PARIS (IHT).—"It takes guts to open a German restaurant in Paris," said Rolf Nefer, director of Au Vieux Berlin, 10 years after he attempted the impossible.

The first year was a bust. The next two years, he got along on choucroute. It is one of the best in town: A bed of crunchy sauerkraut and creamy mashed potatoes heaped with delicatessen: smoked pork chop, frankfurter, Nuremberg sausage, cervelas, slab of smoked fatback. But German cuisine is not only choucroute—"It is just one specialty," Mr. Nefer said. "I am glad to tell you that it is now down to 30 per cent."

Mr. Nefer came to Paris to represent German agricultural products. The French regarded the country across the Rhine as the Great Gastronomic Desert. To force himself on local consciousness, he established the restaurant Au Vieux Berlin and its two snack bars as a high-class showcase. These days there is hardly a German client. On the side, Mr. Nefer put in a small shop to sell products such as bread, cookies, meat products, cheese, canned goods.

"The first year we did 300,000 francs worth of business in the shop. Last year we did 2 million francs. All in 28 square meters. It is crazy. I have to keep it open until 11 p.m., the customer demand is so great."

Lunch the other day began with a shrimp salad Zellermayer. The latter was the Maxim's of Berlin during the twenties and thirties. The delicate shrimp, hardly bigger than a comma, are shipped in from Hamburg several times a week. The salad was prepared at tableside: shredded lettuce, the shrimp, hardboiled eggs Mimosa, and a dollop of sauce—mayonnaise with a dash of ketchup, a hint of horseradish, a suggestion of orange juice and a few drops of Weinbrandt (a white alcohol made from grapes). The tiny shrimp are so good that lemon juice would have been enough. However, the sauce is kept to a minimum and the flavor comes through unmasked.

The traditional way of serving matjes herring is under a blanket of heavy sweet cream. Vieux Berlin offers an interesting 50/50 combination—half heavy cream, half yoghurt—with the usual slivers of pickle and apple.

The restaurant has developed a brochette of matjes herring which has had great success with the French, but it is too far from the original product for a real matjes fancier.

The frankfurter was a find of the city of Frankfurt and, since 1929, the skinny, smoked, 100-percent pork sausage has been granted the official appellation of Echte Frankfurter, which designates the real stuff. A pair are accompanied by potato salad, or by a mound of grated horseradish which is even better. Good horseradish should make you weep a little.

Horseradish, toned down with heavy cream, comes with the smoked trout from the Black Forest.

Braised beef with bone marrow and spätzle, German style niblets of pasta, is a homey dish. Equally hearty, but more unusual, is a filet of pork cooked in beer and nuttily flavored with cumin. The garnishes are a fat baked apple, cored and peeled, the center filled with airelles—a European approximation of the Cape Cod cranberry—and a crisp little potato pancake.

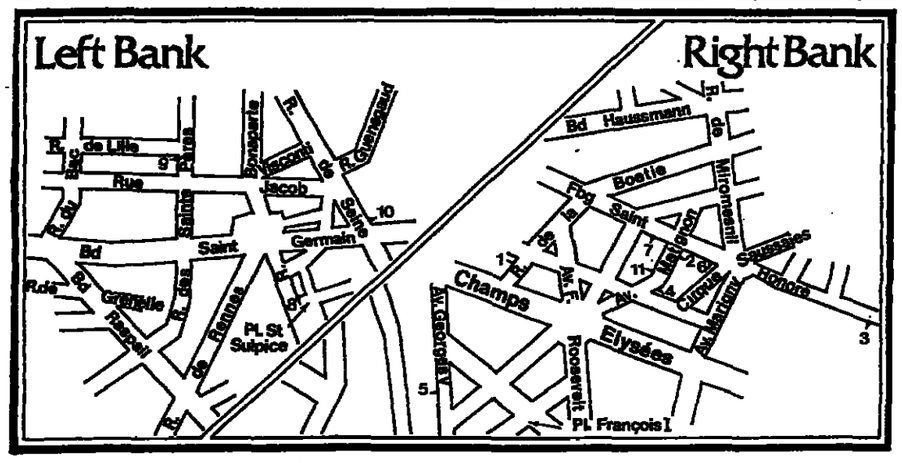
Mr. Nefer has concentrated on those German dishes and wines which give the French the impression they have not gone too far abroad.

The apple strudel—apples, raisins, nuts, butter, sugar and cinnamon—baked within paper-thin crusts of pastry glazed under the grill is of a mouthwatering quality found only in central Europe.

At lunchtime, the restaurant is filled with businessmen. At night candles flicker on the tables and a pianist plays nostalgic airs. The service is distinguished by its amiability. The snack bars offer a streamlined menu of the same food.

POTATO PANCAKES
Au Vieux Berlin

1 kilogram potatoes
50 grams potato starch
3 eggs
50 grams chopped chives
Salt and pepper.



Peel potatoes and grate fine. Then squeeze in a towel to extract maximum of water. Mix with potato starch, beaten eggs, chopped chives and salt and pepper. Fry on both sides in hot vegetable oil until golden brown. Serves four.

(Au Vieux Berlin, 32 Avenue George V, Paris 8. A second entrance at 45 Rue Pierre Charron, Paris 8. Telephone: 225.38.96. Closed Sundays. Average price: 80 to 100 francs. Snack bar: 40 to 50 francs.)

A Special Report

INTERNATIONAL
Herald Tribune
Published with The New York Times and The Washington Post
PARIS, THURSDAY, DECEMBER 9, 1976.

FOCUS ON ENERGY

THIS survey of world energy seeks to pinpoint its significance not only within the context of energy itself but its impact on the political and economic development of nations, on producers as well as consumers.

In separate but often interlocking articles, the survey analyzes the changes in the world's energy pattern—indeed, in its economic and political balance—since the Middle East war in October 1973. It investigates the role of agencies such as the International Energy Agency, the European Commission, the Organization of Economic Cooperation and Development, the Organization of Petroleum Exporting Countries, the International Atomic Energy Agency and many others operating on a national or international basis.

THE problems of funding oil and gas exploration and development, nuclear energy and alternative sources are explored in detail; so is the issue of "recycling" of surplus oil revenues, a direct consequence of the Middle East war and the escalation of energy prices and costs.

There are reviews of energy sources, reserves (both proven and potential), their approximate duration, the consequences of depletion rates, their impact on the financing and economics of energy on a world as well as national scale. For this is an increasingly interdependent world: the problems of one set of countries such as the industrialized West are reflected in the reaction of another set of countries, such as the oil producers, just as the aspirations of the latter can deepen the problems of the West.

THE unequal distribution of energy reserves throughout the world coupled with the equally lopsided pattern of consumption have created further problems which are now as much a part of political and economic confrontations as of attempts at cooperation between nations and groups of nations. It also influences the pace of search for new and more effective forms of conservation and alternative sources of energy such as oil shale, tar sands, wind, tides, waves, solar and geothermal forces as do considerations of accessibility, cost, supply and demand and the nature of international relations at any one time.

Nuclear energy, the largest and most immediate prospect for bridging the looming energy gap (predicted for well before the end of this century) is itself the subject of controversy in advanced industrial countries and in their relations to the less developed parts of the world. Opposition comes not only from the "doomwatchers" but from those who fear pollution and "nuclear terrorism."

THERE are of course questions which are left unanswered in this survey. There are projections which may go awry: indeed some of the forecasts were revised while the survey was being written; others were still not available. Estimates, too, can be tentative, indicating broad directions and distant signposts but no certain solutions or targets. In such a highly-complicated field as energy, it is inevitable that some figures are in conflict with others.

One hopes nevertheless that the survey will be of some help to those who wish to understand the global complexity of the energy question, the vast diversity of facts and points of view, indeed of illusions. For it is the illusions that often shroud the facts and distort points of view and so create risks and attitudes in international behavior which may eventually threaten world peace.

OPEC

Saudis Are Key To Oil Producers' Front

By Alan Parker

LONDON (IHT).—In its first ten years of existence no great impact on the public consciousness was made by the Organization of Petroleum Exporting Countries. Founded by Saudi Arabia, Venezuela, Iran, Iraq and Kuwait in 1960, largely at the instigation of the first two of these, OPEC at first was no more than a protest against the moves by Esso and others to reduce posted prices for oil, and hence per-barrel oil revenues for the producer countries, then based on these posted prices.

The protest succeeded. No further cuts in the posted prices were ever attempted, even though effective petroleum prices during the 1960s stayed well below posted prices.

In practice, therefore, OPEC governments were receiving considerably more than the 50 per cent of the value of the oil that the concession arrangements were then supposed to give them. Later, by negotiating with the companies a change in the royalty-tax arrangements OPEC moved still further from the 50-50 principle.

Nevertheless, after ten years of life, this supposed cartel, despite the entry of new members, had done nothing to transform the allegedly unfair and inequitable terms of oil concessions then prevalent, and nothing to redress wrongs allegedly done to its members in the past. Nor had it had any glimmer of success in its periodic fumblings toward a policy on regulating the output of individual members. Too many powerful members wanted to stay free to produce as much as they liked.

Major Revisions

The pattern changed in 1970. Libya and the Gulf producers negotiated major revisions in concession terms in their favor, a change that made its mark on oil price levels in Europe. But all OPEC had done was to provide the producers concerned with a clubhouse in which they had discussed their common problems for ten years, a modest secretariat, and a spirit of cohesion.

Even in October and December 1973, it was not OPEC that put up prices. It was the six Gulf producers. It was not until

IEA

19-Nation Consumers Rally to Challenge

By Michael Parrott

PARIS (IHT).—When the Arabs imposed their oil embargo in the autumn of 1973, the major industrialized countries were caught completely off their guard. While the oil producers were able to operate in unison through the Organization of Petroleum Exporting Countries (OPEC), the first reaction of the consumer nations was very much "every man for himself." European countries were only too ready to obtain exemptions from the ban to bother about. Holland and the United States, both of which were subjected to the full force of the embargo. But when the same to Middle East initiatives, the Europeans felt they had been completely ignored by the United States. In the scramble for oil supplies, the unity of the Common Market, even of the Western world as a whole, was suddenly threatened.

It was in this atmosphere of mutual recrimination that U.S. Secretary of State Henry Kissinger invited representatives of the major consumer countries to a meeting in Washington in February 1974. It was there that agreement was reached to set up a consumer alliance—the International Energy Agency (IEA). Nine months later, in the conspicuous absence of France, the 19-member organization was formally set up in the Organization for Economic Cooperation and Development (OECD) buildings in Paris. The executive director was 49-year-old Ulf Lantzke, former director of the energy department of the West German Ministry of Economic Affairs.

The official aims of the agency were to secure oil supplies on reasonable and equitable terms, to introduce an effective oil allocation scheme in the event of an emergency supply shortage, to establish a dialogue with oil-producer countries and non-member consumer nations, including developing ones, to set up a comprehensive information system on the international oil market, to

EEC

The Energy Crisis Seems To Provoke Nationalism

By David Haworth

BRUSSELS (IHT).—It's an odd fact that there is no mention of a common energy policy in the basic treaties on which the European Community is founded. Nonetheless, the EEC has been working towards such a policy since 1962—proposing at that time a three-phase development to a Common Market open to member countries and backed by a system of aid to community energy production. But progress on this was leisurely, to say the least. It was not until the energy crisis at the end of 1973 that the EEC was shocked into awareness of the crucial importance energy factors will play in the community's future.

It would be nice to report that the crisis three years ago (which, of course, continues in a different form) obliged the EEC's nine member nations to give their attention to attempts to solve their long-term energy problems. Unfortunately, this has not really been the case. The energy crisis seems to provoke the most nationalist feelings of disparity in this area. For the European Commission, which has cast the energy problem well before the oil crisis actually broke, the crisis clearly shows the need for the Nine to create and apply a common energy policy both internally and externally. Its call was to some extent heeded, at least during the first months following October 1973. However, from the word go, its implementation ran into the obstacles created by the major divergences of interest between the Nine. At the same time, the trend of international developments resulted in a loss of interest by Common Market countries in the creation of a common energy policy. Eight of them are members of the International Energy Agency, and appear to believe that energy problems can better be solved at this level (the world's 19 richest countries, minus France) rather than in the EEC framework.

Imported Oil

There can be no escaping the fact that imported oil has become the very foundation of Europe's prosperity for the foreseeable future. For the next 15 to 20 years, it can be expected that Europe's dependence on this oil

(Continued on Page 13, Col. 2)

Economy: Dwindling Reserves, Little Progress on New Sources

By Andrew Hargrave

LONDON (IHT).—Even before the Middle East crisis in the autumn of 1973, voices had warned about the depletion of the world's energy resources and the urgency of stepping up exploration, development, research, conservation and cooperation between producers and consumers.

The Middle East war, followed by a temporary embargo on certain countries and by the quadrupling of crude oil prices, succeeded for a while in concentrating the minds of Western nations on these vital issues. The International Energy Agency, set up at the instigation of the United States, prepared plans for anticipating such crises and for joint action in the case of another emergency. The European Community, all but France also members of the IEA, took the initiative along similar lines. Ideas abounded on how to "recycle" the producers' vastly swollen oil revenues.

Since then, however, interest in these laudable aims and objectives seems to have flagged. It has been revived somewhat in the last few weeks, because of Western anxiety over oil-price increases expected to be announced by the Organization of Petroleum Exporting Countries (OPEC) at their meeting later this month. But there is still no sign of any urgency in the search for new and alternative energy sources except perhaps in the North Sea, where tapping this important new oil and gas resource is chiefly seen as a means of alleviating the United Kingdom's economic plight.

One reason for this lukewarm approach may have been the economic recession which overtook the West in 1974-75, partly as a result of the escalating energy costs. The partial revival this year has been clouded by doubts over its duration, reflected in the recent forecast by the Organization for Economic Cooperation and Development (OECD), which comprises all advanced Western nations, of another recession possibly within the next 12 months. The International Monetary Fund (IMF) has been equally pessimistic.

Growth

There is, of course, a close relationship between energy consumption, economic growth (as expressed in GDP, the gross domestic product) and standards of living.

Between 1962 and 1973, a period of overall economic growth, world consumption of primary energy rose by over 80 per cent from some 3.3 billion tons of oil equivalent to 6.1 billion tons. In the OECD countries, which in 1962 comprised almost two-thirds of the world's total energy consumption, consumption rose by two-thirds, from 2.1 billion tons to 3.4 billion tons. Growth was faster in the Communist countries in which consumption nearly doubled and fastest of all in the developing countries, including OPEC, where it more than doubled.

During that period oil and gas met more than 80 per cent of the increase in energy demand, oil alone more than half. That increase was reversed in 1974-75, but so was the rise in GDP. Decline was more pronounced in the OECD countries which are having to import more than one-third of their energy requirements. (The proportion of imports is much higher in Western Europe—it is around 60 per cent in the EEC—and in Japan, and somewhat lower in the U.S.) Just over half the total OECD requirements are met by oil: hence the direct and catastrophic effect of price increases on the cost of energy and, consequently, on economic growth and inflation.

Another reason for the slowing down in the quest by the West for new and alternative sources of energy and conservation in the last couple of years has been the relative stabilization in the price of oil. After the escalation of prices in 1974, the 10-per-cent increase on Oct. 1, 1975, seemed moderate and generally speaking in line with the then prevailing level of inflation. The West's first reaction to the possibility of an oil price increase of anything from 10 to 20 per cent next year is much more violent this time because of the threat to the fragile economic revival and the prospect of another recession.

A third reason for the apparent lack of urgency is the continuing absence of common purpose and readiness to take joint action by the consuming nations, although the producers, too, are divided amongst themselves on such matters as prices and rates of depletion.

The clear policy objectives of IEA and the European Commission are still to be translated into action by the member states. The situation has not changed fundamentally since those panicky months in the winter of 1973-74 when the world first woke up to the possibility that energy—the greatest single factor in sustained economic growth and, indeed, civilized life—may be in short supply within a generation or two.

Reserves

Between mankind and that threatened shortage are the resources which are the basis of energy supplies. The main ones are oil, gas, coal (both hard and soft), uranium and, to a much lesser extent, water.

There are also a number of alternative sources which will be discussed later. Nevertheless, in the medium (20 to 30-year) term, interest must focus on the four main ones.

The first table shows recoverable reserves (including probable and so far undiscovered ones) as estimated by the U.K. Department of Energy (figures in billions of tons of oil equivalent).

The table illustrates the finite character of our fossil fuel reserves, even coal at the present recovery rate or uranium burned relatively inefficiently in conventional reactors. It also underlines the dependence of the life expectation of these resources on consumption—and consequently economic—growth rates.

A further complication in respect of reserves is their unequal

(Continued on Page 16)

Politics: West's Vulnerability in Price, Participation Clashes

By Andrew Hargrave

LONDON (IHT).—The possession, control and use of important raw materials has been a major factor in international relations throughout the ages. This is especially true of the sources of energy—coal, oil, gas and, more recently, uranium. The control of these resources or their denial to a potential adversary has been the key to many twists and turns in the uneven course of history.

The conquest of the Ploesti, Romania, oilfields in the First World War and those of Baku, Soviet Union, in the second was among the top strategic priorities of the German High Command to support a war economy seriously short of domestic energy sources. France's reluctance to relinquish her hold on Algeria was not unconnected with the latter's resources of natural gas and oil; Britain's reaction in 1951 to the Iranian attempt to nationalize the Abadan oilfields and refinery had strategic as well as economic undertones, and set the pattern for similar clashes of interest since.

Nuclear energy has its origins in the most destructive human weapon so far invented and the opposition to it has been motivated to a very considerable extent by memories of Hiroshima and Nagasaki.

Clashes

It is against this background that the price and participation clashes of recent years, the hitches in nuclear power station programs, the uneasy and sometimes malfunctioning alliances and groupings of producing and consuming nations must be viewed. A classical example is the Middle East crisis in the autumn of 1973 and its aftermath which is still very much with us. For the oil price rises that followed not only affected the prices of other sources of energy and consequently the balance of payments in favor of the producers, at the expense of the consumers, but also the domestic economies of the latter. This has in turn led in its cumulative effect to a major disturbance in the complex and highly integrated and interdependent economy of the industrialized West.

Disturbance has turned into a recession, the most serious and widespread the West has experienced since the last war. That is why the price increases the Organization of Oil Exporting Countries (OPEC) will be contemplating at its next meeting in Qatar later this month are already being challenged by leading Western countries, including the United States, Germany and the United Kingdom. They are challenged not only because the increases put an extra charge on energy but because of their overall effect on the tenuous and fitful economic recovery in the West and because of the further boost to the shift of the balance of economic power towards the producers.

The International Energy Agency, backed by 19 Western countries (all the major energy importers except France), was set up in November 1974 primarily as a consumer cooperative to present a united front to the 13-member OPEC. Its proposals for a series of countermeasures to stockpile oil, gas and coal, to search for new energy resources and to conserve existing ones has been paralleled by similar objectives put forward by the European Commission of the nine-member EEC. "Project Independence," launched by ex-President Richard Nixon in the wake of the Middle East war, would have it as its aim to make the country altogether independent from outside energy sources.

Politics

Just how far these plans, targets, objectives have succeeded is analyzed in other articles in this survey. The main reason for any lack of success has, however, been political: an absence of urgency and will to cooperate by the Western nations, rather than any concerted attack by OPEC. The memory of the traumatic quadrupling of oil prices, let alone the temporary embargoes imposed on the United States and on the Netherlands barely three years ago, has already faded.

In fact, OPEC denies that the West's economic plight is caused by oil price increases or that the mounting oil revenues to producer countries have created a disturbance in the world's monetary system. But one of its leading spokesmen, Secretary-General Chief M.O. Feyide, emphasized recently that "there is no possible return to the pre-1973 situation of cheap and plentiful oil."

While large price increases were unlikely in the future, he went on, "exporting countries will strive to maintain the real value (or purchasing power) of their earnings."

Chief Feyide's hint that even a 40-per-cent price rise could be

(Continued on Page 17)

The Saudis Are the Key to Oil Producers' Solidarity

(Continued from Page 11)

March, 1974, that OPEC ministers sat down to review prices for the first time with the power to set them unilaterally.

Nevertheless: the size, unexpectedness and timing of the December, 1973, increases, coming as they did in the midst of the shortages caused by the Arab cutback and embargo, detonated an explosion of resentment in consuming countries, above all in that erstwhile self-sufficient oil consumer, the United States. This most effective of cartels was charging an excessive price for an essential commodity, thus causing economic and political disruption in the West because of the inflationary and balance-of-payments consequences, plunging the world into recession, and ruining the economies of the developing countries. Fortunately, however, the cartel would stimulate a colossal glut of energy, thus bringing oil prices crashing down.

A Different View

However, as time has passed a different view of the real nature of OPEC power has emerged. In 1974 the world economy sank into the severe recession that had been forecast before the oil price jumps. Demand for oil fell. But this drop was only slightly greater than the recession might have been expected to cause on its own.

Inevitably most of the drop in oil demand fell on OPEC. But, despite falls in total OPEC production, far from collapsing, effective oil prices actually rose further: with the changeover to state participation and nationalization, and the rationalization of the price formula on the Gulf at the end of 1974; and at the Vienna OPEC meeting in September 1975—at virtually the bottom of the depression—they were hoisted another 10 per cent.

All this would have made perfect sense if OPEC were a genuine cartel, regulating the rate of output of its members. But OPEC has no power to do this. Yet the drop in demand for OPEC crude in 1974-75 caused no strain on OPEC and did not prevent it from increasing prices further. True, there was some price-cutting by Libya and Iraq in 1975 and there were several price changes by Nigeria among others. Yet these did not precipitate a spiral of price-cutting. Clearly some other factor is underpinning the whole system. That factor, it is now clear, is Saudi Arabia.

Saudi Arabia

Saudi Arabia is now the residual supplier of the world oil market. Its output goes up and down to balance up world supply and demand. As was clear in 1975, when demand falls beyond a certain point, other producers like Nigeria and Libya start shaving their prices.

But what prevents the whole thing from collapsing in a spiral of competitive price-cutting is the fact that behind it all lies Saudi Arabia. Saudi Arabia will not cut the price of its main crude, Arab Light, because this is OPEC's market price. And Saudi Arabia can absorb a drop in oil production from its normal seven to nine million barrels per day (bpd) to three and a half million bpd, without dipping into accumulated surpluses to meet its needs.

There is no danger of OPEC collapsing in a spiral of price-cutting so long as its members know that Saudi Arabia will not join in. On the other hand, if it chooses, Saudi Arabia can produce up to 11 to 12 million bpd. By flooding the market, Saudi Arabia could wreck any price level set by OPEC that it does not approve of. It has held this threat over OPEC at each of the last two price-fixing meetings, at Vienna in September 1975 and in Bali in May of this year.

In other words Saudi Arabia has the power to dictate the price. As the international oil consultants Walter J. Levy S.A. of London recently commented, "... as the world's marginal supplier of oil, and of energy, Saudi Arabia has now explicitly assumed the role of the determiner or arbiter of the prices of world oil and energy."

Similarly, Robert Mabro of St. Anthony's College, Oxford, has concluded. "... Saudi Arabia is the linchpin of OPEC. One could almost say without too much exaggeration that OPEC is Saudi Arabia."

This is the emerging consensus among expert observers. Mr. Mabro, for instance, points out further that this set-up implies that Saudi Arabia does not have control over how much oil it produces. And Walter J. Levy S.A. has pointed out that Saudi Arabia cannot control both price and its output level: in 1977 (temporarily) and in the 1980s Saudi Arabia might have to choose between lifting its present production ceiling of effectively 8.8 million bpd and losing control over the oil price—if and when demand for oil exhausts the available capacity of other producers but requires more than 8.8 million bpd from Saudi Arabia in addition.

Sooner or later Saudi Arabia may start setting the price with the deliberate aim of regulating world demand for oil so that the volume of oil needed from it is in line with what it wants to produce. But this point is some way off.

At present, although Saudi Arabia has an undisguised power of veto, OPEC price-fixing is still a compromise between those seeking higher prices because they have large revenue needs and/or small remaining oil reserves and/or are politically very anti-West, and the moderates led by Saudi Arabia, who are more anxious to avoid political provocation to the West, or to the poor countries, and who (in the past) have been keen to avoid prejudicing the long-term role of oil by over-pricing it now in relation to other energy sources like nuclear power.

Inner Circle

It is also clear that within OPEC most weight is still carried by the inner circle of original founding members, especially Iran, plus perhaps Algeria. But, as the last two years have shown, non-members of OPEC, and notably the United States, have some hidden influence too—through the political pressure they are able to exert on Saudi Arabia.

Nevertheless, despite their many quarrels, OPEC members have demonstrated a stronger sense of solidarity than had been realized by many in the West. Its members all share a genuine resentment at the exploitation they believe themselves to have suffered from in the past. They believe that it was only by standing together that they have secured the enormous gains they now have made.

But for the moment this solidarity is not OPEC's essential ingredient. The essential ingredient, most experts now agree, is Saudi Arabia. With equal ease Saudi Arabia can produce between three and a half million bpd and 11 and a half million bpd. This range will take account of any likely fluctuations in world oil demand and supply over the next ten years or more. It is that Saudi Arabia will be able to dictate the price. Saudi Arabia looks likely to remain the world's marginal supplier of low-cost oil for as long as the world's oil lasts.

Radical Change

But why is it only now that the marginal producing country is able to dictate the price which OPEC made little or no impression on the price in the 1960s? The answer here seems to be that the world has changed radically since the early 1970s. Up to then too much oil had been found, above all in the Middle East and Africa. All OPEC members wanted to produce more. But the faster their combined production grew, the weaker became the price levels needed to shift the oil. This overhang was vanished in the early 1970s even before America entered the world market as an oil importer on an increasing scale.

Now, world oil reserves are still increasing but not nearly as fast as the growth of oil consumption. Worse, estimates of how much more oil may ultimately be discovered suggest that the rate of world oil production will begin to decline towards the end of the century, so that very large quantities of alternative fuel sources will be needed by then.

Given the problems now being faced in stepping up production of coal and nuclear energy, present oil prices, the trend in oil prices looks likely to be sharply upward in real terms over the next 25 years. For Saudi Arabia, the world's marginal supplier, which cannot absorb anything like the present level of oil revenues, the attraction of keeping the oil in the ground is only too plain. And that, probably, is why OPEC now works.

IEA—Consumer Nations Rally to Face Challenges

(Continued from Page 11)

develop a permanent framework for consultations with oil companies and to reduce dependence on imported oil through long-term cooperative efforts on conservation of energy, on accelerated development of alternative energy sources, on research and development in the energy field and on uranium enrichment.

Saber Rattling

It was perhaps inevitable that the creation of a consumer grouping so soon after the Middle East embargo should have been seen as an offensive move against OPEC. This impression was reinforced by France's refusal to have anything to do with the organization and the saber rattling of some U.S. politicians. William Simon of the U.S. Treasury Department argued that the new oil prices were too high, Thomas Enders of the State Department talked of the need to break OPEC; even Henry Kissinger warned of possible military intervention if vital U.S. supplies should be threatened.

Of course, the basic aim of the International Energy Agency is to change the supply/demand balance in such a way that consumer countries can once again obtain secure and reasonably priced oil. In this sense it is trying to weaken the position of the producers who can now virtually charge what they like because of the shortage of alternative energy supplies. But even the OPEC countries welcome the attempts of consumer countries to develop other energy sources and reduce their oil consumption. For it is only by reducing demand for their oil production that they can be assured of a longer life span for their reserves and only by encouraging consumers to develop their own energy sources that oil prices will remain high.

Indeed the most remarkable aspect of the IEA today is not so much the attempt to restore the buyers' market of the 1960s, but the recognition of the OPEC argument that the world's oil reserves are too valuable to be squandered through low oil prices. For IEA Executive Director Ulf Lantzke, the present price of oil is not just the work of a cartel, but the consequence of a shift in the supply/demand balance. The answer is not to break OPEC but to create a new market balance where those cartel powers will no longer operate. Ironically the only way in which this new market balance will be achieved is through higher prices. For it is only when oil becomes more costly that the consumer countries will be forced to reduce their consumption and investments in alternative energy sources become worthwhile. "The only real chance of oil prices falling again is if there is a serious economic crisis," says Mr. Lantzke.

Progress

That does not, of course, mean that the IEA actually favors higher prices. There are times when agency officials wonder whether another sharp price increase is not needed to shake consumers out of their complacency, but for the moment all the agency is seeking is that its members pass on to the customers whatever increases are set by the producers. For until this is done—and it has yet to be done in the United States, Canada and Australia—even the existing possibilities in the conservation and development fields will not have been fully utilized.

After two years of operation, what has been the success of the agency? Its most obvious achievement has been its ability to bring together energy experts from member governments on a regular basis. In this way consumer countries have been able to compare notes and work out their individual program. Great progress has also been made in collecting market information from oil companies in such a way that governments can know what is happening without companies losing any competitive advantage. In the event of an emergency supply shortage, figures on all oil traffic in one month will have been assembled within the first fortnight of the month that follows.

Of key importance is the emergency self-sufficiency demand restraint and allocation system which is designed to keep consumer countries supplied with oil for at least 200 days. After the Suez crisis in 1956, the Organization for European Economic Cooperation (OEEC) set up a special oil committee to handle future oil emergencies, but with neither the United States nor Japan as members and unanimity required before any action, it was left to the oil companies to share out supplies in the 1973 crisis.

Under the new system companies will continue to shift the oil, but governments will assume the responsibility for its allocation. Members will cut back their consumption by seven and ten per cent respectively, if overall supply falls by more than seven or 12 per cent. After some adjustment has been made for importing countries to draw on stocks, remaining requirements are met on a pro rata basis according to whatever supplies are available, be they indigenous or imported.

The agency has played a quiet background role briefing consumer nations in the energy working group of the Conference on International Economic Cooperation (CIEC), but has so far had no direct contacts with OPEC. It has made a symbolic gesture toward protecting investments in indigenous oil by setting a minimum safeguard price for oil sold within the IEA and it has also encouraged a number of research and development projects.

Agreements have already been signed in fields of coal and nuclear power. A joint fluidized bed combustion rig is being built in Britain, new data services are being developed on the coal trade, research is being undertaken into nuclear reactor safety and the resistance of materials to the fusion process. Working groups are examining projects in new energy sources such as geothermal (Italy), wind (Holland), wave (Britain), solar (Japan) and biomass (Ireland).

But if the agency has acquired a reputation of being more dynamic and down-to-earth than most international bodies, it has not escaped some of their handicaps. Energy has now become such a sensitive political issue that it is not always easy to obtain cooperation from member governments. All too often politicians make high-minded declarations on energy development and conservation only to surrender to short-term political pressures. It is significant that in its recent report on "Energy Conservation" the IEA openly expressed doubts as to the will of member governments to push through with their conservation program and that member governments have now agreed to prepare lists of measures to which they would definitely commit themselves. Perhaps the most disturbing aspect of all is that the country which was mainly instrumental in setting up the agency has so far done so little to help it attain its supply/demand objectives.

With the prospect of OECD oil imports rising to at least 35 million barrels in 1985 compared to only 26 million in 1973, it is already clear that the agency still has a long way to go.

At the moment, consumer countries are heading for another supply shortage in the 1980s with the risk of yet another sharp increase in prices. This situation could still be avoided if consumer countries heed the warnings of the IEA secretariat and introduce a series of measures aimed at increasing energy supplies by 6 million barrels and cutting demand by 5 million, thereby bringing import demand to 24 million, well below OPEC's likely production capacity. Now that the President and Congress in the United States are of the same party, the United States may at last be able to give the IEA the example and performance it so badly needs.

ANOTHER ITALIAN HEAVYWEIGHT

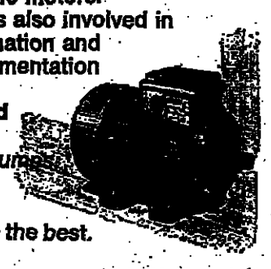
Ercole Marelli working the big league.

High technology.

The Ercole Marelli group (it means Hercules in Italian) is out to rollerball its way into the world's electromechanical, electronic and nuclear markets. And tidy the environment.

Delivering plant and equipment for 175 million dollars this year.

Operative divisions and associated companies bursting with energy and ideas, and ready to apply them in any context, in any part of the world.



Two operative divisions.

The Industrial Plant and Systems Division builds nuclear as well as non-nuclear plant for electricity generation, and will play an important part in Italy's nuclear expansion program.

It is into systems for the iron and steel industries, traction equipment, medium and large electric motors.

It's also involved in automation and instrumentation of industrial plant.

Meanwhile, the Standard Products Division keeps turning out those motors, pumps, fans and air-conditioning equipment which Ercole's experience has shown to be the best.

Three specialist companies.

Aermarelli: the world-scale engineers and contractors in air-conditioning and refrigeration systems.

Item: stable cleaning. Designs and produces sophisticated anti-pollution and water-treatment plant to safeguard the environment.

Constructing some of the most advanced power and industrial transformers including units in the UHV range.

And worldwide.

The Ercole Marelli group is global, obviously. It manufactures in Argentina, Brazil, France, and Italy.

It has associated commercial operations in Belgium and the German Federal Republic, and counts agencies and representatives in some forty countries.

Two current labours of Ercole:

- four 400 MVA turboalternators and transformers for a power station in Iran
- a highly critical air-conditioning and ventilation system for Lausanne's new University Hospital.

That's got to mean technology, rollerballing's punch.

Write on company letterhead for more information.

Join his fans.

Soviet Union Is Rich in Resources but Poor in Technology

LONDON (IHT).— After the development of the Baku fields in the 1870s, Russia quickly emerged as the world's second largest oil producer, and a leading oil exporter. Today it is the world's largest oil producer, having pulled ahead of the United States last year. It provides the bulk of East Europe's oil requirements and exports to the West (over 1 million barrels a day — enough to say half the production of Nigeria).

But the days have long since passed when Russia could disrupt Western oil markets with its exports, as happened in the late 19th century, in the interwar period, and in the 1950s. Nor is it any longer seen as a limitless source of black gold available to finance Russian payments deficits. Oil is becoming a problem for it.

The problem is not the marked underfulfillment of production targets in successive 5-year plans. As Jeremy Russell has noted in his recent book ("Energy as a Factor in Soviet Foreign Policy," Saxon House), the achievements of the Russian energy industries have been substantial in the past 20 years, in the face of the handicaps they have had to bear: the Communist system of management, the shortcomings of other ministries and formidable physical challenges.

Of these challenges probably the most serious is simply Russia's geographic size. Russia is now having to build oil and gas facilities at a rate equivalent to a Alaska pipeline every four or five weeks.

Larger Fields

The old Baku fields have long since given place to the large fields in the Volga-Ural regions. These now form Russia's main producing area. But in these fields, as well, output is past its peak in many cases. All the future growth, and more, is to come from east of the Urals fields, and above all from those in West Siberia. These are remote from the consuming areas, and static and geographic conditions pose problems and the oil (and gas) deposits are frequently at great depth. Yet West Siberian production is to double between 1975 and 1980. Then it will account for about half of total Soviet production.

But in terms of resources these fields involve heavy costs. It is the mounting resource cost of bringing into production increasingly remote and difficult fields that explains the sharp slowdown in the rate of output growth from the annual 12 per cent or so of the 1960s, to the 6.5 per cent achieved in 1971-75 (against 7.2 per cent planned) and the 5.2 per cent planned for 1976-80.

Beyond this there looms the worrying question of what will ultimately replace West Siberia. Discovery of new reserves has not been keeping pace with the growth of production. Over 15 years proved and probable reserves have risen in the ratio 100:220 while output has risen in the ratio of 180:340. Even the slower production rate expected for 1976-80 is no lower than the rate that reserves grew in 1971-75.

Gas

The slowdown in oil output growth, and the uneasy medium-term prospect come as Russia is in the middle of a major shift toward oil in its fuel mix: from 29 per cent in 1965, to 36 per cent in 1975 and a likely 39 per cent in 1980, by which time Russian automobile ownership will be at a much higher level than now.

...the days have long since passed when Russia could disrupt Western oil markets with its exports, as happened in the late 19th century.

Inevitably, therefore, increasing attention is being devoted to alternative fuels. Of course, output of gas is growing the fastest and reserves are enormous. Russia has over a third of the world's known gas reserves. Big scope exists for increasing output.

But the gas industry has had more difficulty in meeting its targets than the oil industry. Moreover the location of Russian gas reserves throws up some of the same problems as exist with oil. The older, nearer and easier fields have been fully developed. Again it is the remoter regions (West Siberia especially) that are having to provide the growth. But with gas, distances are far more costly than with oil, as gas costs something like five times as much to move as oil for a given heat content.

Some gas deposits (East Siberia, for instance) are too remote to be worth moving to the central Russian areas at all. Development of other deposits requires huge capital outlay, with relatively small economic benefit emerging only much later. By 1980 the share of gas in the energy mix therefore is estimated to grow only slightly above its 1975 proportion of 22 per cent.

Coal

With coal, Russian reserves are probably even more plentiful. But they too are situated huge distances from the markets. To get them out, heavy costs would have to be borne to establish permanent working communities in remote regions—in a country that is now suffering a growing labor shortage—and infrastructure would be needed for these settlements, and for transporting the coal to the consuming regions.

These problems explain why Russia has been exploring the scope for cooperating with the West. On a modest scale a scheme seems to be going ahead for the Japanese to help in the development of Siberian coal resources. But nothing has come of the Japanese-American project for moving West Siberian oil to the Far East coast: the quantities of oil the Russians could offer proved to be far too small, besides other problems over finance and the Chinese attitude. Most spectacular are the pending projects to move Siberian gas to Murmansk and the Far East coast for LNG shipment to the United States and Japan.

Exports

But neither of these looks feasible on economic criteria at present, unless large subsidized credits were made available from the West, if then. By contrast, piped gas to West Europe has made good progress. Here the Russians not only exchange gas for Western equipment; they also buy time, in that the gas is not delivered until some years after delivery of the equipment. Beyond this some Western oil companies are to assist the Russians with off-shore technology. But it is now clear that Western cooperation offers the Russians no easy escape from the tightening of energy supplies they will face in the 1980s.

Consequently, changes are now under way in the pattern of Russian oil trade. Russian oil exports to the West rose sharply in 1975, when the country was short of hard currency. Russian oil imports from the Middle East (including repayment of loans to Iraq) rose by a smaller amount. This year Russian oil exports to the West are up again, perhaps because Moscow is being influenced by growing unease in the West about the size of Soviet foreign debt.

But supplies to Russia's partners in Comecon are being pegged, or reduced. East European countries are now also being made to pay hard currency for some of these supplies, and much higher ruble prices (reflecting the jump in world oil prices) for the rest. Increasingly they are being forced to buy from the Middle East instead (hence the Adriatic pipeline to Hungary and Czechoslovakia now under construction) for bartered goods, or for cash. In 1980, or soon after, Russian oil exports to the West will be matched by the oil imported by Russia and its Comecon partners together. Comecon will then become a net oil importer on an increasing scale.

The oil-price revolution has drastically altered the balance of economic power between Russia and its smaller Comecon partners.

To meet their energy requirements they must now exchange vastly increased quantities of manufactured and other goods with Russia itself or with the hard-currency world. At today's world energy price levels Russia continues to exert powerful economic and political leverage even by supplying only a diminishing proportion of East European oil and gas needs for ruble payment, as the cost of replacing these ruble supplies with hard-currency oil and gas imports is now so much greater.

Russia itself, as a net exporter of oil and gas, has gained handsomely in the short term. But its long-run energy prospects now look far more ominous, as it looks forward to the time when its net flow of oil and gas exports shrinks and eventually gives place to net imports, at possibly increasing real prices, during the later 1980s.

—A.P.

EEC's Policy Blocked by Nationalist Interests

(Continued from Page 11)

some external source (such as imported coal) will increase, not diminish. Even in 1971, imported oil provided 62 per cent of Western Europe's energy, and 59 per cent of that of the Community of Nine. By 1985, this figure was projected to rise to some 70 per cent of community needs.

This dependence grew out of the mixture of cheap and plentiful energy provided for the EEC by the oil companies. The EEC took the easy road they offered towards an economy built on a wasteful squandering of the world's oil resources and neglected other sources of energy that appeared more costly. All this is well known. Severe shortages of oil will mean many difficult years of adjustment, with grave social and economic problems. There is no substitute for imported oil in the short term. While self-sufficiency is a possibility for the United States but only with difficulty and at immense financial cost, for Europe such independence is inconceivable in the foreseeable future.

This means that Europe is committed to purchasing a major part of its energy needs on the world's market. It is committed to the future of international trade and its proper conduct. And it means that Europe's economic destiny is tied to the specific actions of the quite limited number of countries who determine the evolution of the world market in energy. In the world market for oil the number of major participants is quite small. So far as Europe is concerned a small number of Arab states provide 73 per cent of its total oil import requirements.

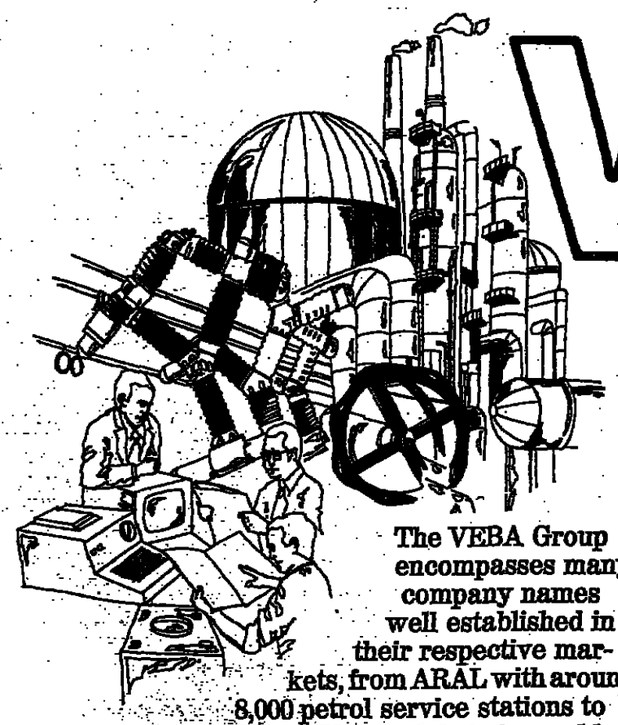
After the outbreak of the crisis the admirable and forceful energy commissioner Mr. Henri Simonet said that it was time for the community to lay down specific objectives for a common energy policy—rather than simply make forecasts about the future. A draft resolution, outlining the community's supply pattern for 1985, was therefore submitted to the council, which adopted it in December 1974.

The main aim of the resolution is to reduce the community's energy dependence which stood at 63 per cent in 1973, to below 50 per cent and, if possible, to 40 per cent. Such a reduction would make for greater security of energy supplies and reduce the burden which the increased price of imported oil had placed on the Nine's economies and terms of trade.

The objective is to alter drastically demand patterns for primary energy between now and 1985. On oil, for instance, the Nine hope to reduce their current dependence from 64 per cent to between 49 per cent and 41 per cent. The EEC is also trying to reduce oil imports by maintaining coal production at present levels and speeding up the development of nuclear energy as an electricity source.

Two general policy decisions taken by the EEC Council which have proved their worth are the creation of a community energy committee and the regular stock-taking of the overall energy situation in the community. These two policies constitute the only real concrete follow-up given to the decisions taken by the heads of state and government of the Nine at the December 1974 meeting. The energy committee meets regularly and has played a very useful role in the preparation of proposals made by the commission. It has turned out, however, that the contact between the commission and the Nine's experts (who form members of the committee) does not always guarantee the adoption at the political level (i.e., the ministers) of measures which have been proposed with their help. As for energy stock-taking, its confidential nature guarantees the commission improved access to information and enables it to keep a watchful eye on energy supply and consumption in the community.

In parallel with these arrangements, the EEC is also involved in subsidizing research and development projects on which private companies have embarked. It is one thing for the community to have reserves—such as oil and gas—but quite another bringing them to the surface. It is estimated that oil reserves under the North Sea amount to 2.4 billion tons while recoverable reserves of natural gas are probably in the region of 3,820 billion cubic feet.



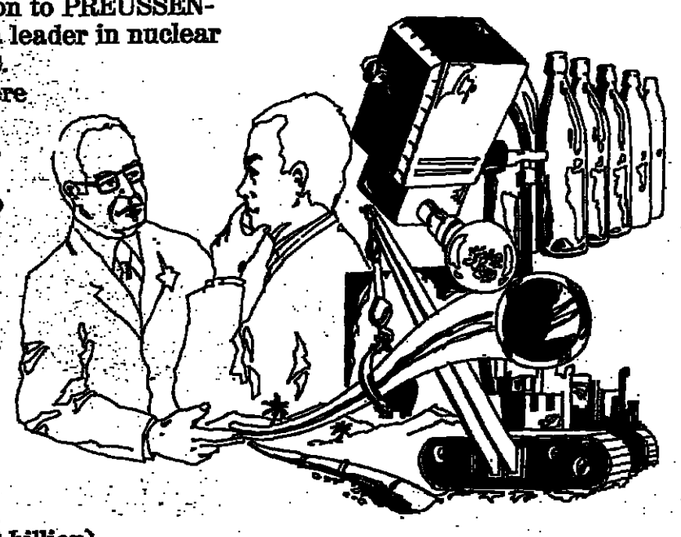
If this energy potential is to be realized, considerable technological problems will have to be overcome. Offshore production of hydrocarbons (oil and gas) is difficult, dangerous and costly. The North Sea oil and gas fields are located in deep water where weather conditions are often bad and where production and transport problems are almost insurmountable.

To encourage companies to carry out the necessary research and development, risks have to be minimized or made acceptable. One way of doing this is to provide "risk" or "venture" capital as a financial aid or incentive to development. In other words money is provided to help in research and development which, under normal circumstances (that is, without extra financial support or guarantees), would not be considered justifiable in the light of the risks involved. This is where the community has stepped in.

Meeting in November 1973 as the oil crisis was beginning, the EEC Council of Ministers adopted a regulation providing for financial support for community projects in the hydrocarbons sector. This support was intended to promote technological development activities directly connected with prospecting for, producing, storing or transporting hydrocarbons likely to guarantee community energy supplies and accelerate the development of its hydrocarbon resources.

In general it was considered that, since these projects would involve technical risks and heavy costs, financial support from the community was necessary to keep their development from being blocked or delayed. Thus, the community planned to provide venture capital for projects offering reasonable prospects of success—projects sponsored by EEC companies and other organizations. Agreement on the first community financial support in the hydrocarbons sector was reached last year when EEC energy ministers meeting in Brussels agreed to grant community aid worth 42.5 million units to finance 21 projects. This community support will take the form of guarantees on loans or subsidies repayable under certain conditions (that is, if the projects turn out to be a success).

However laudable these and other EEC energy policy ambitions might be, it has to be admitted that this area of policy making has still not assumed the full importance necessity demands. Of course, any energy policy must be put into the context of other policies—economic, financial and monetary and social. In all these areas there is still a lack of community cohesion. What will happen if there is another energy crisis? It is to be hoped that the European Community will not fumble as it did on the last occasion.



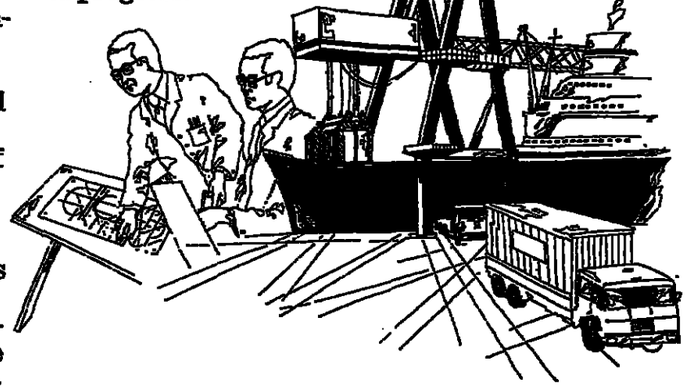
VEBA

Our Group's Sources of Strength – Energy, Manufacturing, Trading and Transportation.

The VEBA Group encompasses many company names well established in their respective markets, from ARAL with around 8,000 petrol service stations to STINNES, specialists in worldwide trading and transportation, from DEMINEX, active in global oil exploration to PREUSSENELEKTRA, a leader in nuclear power plants. All in all, there are several hundred companies that make up the VEBA Group, one of Germany's top industrial concerns, with an annual turnover in excess of DM 25 billion (1975 DM 24.8 billion).

During the first six months of 1976 turnover of production increased by 16.6%. This includes among others petro-chemicals and organic products, plastics, fertilizers and hollow glass.

The turnover of the service sector comprising trading and transportation as well as freight forwarding and handling, ocean and inland shipping and the pioneering of new markets was up by 11.8%.



VEBA's paramount activity, electricity generating and supply which regularly absorbs more than 70% of total group investments, achieved a 19.2% increase in output during the first six months of this year. In this sector, VEBA's more than 70 years of experience in power station planning and construction play a major role and its traditional energy sources coal, oil and gas are ideally complemented by its advanced technology in nuclear power generation.

Overall the Group achieved a profit increase of 104% in the first half, reaching a total of DM 96 million.

The Group's immensely broad base makes it an ideal partner for joint-venture projects on a national and international scale and its engineering know-how in specialized fields can be of invaluable benefit to its business partners.

Here, experience in uranium enrichment, manufacture of fuel elements, recycling of atomic fuels, and transport of radioactive material as well as the development of disposal methods for nuclear waste, are of specific importance.

With 1.2 million shareholders, more than any other European company, the VEBA Group draws its financial strength from the full spectrum of German economic life, and as one of the foremost energy concerns in the country, it is particularly responsive to the needs of progress.

VEBA

Energy is our Business

Industrialized Nations Slow to Set Up Conservation Policies

PARIS (IHT).—There are two ways in which consumer countries can reduce their dependence on energy imports. They can increase the role of indigenous energy in total consumption or they can reduce demand for such imports by energy-saving policies. When the International Energy Agency (IEA) was set up in November 1974, its members decided that both techniques would have to be used if Western countries were to restore some balance to the oil market. Supplies would have to be increased through increasing production of indigenous resources and intensifying research into alternative forms of energy, demand eased by reducing the extravagant consumption habits that had developed during the cheap oil era.

During the first months after the oil crisis, Western energy experts believed that the very increase in oil prices would be enough to turn the current sellers' market in oil into a buyers' one. In a study published by the Organization for Economic Cooperation and Development (OECD) at the beginning of 1975, "Energy Prospects to 1985," forecasters at the Paris-based organization claimed that the present price of oil would result in such an increase in indigenous supply and such a cut in demand growth that by 1985 consumer countries would have reduced their dependence on energy imports to only 20 per cent of total energy requirements, compared to some 35 per cent in 1972. With a very special effort in production and conservation, which the forecasters did not consider likely, almost complete independence of imports could be achieved.

According to the report, if oil prices remained at current levels (expressed in the report as $9 in 1972 prices) the OECD countries' total energy consumption would rise to 5.6 billion tons of oil equivalent in 1985 from 3.4 billion in 1972, while indigenous supplies would reach 4.4 billion from 2.2 billion. If special efforts were made over and above the automatic result of a higher oil price, supply could be as high as 5 billion, due largely to increased indigenous oil and gas production, while demand could be cut to between 5.4 to 5.1 billion. In this scenario dependence on imports would fall as low as seven to two per cent.

Oil Imports

But what everybody is really worried about is the OECD's dependence on oil imports. For not only is there a limit to the rate at which producers are ready to extract their crude, but there is also the prospect of world supplies running out altogether. Under the OECD's long-term projection, indigenous oil supplies were expected to reach 1.3 billion tons of oil equivalent on the basis of present prices compared to 662 million in 1972. In total, oil consumption was expected to reach 2.3 billion compared to 1.8 billion in 1972, resulting in oil imports falling to 1 billion from 1.16 billion in 1972. Imports at this level, some 20.7 million barrels a day, would be enough to turn the sellers' market into a buyers' one.

Two years after that report was published it is becoming clear that consumer countries will get nowhere near the 20-per-cent dependence target for total energy imports, let alone the virtual self-sufficiency envisaged by OECD's crystal gazers. But what is much more worrying is that imported oil requirements may exceed what the OPEC countries are even ready to produce. With indigenous energy supplies now only expected to reach little more than 3 billion tons of oil equivalent, less than what had been expected had there been no oil crisis, and demand only marginally down at just over 5 billion, largely as a result of slower economic growth, dependence on imported energy as a whole is expected to be nearly 40 per cent. On present demand projections oil imports would pass the 1973 levels of some 26 million barrels a day to reach 35 million. And even that assumes that nuclear programs are maintained at present levels and that the United States relaxes its price controls on oil in 1979.

When the demands of non-OECD countries are taken into account, there is no way in which such oil import requirements could be met unless Saudi Arabia agreed to push its production well over 10 million barrels a day. But Saudi authorities have stated that they have no intention of raising output beyond around 8 million barrels a day. Unless something dramatic is done, consumer countries face another sizable oil price increase, if not a complete cut-off of supplies.

Exaggerated Potential

So what went wrong? It seems that the main reason why indigenous production is not going to be as high as expected is because U.S. energy experts, and as a result OECD forecasters, exaggerated the oil and gas potential of the United States. With United States oil output in 1985 now expected to be less than 12 million barrels a day compared to 18 million, overall OECD supply may be less than 19.5 million compared to 26.7 million originally forecast. U.S. gas output is expected to be less than 440 million tons instead of 580 million, bringing overall OECD supply to less than 700 million compared to more than 1 billion. In the case of coal and nuclear energy the cutbacks are due to a slowdown in demand and environmentalist opposition, but U.S. output is expected to be only 580 million compared to 660 million, bringing overall OECD production to 938 million from 998 million. In nuclear energy, 1985 capacity is only expected to be 450 million tons compared to 756 million, largely because of slippages in U.S. programs.

On the conservation side some definite progress has been achieved, but it may also prove to be an illusion. According to a recent IEA report "Energy Conservation," total IEA energy consumption in 1975 was 4.8 per cent down on 1973 levels and 14.3 per cent lower than what had been expected before the oil crisis. Realizing that skeptics will argue that these savings were only achieved because of the recession, IEA economists have shown that virtually all members succeeded in reducing their energy consumption in GNP terms. A fairer assessment of the IEA performance would however have taken into account the even sharper fall in industrial consumption, which is a major source of energy consumption.

Unless something dramatic is done, consumer countries face another sizable oil price increase, if not a complete cut-off of supplies.

Industrial Consumption

The real success of conservation programs will only become apparent this year and next when industrial production recovers. Last year the consumption of industry, which represents 37 per cent of total energy demand, was still 11 per cent below 1973 levels, while transport and residential/commercial sectors, which accounted for 27 and 36 per cent respectively, were almost back to their levels two years earlier. Transport and commercial/residential are sure to exceed their 1973 levels this year, but the great question is whether economic recovery will lead to a particularly sharp increase in industrial consumption.

In the first panic of the oil crisis, Western governments introduced a whole series of spectacular measures aimed at driving home the critical supply situation. There were carless Sundays, restrictions on shop lighting, reductions in heating, cancellations of motor rallies and early close-downs for television programs. But since then the IEA has adopted rather more long-term policies with the main priority of reducing oil consumption.

In the transport sector the United States has set an example by limiting motoring speeds to 55 miles an hour, but its cars still consume almost twice as much per mile as European models (although manufacturers are expected to introduce more economical cars from 1980) and drivers continue to benefit from extremely low gasoline prices. In Europe where cars are less extravagant in their consumption and gasoline prices are very high, speed limits are not always fully respected. Between 1973 and 1975 the worst performers in the transport field were Japan, West Germany and Canada; the best, Britain, Holland and the United States.

In the commercial/residential sector a succession of mild winters has been the main cause of energy savings, though some conservation has occurred through the higher prices charged. Governments are concentrating on making sure future houses are insulated properly, which could reduce consumption by as much as 50 per cent, but it is not always easy to reduce consumption in older houses. Worst performers in this field have been Italy, Holland, Canada, Denmark and Spain, the best, West Germany and Japan.

In the industrial field the main energy consumers are heavy industries like iron and steel which alone account for eight per cent of total energy consumption, aluminum production and chemicals for between six and seven; pulp, paper, glass, cement and building industries for two to four per cent. Several governments are encouraging these industries to adopt energy saving equipment without losing their trade competitiveness. Performances in the industrial field are difficult to assess in view of the different growth rates of member countries, Japan, West Germany, Holland, Sweden and Belgium did less well than the United States, Canada, Britain and Italy. Only Spain actually increased its consumption.

Just as on the supply the role of the United States is all-important, it is equally so in conservation. U.S. energy consumption last year was 12.7 per cent down on what had been anticipated before the oil crisis, but on a GNP basis it was one of only three countries that did not actually achieve any basic energy savings during this period. Characteristic of the U.S. failure to take conservation too seriously has been the inability of the government to bring oil and gas prices up to market levels.

When the IEA issued its report on energy conservation, some concern was expressed as to whether governments were really prepared to take energy conservation seriously. Noting that most countries considered supply expansion more important than energy conservation, the agency claimed that investments required to achieve energy savings would have a higher return and thus a more positive effect on gross domestic product and employment than many of the supply expansion alternatives being considered by its members.

It is significant that in its latest proposals to reduce anticipated oil imports in 1985 by 11 million to 24 million barrels a day, conservation is expected account for 5 million. Amo measures proposed are redu gasoline consumption, for tax credits for installing ene saving equipment, better ins tion for new houses and the ing of price controls on oil products. On the supply s which is to bring in six mil members are urged to spe the award of offshore explo licenses, push ahead with tion and development in shore field, subsidise tech for increasing oil recovery any obstacles to the buildi pipelines, give greater pro nuclear power and introduce ket prices for energy. For moment, there is a chance that the IEA will that extra oil than that it secure the extra supply.

—M.P.

Uncertain Future for Oil Majors

LONDON (IHT).—The heyday of the international companies was the period between the wars. Exxon and Shell were multinationals 50 years before the word was invented. British Petroleum, with its vast supplies from Iran, soon followed, later reinforced by supplies from Kuwait, with its partner there, Gulf Oil. Texaco and Standard of California went international when Saudi Arabian crude began to flow in quantity. And the seventh sister, Mobil, emerged from the break-up of the old Standard Oil trust with several of the overseas bits of the old empire.

These integrated oil companies search for, produce, refine and sell oil products all over the world, spanning the world with their organization and distribution systems, smoothly and quickly balancing up demand for different types of products and crude oil. Large, integrated self-sufficient organizations, protected from government pressures by their size, expertise, internationality and commercial élan, the companies have aroused awe, suspicion, admiration and hostility.

After the war the legend persisted, but the reality began to change. As oil became more important globally, governments became more assertive in several ways. European governments began to ask awkward questions about the prices charged by the majors to their European subsidiaries. These worries soon gave place to others as Middle East production built up during the 1950s. Consuming governments became uneasy about their growing dependence on cheap fuel imported from an unstable region of the world.

Consequence

But the surge of cheap oil was partly the consequence of the fact that the grip of the majors on the upstream end of the business was beginning to slip. Independent American companies had muscled in. So had state-backed European national companies like Italy's ENI and the French Elf-Erap. And, by forming OPEC in 1960, producing governments made sure that the oil glut did not eat into their revenues, but entailed merely lower profits for the companies.

In the 1960s the majors' predominance was under challenge from newly-assertive producer governments, by competition from independents, and by an increasingly watchful attitude by consumer governments, as oil became their industrial lifeblood.

In 1970 the pattern changed abruptly. The producers were able to negotiate big improvements in their concession terms. Suddenly the companies looked weak and helpless. The producers got the message.

In 1973 new terms (prices) were imposed without a pretense of negotiation. And by this time moves were afoot for the producing governments to take over the production altogether, relegating the companies to the role of buyers, and the providers, of specialist expertise.

The companies still own the tankers, and refineries and the gas pumps. Above all they have the crucial expertise to ensure that the right oil is at the right place in the right quantities at the right time. They also have the financial strength for the increasingly costly job of exploration, which entails pouring millions of dollars down a row of empty holes, with no certainty that there will be a full one.

Criticism

Crucial though this service is, the fact remains that—with an incipient world oil shortage—mere possession of the downstream facilities does not give the companies any bargaining power over the oil price. In consequence they have become a focus of criticism; in America, the companies are accused of making OPEC's cartel work.

In fact, in the last two years the companies have shown considerable alertness in switching their buying from one OPEC crude to another, in accordance with small fluctuations in values and prices of various crudes. But so long as the whole system is underpinned by Saudi Arabia, there is clearly not the slightest chance of this market activity exerting any pressure on the OPEC price.

Inconveniently, the 1973-74 price-jumps hugely boosted oil companies' book profits—at a time when motorists were lining up for hours for gasoline. The shortages, the profits and then the unexpected non-collapse of OPEC in 1974-75 served to awaken all the lurking antagonism toward big oil in the American collective subconscious.

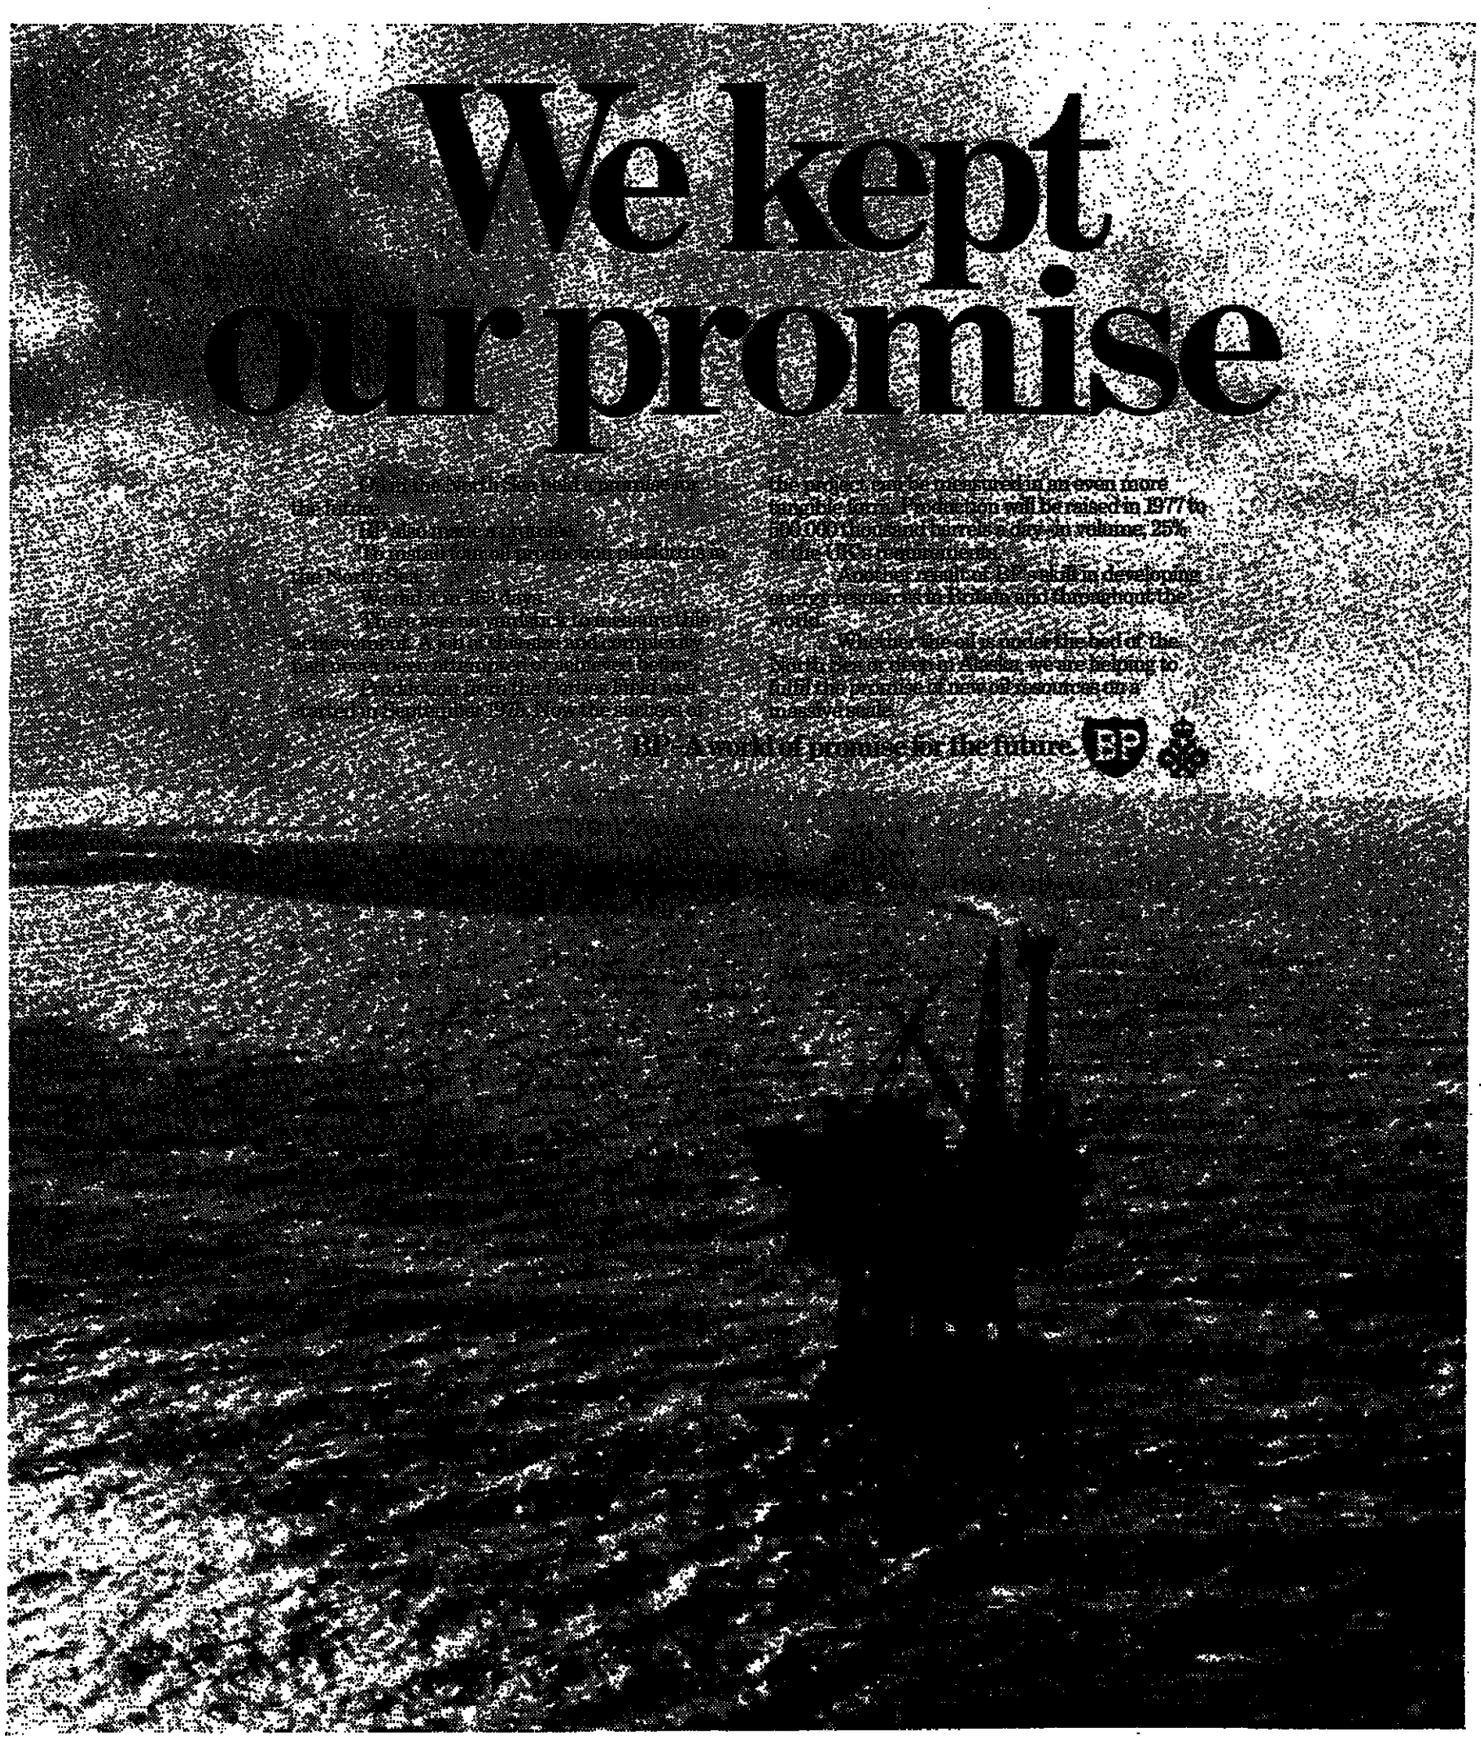
Hence the price controls, which have held down American oil prices below the world market levels; hence the loss of tax reliefs, and hence the campaign to split up the big companies. This campaign now seems to have run out of steam, though Mr. Carter has guardedly shown interest in at least making the oil giants get out and stay out of the business of competing fuels.

Outside America the influence of the majors continues to shrink. The disappearance of the oil-glut has stifled the competition they suffered from the independents (and provoked conclusive official inquiries West Germany and the Europe Community).

But they now face on the o hand the advance of the natio companies of the producer and now moving into tankers a with plans to set up exp refineries. On the other they face state-owned or state backed national companies consuming countries, which being edged into more prom positions in their local mar (such as France); these are given the inside track in producing areas as with Sta in Norway, the British Natio Oil Corporation in Britain, a more hastily, Petrocan in Canad

All this leaves the future of majors more cloudy than it h been at any time in the l 50 years. Some reckon that the future vocation lies in concentrating on the role of handli the logistics of matching up p duction and demand; global Shell—which started life as middleman in the oil business is the major most associated w this idea. The cap would, a fit that other one-time middl man, Exxon.

Others see themselves perha as essentially providers of energy British Petroleum, which beg life as a producer and is envied for its exploration might see things this way.



A third concept would be the majors to evolve into no broadly-based international bus ness organisations, not confin themselves to oil. Mobil is t major that comes closest to th concept.

These might be the three mai ways the majors might evolve future for themselves. Meanwhi the more far-sighted of the have other worries. Unless t companies can preside ov smooth adjustment and evoluti in the world oil economy th will be attacked. Big upheava like 1973-74 are blamed on t majors. Some oilmen see a vast bigger upheaval not more th 10 years away.

Unless the world adapts so to the fact that its oil reserv are already being burnt up almo as fast as they are found, th the consumption rate is still risi ominously, that future finds w be increasingly expensive and th alternative sources are being d veloped too slowly, there will a violent adjustment sometime the 1980s, with shortages, a soa ing price or both together. A for this the oilmen will cert certainly be blamed.

Hence the urgent and ev slightly frantic warnings fro companies like Exxon and She to consumer governments to d something now.

Future Energy Possibilities—Science Is Working on Them

By Barbara Burke

PARIS (IHT).—The sun, the wind, the earth and the sea are "new" sources of energy that supply man to the end of time with energy safer than nuclear energy, cleaner than oil or coal.

But it will probably be 25 years before these sources begin to make significant contribution to our energy needs.

Which of these sources is the most promising? Not everyone agrees, but solar energy comes up often. It is clean and inexhaustible. But it is also diffuse and unreliable. The sun sets at night; it goes behind clouds. And the cost of collecting solar energy—and especially, of storing it—is a problem.

Solar energy is most easily used to heat buildings or water; despite its initial cost, in the long run it is competitive with traditional systems, at least in reasonably sunny areas. The principle is that of a greenhouse: the collectors let in the maximum amount of energy while trying as little as possible escape. Reclaimed energy can also be used to cool buildings, using the principle of the refrigerator, but this is trickier because higher temperatures are required.

The biggest solar heating unit existing now is an International Energy Agency project in Wiehl, West Germany, where 1,100 square meters of solar collectors on the roof of an ice rink heat an adjacent swimming pool. France is working on the use of solar energy for a number of public buildings, including the airport at Nice. The United States plans to spend $50 million between 1975 and 1979 on demonstrations of solar heating and cooling. It is estimated that with a strong solar energy program, solar energy could supply 35 per cent of the thermal needs of buildings in the United States by the year 2000.

Producing electricity is more difficult. There are two basic approaches. Sunlight can be converted directly into electricity by photovoltaic cells, with an efficiency of five to 20 per cent. (These devices are used in the light meters of cameras.) Or it can heat a fluid (water, for example) to drive a turbine in a conventional manner. To concentrate the sun's rays on the fluid, special mirrors can be used called heliostats, which follow the sun.

The most grandiose idea for the production of electricity is a photovoltaic power plant in space, 36,000 kilometers from earth. Forty or sixty square kilometers of photovoltaic cells would produce about five gigawatts (five billion watts) of electricity, which could be converted into microwaves and beamed back to earth. The problem is what would happen to someone who strayed into that gigantic microwave beam.")

But far less ambitious projects on earth already have problems. Photovoltaic cells now cost about $20,000 per kilowatt electric, just for the cells alone, so in the near and medium term, solar electric power plants will rely on the heating of fluids to run a turbine. Several 10-megawatt pilot plants are being planned in France and the United States.

But even these plants may be prohibitively expensive. Robert Hirsch, assistant administrator for solar, geothermal and advanced energy systems in the U.S. Energy Research and Development Administration (ERDA), recently told an ERDA committee that to bring costs down to $1,000 per kilowatt electric, one would have to make heliostats that cost only $100 a square meter—less, he said, than the cost of some billboards. And he said that even if one did that, the cost of energy storage to ensure reliable service might inflate the costs to $3,000 or even $7,000 per kilowatt electric.

Wind:

Dr. Dieter Renz of the International Energy Agency says that along with solar energy, the wind is the most promising new source in the short term, although not on a large scale. Like solar energy, wind energy is clean and plentiful, but unreliable. Yet, conveniently, it is more abundant in winter, when energy needs are greatest: Europe is twice as windy in winter as in summer.

The biggest wind turbine, a 1.3-megawatt device, was built in 1941 at Grandpa's Knob in Vermont; it was abandoned after blade failure four years later. Small wind turbines are now commonly used to light beacons at sea, and a number of 100-kilowatt test turbines exist. The United States and West Germany are discussing plans for a one-to-three megawatt turbine—"like the Eiffel Tower with a propeller," Dr. Renz said. The output of even such a giant device would be peanuts next to a modern 1,000-megawatt nuclear power plant. But still it has been estimated that by the year 2000, the wind could supply 10 to 15 per cent of the United States' electricity.

Geothermal:

The earth contains enormous amounts of heat, produced by the decay of radioactive material. Some of this heat comes to the surface when a volcano erupts, or in geysers like Old Faithful in Yellowstone National Park. In other places it exists at relatively shallow depths in the form of hot water.

Geothermal hot water already heats more than 90 per cent of the homes in Reykjavik, Iceland; in 1973 in Hungary, it heated 1.5 million square meters of greenhouses. The use of geothermal energy for direct heating in the U.S.S.R. is thought to be equivalent to one million tons of fuel oil a year.

One of the most ambitious programs for geothermal energy is in France, which has good supplies of low-temperature geothermal hot water, much of it conveniently in the Paris area. The French New Energy Sources Agency attaches nearly equal importance to geothermal and solar energy; director Jean-Claude Colli expects half a million homes, or their equivalent, to be heated by geothermal energy in 1985.

Producing electricity requires higher temperatures than those needed for heating; this can come from steam, from hot salty water, or from hot dry rocks. Electricity is already being produced from geothermal steam in Italy, the United States, Japan and New Zealand.

Unfortunately, the most plentiful source of geothermal energy is hot, dry rocks, which require the development of new techniques. At ERDA's Los Alamos Scientific Laboratory in New Mexico, researchers are experimenting with a technique borrowed from the petroleum industry.

Called hydrofracturing, it consists of pumping water under high pressure down a hole to crack the hot rock. A second hole is then drilled, and cold water forced down one hole seeps through the crack and returns hot to the surface, through the other hole.

But whatever source is used, there is a pollution problem; the water or steam that comes to the surface contains large amounts of salts and minerals, and some noxious gases.

The total world installed geothermal electricity generating capacity is now about 1,000 megawatts; estimates for the United States alone in 1985 range from 5,000 megawatts to 30,000 megawatts, much of it in the Western states. Other countries with good supplies include Mexico, New Zealand, the Philippines, Indonesia, Taiwan and Turkey.

Biomass:

Man is turning to the conversion of solar energy relatively late; green plants have had the trick for ages. Each plant is a miniature solar energy converter, turning carbon dioxide, water and sunlight into sugar. We consume that converted solar energy when we eat; we also use it when we burn wood, coal or oil.

Researchers are now working on new ways of using that energy—converting plants and organic wastes into gas, oil or methane either by oxygen-free fermentation, or by heating them under special conditions. Unfortunately, fuels so far produced this way are not competitive.

One problem is that green plants convert solar energy with an efficiency of only about one per cent; researchers would like to increase that to three per cent. But even then the growing of plants for energy on a large scale requires lots of land, which might compete with food production. And the costs of cultivation, harvesting and transportation are such that some experts consider biomass a "fringe technology."

It might, however, be important for countries with large uncultivated land masses; it has been theorized that Sweden could free itself from oil imports by cultivating fast-growing trees. And the use of organic wastes to produce energy is interesting, since you have to get rid of the wastes anyway.

The Sea:

The United States, which has some warm territorial waters, is working on "thermal gradients." This technique uses the difference in temperature between the warm surface water and the cold water below to drive a fluid to power a turbine. ERDA is planning a one-megawatt pilot plant, to be followed by a larger one. The problems are cost and corrosion. Also, because the temperature difference is not great, the process is only about three per cent efficient.

Tides have been used to generate electricity at the Rance estuary, near Mont Saint Michel in France, for several years. But high costs, the environmental impact, and the scarcity of good sites will probably discourage the use of tides—which in any case are estimated to have a potential of no more than two per cent of the world's total hydro potential.

Interest in waves is strongest in the United Kingdom and Japan.

Fusion:

Fusion is a gamble. If it works, it could eliminate the energy crisis once and for all. But no one knows whether it will work; and if it does, it will be at least 25 years.

Present-day nuclear power plants rely on fission, the splitting of atoms. Fusion is the opposite: the nuclei of two small atoms are joined together to form the nucleus of a larger atom. In the process, a bit of mass is converted into energy. Fusion powers the sun—so, in a sense, it is already the source of almost all our energy supplies. It is also the basis of the hydrogen bomb. The problem is to reproduce it in a controlled, continuous way.

There are now two basic approaches. In one, hot gases are contained within a doughnut-shaped device by a magnetic field. Major projects exist in the United States, the U.S.S.R., the EEC countries and Japan using the tokamak, the most widely-used approach to magnetic confinement today.

In the other approach, called laser implosion, gases in tiny pellets are bombarded with laser beams.

In either case, sea water provides virtually inexhaustible amounts of deuterium for use in fusion machines.

But even if physicists succeed in achieving self-sustained fusion—which could be achieved in the next ten years—the job will not be over. At that point, engineering problems would have to be overcome before the process could be economical. And this could easily take until the end of the century.

Electricity Use Could Be More Efficient, Less Costly

PARIS (IHT).—The trouble about electricity is that it is an extremely inefficient way of supplying energy. It may be convenient, clean and easy to use, but it is extremely wasteful of the energy sources required for its generation. When gas or oil are used directly for heating purposes, between 60 and 80 per cent of their energy is applied, but when these fuels are used to generate electricity, the output is only 40 per cent, or even less.

If consumer countries are to reduce their dependence on oil and gas imports, they will have to develop other sources such as hydro, nuclear, coal, geothermal and even solar energies, which can only be applied indirectly through electricity generation. For every kilowatt produced by a nuclear or coal power plant, at least two kilowatts of energy is lost in the atmosphere. For every kilowatt of solar power produced, the waste can be four to six times as much.

Technologically there may still be some scope for increasing the energy productivity of primary fuels in electricity generation. Under some experiments energy output has been as high as 60 per cent. There are also tremendous opportunities for using the waste heat discharged in the form of heated water for district heating purposes. Countries like Sweden and Denmark are doing this, but in general public opinion is opposed to the construction of power plants near urban areas, a condition of any such system.

Night Production

There are also possibilities for using power plant capacity more effectively by accumulating electricity produced at night, when demand is low, for use during the day, when demand is high. But for the moment, at least, it looks as if consumer countries will be forced to rely on a form of energy which is by nature wasteful of primary energy, losing power according to the distance it is transported and cannot be stored.

Originally electricity was made out of cheap hydro power. This is the reason why countries like Norway, Sweden, Switzerland and Canada have benefited from such cheap energy. But the number of sites for hydro schemes is limited, and coal soon emerged as the main source for electricity generation. With the arrival of cheap oil and gas supplies during the 1960s, these fuels assumed an increasingly important role and by the 1970s nuclear power looked as if it was going to take over.

By 1974 hydro accounted for 23 per cent, nuclear for five per cent and fossil fuels for 73 per cent of which coal represented 51, oil 30 and gas 19 per cent. By 1985 hydro was expected to be only 15, nuclear 35 and fossil fuels 50 per cent of which coal would represent 54, oil 35 and gas 11 per cent.

It was already clear at the time of the oil crisis that utilities would remain very dependent on oil well into the 1980s. A large number of power plants fueled by oil were already in existence and several more were in the process of being built. But nobody anticipated the slow increase in electricity demand that followed. Private householders slowed down their consumption in response to increased tariffs and soon afterwards industry slashed back its requirements, partly because of the increased cost, partly because of slowdown in activity.

With under-utilized electricity capacity, utility companies were often forced to further increase their tariffs to keep afloat, resulting in further discouragement of consumption, while the prices of competing energy sources such as gas and domestic fuel oil were often held below their market levels. The result was a general disenchantment over the whole concept of "all-electricity" homes, a deterioration in the financial situation of the utility companies and a resulting cutback in investment plans.

Slowdown

Although the slowdown in the growth of electricity demand has occurred in a general flattening out of energy expansion, there is now a very real danger that utilities will delay their investment programs so long that they will no longer be able to turn to nuclear plants for any demand increases in 1985, and instead of falling back on coal, they will once again resort to fuel oil. That is why governments of consumer countries, especially the United States, should define their overall energy policies as soon as possible and why the International Energy Agency wants its members to undertake the construction of no more oil-fired power stations.

Of course, consumer countries could reverse current trends and actually reduce the role of electricity in total energy requirements. If oil and gas are going to account for as much as 40 per cent of electricity generation in 1985, it might be wiser to use these fuels directly and more efficiently. To judge by the pricing policies practiced by some Western governments, some countries are already moving in this direction. On this argument consumer countries are going to be dependent on the pricing whims of OPEC whatever happens and there is therefore little point in investing huge sums in electricity capacity, let alone in nuclear or coal power plants.

But if oil and gas are probably cheaper than electricity for heating purposes, there is still an enormous range of applications for electricity which cannot be fulfilled by any other energy source. Electricity is also the only way in which the future energy sources upon which we have pinned our hopes can be used. Solar, wind, tides, fusion—their energies can only be captured through electricity generation. This is why the world is virtually committed to becoming an all-electricity society.

The electricity option as such just cannot be abandoned. But much fuller use could be made of the energy produced. At the moment 60 to 70 per cent of the energy produced by a coal, gas oil or nuclear plant is wasted, 75 to 85 per cent in the case of solar. That energy could be used for district heating if only people would agree to having power plants built near urban centers.

Generating capacity could also be used more efficiently by sharing out the electricity load between different power stations and introducing accumulation systems which store electricity overnight for use during the day. Electricity generated at low-demand periods could be used to create further energy potential as when water is pumped upstream during the night in some hydro complexes.

Finally, the storage and transport problems posed by electricity could be overcome through the manufacture of hydrogen. In the end these savings could prove to be more important than most of the new energy sources that are so often mentioned.

Ruhrgas in the International Energy Market

Ruhrgas supplies natural gas to an extended market in the Federal Republic of Germany. We do this through our widely ramified pipeline system.

Ruhrgas concluded several important natural gas import agreements and is involved in other current import projects for natural gas.

Ruhrgas is a recognized partner in the international natural gas business.

RUHRGAS AKTIENGESELLSCHAFT · ESSEN

We take Care of Ruhrgas Natural Gas

Economy: Dwindling Reserves, Little Progress on New Sources

(Continued from Page 11)

distribution and consumption patterns throughout the world. In the article on oil we observed the huge deficits between production and consumption in the Western world, including the United States, with the bulk of reserves held in the less developed countries of the Middle East, Africa and the Soviet Union. The second table (P. 11) compiled by the U.K. Department of Energy from a variety of sources indicates in broad terms the geographical distribution of reserves in the four main fuel sources (billions of tons of oil equivalent).

The exploitation rate of even "proved and recoverable" reserves depends very largely on the urgency factor: that is, the technical, financial and manpower resources devoted to the task. *For example:*

The correlation between the price of uranium and the rate of exploration is a crucial one. Prospecting of uranium was virtually halted in the early 1960s by the "thaw" in international politics followed by uncertainties in the nuclear energy programs of advanced nations. This in turn led to a rundown in stockpiles: but according to some estimates a 50-per-cent increase in price ($45 per lb. compared with the $30 quoted in our two tables) would in fact quadruple the amount of uranium available for use through intensified prospecting.

This is already happening: at one time during the year the price per lb. reached $42.

Technical and transport problems, shortages of manpower (and sparse population), distance from the consuming markets and the need for huge capital investment stand in the way of a full exploitation of vast and partly proved resources, including shale oil in the Rocky Mountains, U.S., tar sands in Alberta, Canada, and, above all, the coal, oil, natural-gas and water reserves of western Siberia, in the Soviet Union.

In fact, the Soviet Union alone is estimated to possess almost two-thirds of the world's coal (hard and soft), almost one-third of natural gas, one-eighth of crude oil and a large proportion of the so-far untapped water resources of the world. But some of these reserves are in the remote regions of Siberia where lack of infrastructure, extreme weather and soil conditions, the lack of population in the sense of both working the resources and as consumers, and the necessity of transmitting fuel by rail, road or pipeline or in the form of electricity along cables would in any case be formidable obstacles to faster exploitation.

The Soviet Union, with plenty of more accessible energy reserves, has no great urge to accelerate progress. The situation may change if the Soviet Union felt obliged to step up exploitation on political grounds in order, for example, to export to prospective or wavering allies, particularly in the Third World.

The position of the West is, of course, rather different. In spite of the fresh offshore supplies of oil and gas from the North Sea (and of increased onshore natural-gas supplies from the Netherlands) and a crop of new nuclear power stations, IEA foresees the gap betweeen domestic production and consumption of energy within the OECD group of countries steadily widening over the next 10 years (see third table, page 11).

Nuclear Dilemma

One major factor in this deteriorating self-sufficiency situation is the United States with its increasing reliance on imports, particularly of Middle East crude. Another factor, shared by all the advanced Western nations, is the perceptible slowing down in nuclear power programs.

As already indicated, the only sources capable of narrowing the energy gap in the West in the medium term are nuclear power and offshore oil and gas in the North Sea. Not long after 1985, both oil and gas p.oduction in the North Sea are expected to start tailing off and the Western world will depend increasingly on nuclear power to meet energy needs, particularly in terms of electricity generation. Marginal increases in coal output in the United States, the United Kingdom, and West Germany (including a major new soft-coal field) would only be sufficient to maintain a reduced share in total energy supply.

The question of uranium prices has already been touched on, but, of course, the escalation in the prices of alternative fuels, coal and natural gas as well as oil, in recent years has in any case altered the economics of energy, particularly of electricity generation. That is why an increasing number of power utilities are looking to nuclear energy as a future fuel source: a trend greatly encouraged by the atomic energy agencies and some energy ministries in various Western countries.

A leading exponent of the nuclear argument is the International Atomic Energy Agency, whose chief economist, R. Krymm, recently produced a paper on the economics and prospects of nuclear-power generation in the developed as well as developing world.

Dr. Krymm sees many variables in the equation for even the conventional (thermal) nuclear power stations. In terms of fuel costs, reprocessing and fabrication may be set against the value of reprocessed uranium and fissile plutonium for recycling in the reactors. So estimates on this score alone may vary between a "profit" of $150 per kg. of metal in the most favorable circumstances and a "deficit" of over $100 per kg. in the most adverse ones.

But even in case of the latter, Dr. Krymm says, the break-even prices of coal and oil (that is, the levels above which nuclear power stations would enjoy a competitive advantage)—$3.76 per 10 million kilocalories of coal and $4.56 per the same value of oil—would be exceeded in most locations under the present price structure. In the most favorable circumstances for nuclear fuel, the break-even prices for coal and oil would be $1.84 and $2.35 respectively which, Dr. Krymm calculates, would give nuclear power stations "an overwhelming economic advantage."

The Costs

	LWR	Coal	Oil
1969	267	235	200
1974	500 ± 75	425 ± 46	350 ± 25
Range of ratios between estimates	1.50-2.15	1.84-2	1.63-1.88

The ultimate cost of power stations depends of course on factors other than fuel costs and capital expenditure. Such factors include the average load factor, periods of amortization and the availability of alternative fuels. According to Dr. Krymm in particularly import-sensitive areas such as Western Europe and Japan, IAEA case studies had shown that in the case of plants of 600 megawatt and above, nuclear power stations have a decided advantage over oil-fired ones.

He also argues for such appraisals being carried out on the basis of alternative power station programs rather than of single stations, "with a corresponding spread of the rather costly nuclear entry ticket over several plants." Therefore, Dr. Krymm adds, "the reasons for the paradox of shrinking nuclear programs in spite of the cost advantages must to a large extent be sought beyond the field of economics even though the latter may account for short-term effects."

These reasons include the well-known examples of plants ordered in the late 1960s on assumptions of 6-7 per cent annual growth in consumption coming into operation in the no-growth years of 1974 and 1975 and leading to unused capacities at a time of shortages of capital and escalating fuel costs.

Developing countries faced an even greater difficulty in funding capital costs. The uncertainties of the nuclear fuel cycle were yet another reason for the slowdown in nuclear power programs. Finally, there is what Dr. Krymm calls the level of "public acceptance"—the psychological resistance to nuclear power itself, particularly to what is called the "plutonium" economy highlighted by the fast breeder reactor.

But even if one ignores the fast *breeder reactor for the moment,* could nuclear power fill the energy gap in the last decade-and-a-half of this century? The IAEA's projection for the year 2000 suggests that even under the most favorable circumstances, with nuclear power generating well over half of total electricity, it would still meet only less than one-third of the total energy needs in North America or in Western Europe. The remaining gap would therefore have to be filled by alternative fuels and methods of power generation.

Alternatives

The exhaustible but so far barely tapped oil resources of the world include tar sands and oil shale. Oil and gas can also be extracted from coal which, as indicated above, is the most abundant fossil fuel on earth.

Tar sands exist in many areas of the world but by far the largest deposits are located in the Alberta province of Canada. They are estimated to contain 300 billion barrels of recoverable oil. It requires two tons of tar sands to produce a barrel of oil, which poses the problem of waste disposal apart from the technical one of extracting the oil. Venezuela is also thought to have deposits of up to 50 billion recoverable barrels. While these deposits compare in size with the oil reserves of the Middle East, sheer accessibility rules out economical exploitation of all but perhaps one-fifth of the total.

According to Dr. M. L. Slim Shirrah, senior vice-president of the U.S. corporation Conoco (which has a stake in the Alberta sands), less than 10 per cent of the deposits can be surface-mined.

Oil shale, too, exists in large quantities, particularly in the U.S. where, Dr. Shirrah reckons, the Rockies alone contain 600 billion to 1,000 billion barrels of extractable oil. Pulverized shale is used directly to fuel power stations in the Soviet Union and also as a base material for gas. In Scotland mining was abandoned as uneconomical in the early 1960s. It is the economic rather than technical difficulties that hinder exploitation of both shale and tar sands at present, although Canada has plans to produce 10 million tons of oil a year from the Alberta sands by 1980.

The extraction of oil and gas from coal was technically solved a long time ago, with Germany liquefying coal on a large scale out of sheer necessity during the Second World War. Coal gas had been the main method of gas production until oil feedstock and more recently natural gas made it uneconomical. New methods of gasification, both underground and in a gasifier, have still not managed to bridge the price gap sufficiently.

Dr. Shirrah has calculated that oil or gas produced by any of these methods would cost $24 to $27 a barrel, which is more than twice the present price of crude oil and several times the price of gas. However, these vast deposits of tar sands, oil shale as well as coal, do ensure a strategic reserve of fossil fuels once the more accessible and direct supplies begin to dry up.

"Less accessible" sources of energy are, of course, already being tapped: typical examples are the Siberian coal oil and gas deposits, Alaskan oil, and nearer home the offshore exploration off the coasts of the Middle East, the United States, the United Kingdom, Norway and other places.

The capital costs of exploiting these sources are much greater per ton of fuel recovered than, for instance, onshore oil or gas in the U.S., Canada or the Middle East. According to one estimate, North Sea oil costs eight times as much to produce per barrel as Middle East oil; Alaska even ten times as much. Yet the capital costs of shale-based oil are estimated to be still 60 per cent more than the Alaskan oil and twice as high as North Sea oil. The cost gap between Alaskan and North Sea oil on the one hand and oil from tar sands is even larger.

The Costs

The North Sea exploration program is a typical example of cost-consciousness, considering *that a single large field such as* the Forties or Brent, with annual peak production targets of 25 million to 30 million tons of oil, cost around $1.5 billion or more *each* to develop. So far 15 oil and six gas fields (the latter mostly in the southern North Sea) are on stream or have been officially scheduled for commercial development. But while Lord Kearton, chairman of the U.K. government-sponsored BNOC, reckons that they will produce returns of more than 30 per cent on capital invested and that the commercial development of seven or eight further fields may be announced within a year, the exploration consortia involved are obviously watching closely the trend of oil prices, inflation in development costs (including capital equipment), the U.K. government's taxation and participation policies and even movements of the £ sterling before embarking irrevocably on tapping the new wells.

It is the balance of such considerations that will eventually decide the degree and speed of exploitation of the Canadian tar sands or the oil shale deposits in Utah and Colorado, unless of course political strategy dictates otherwise.

Conservation

One way of slowing down the exhaustion of the world's energy reserves is by conservation. The United States imports 45 per cent of its crude oil requirements in spite of being the world's largest oil producer. The energy consumption per head in the United States—and in Canada—is more than two-and-a-half times that of Western Europe or Japan and more than five times the world average. Some experts claim that the potential savings in energy use in the United States may be as high as 50 per cent; although it should be noted that while the United States, with less than 6 per cent of the world's population today consumes 30 per cent of the world's energy, 20 years ago this proportion was as high as 40 per cent.

Since the 1973 energy crisis consumption as we have seen dropped and some of this, according to the IEA, resulted from deliberate savings programs, expressed in relation to the size of GDP (which, as indicated, is in direct relation to energy consumed), the overall saving by countries between 1973 and 1975 was 2.7 per cent, ranging from 10.5 per cent in Belgium, 9.1 per cent in Norway, Luxembourg, Denmark, 7.5 per cent in the U.K. and 7.4 per cent in Sweden (the top savers) to an actual increase in consumption/GDP ratio of 3.4 per cent in Switzerland. The ratio was unchanged in the United States.

The reason for continued high consumption in the U.S., Canada (where the saving in those three years was just 1 per cent) is largely due to artificially low price of energy. For example gasoline cost at the end of last year 15.6 cents per liter in the U.S. and 18.6 cents in Canada compared with an average of 32.4 cents in the nine countries as a whole. Heating oil prices in both the U.S. and Canada were well below the average; natural gas per cubic meter sells in the U.S. at less than half the price of the Netherlands which, like the U.S., is self-sufficient in gas. Taxes on fuel are considerably lower in the U.S. than in the other countries.

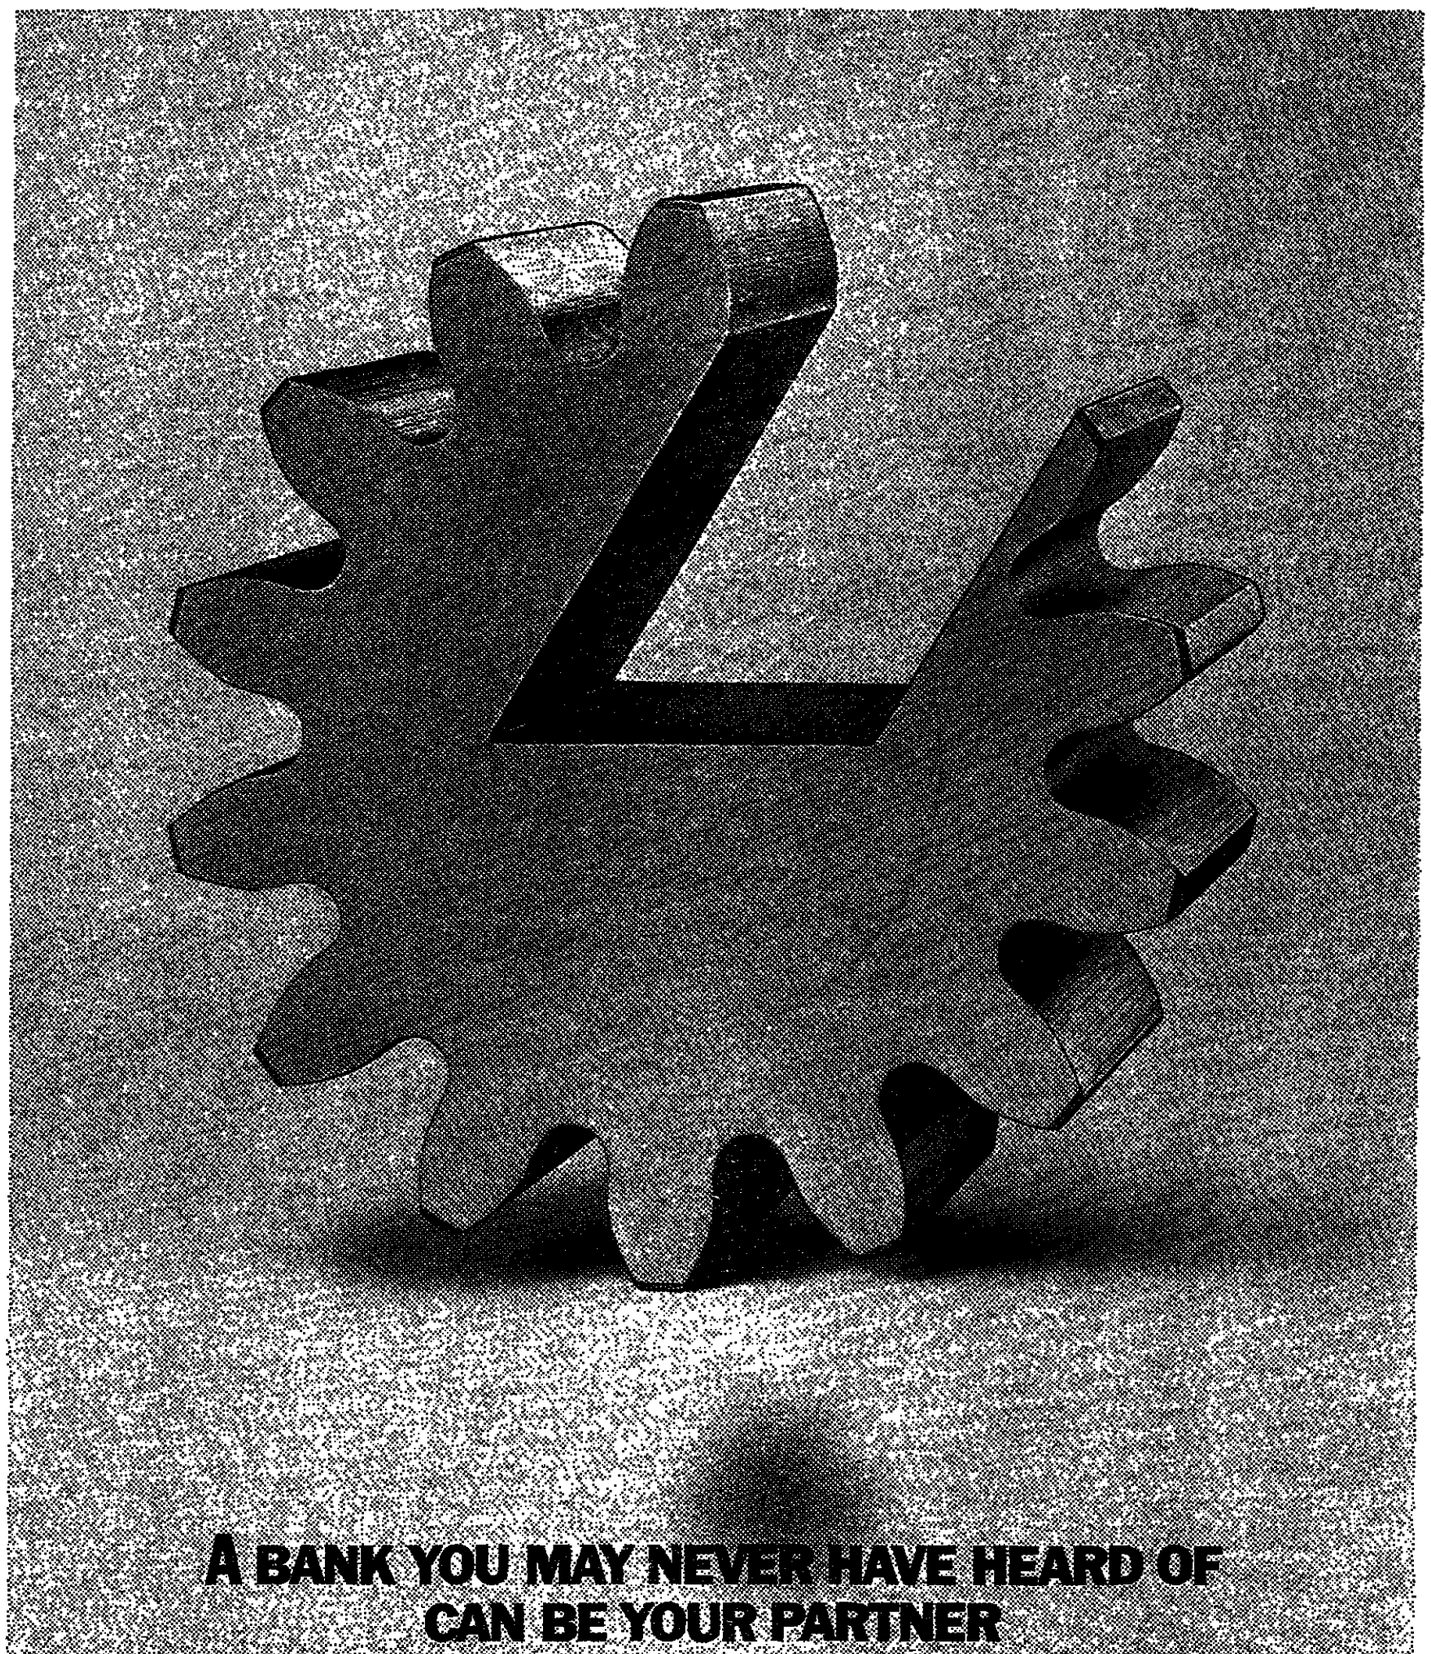
The IEA, in a recent report on conservation, notes as a "disturbing fact . . . that some IEA members continue to price energy at low world market levels," and claims that this discourages efficiency in use. "In most countries the populace is skeptical that any energy problem exists."

The IEA underlines its specific recommendations for energy savings, from transport to industry and the domestic user and of course electricity, where the average loss of heat is still around two-thirds of total capacity.

Exxon Corp., in a survey of potential energy savings, reckons that by the adoption of conservation programs savings could range from four per cent of projected energy consumption through the world in 1980 to nine per cent in 1990 and 12 per cent in the year 2000. The total amount of fuel saved could be as much as 7.3 million barrels of oil equivalent in 1980, 24.1 million barrels in 1990 and 53.6 million barrels in 2000—which in fact is only slightly less than the amount of oil the world consumed last year and about half of last year's total energy consumption.

Other Options

The fast breeder reactor (FBR), as a highly efficient user of uranium has already been touched on in this article. The first commercial versions are not likely to appear on the scene before the mid-1980s, in the United States, France and the Soviet Union, possibly followed by the United Kingdom. Everywhere the debate is hotting up over the attendant risks, not only of mechanical failure and consequent radiation hazards but also of plutonium "getting into the wrong hands." If all energy decisions are ultimately political ones, the FBR is probably no less than most. In any case, the capital costs (as opposed to the lower fuel costs) would be much larger than those of conventional nuclear stations because of the high degree of built-in safeguards and high-cost materials; for this reason alone FBRs are not likely to make a major contribution to energy needs in this century, even if environmental and other opposition were overcome.



Several other energy sources such as the sun, wind, tides, waves and the core of the earth (geothermal)—all dealt with in other articles—are already providing fringe benefits to the economy but on a very restricted scale, in very special circumstances. Much remains to be done to achieve widespread economical application. It is pointed out by the U.K. Department of Energy that it took 20 years of research and development into the peaceful uses of nuclear energy to bring it to the point of supplying one per cent of the world's total energy demand.

With such a time-scale in mind the department adds, it seems doubtful that all these sources combined could supply even 10 per cent of the world's total energy needs by the turn of the century.

Energy by nuclear fusion in the form of a controlled thermonuclear fusion reactor is still little more than a theoretical possibility well into the next century.

The Future?

For all the shocks created by the Middle East crisis, it has provided one blessing in disguise. It has forced the world, in particular the highly energy-dependent Western nations, to seek closer operation in the planning, exploitation, use, funding and conservation of energy sources. But there is a long way to go to establishing joint priorities, at least a start has been made.

A BANK YOU MAY NEVER HAVE HEARD OF CAN BE YOUR PARTNER IN FINANCING MAJOR INDUSTRIAL PROJECTS.

Not too many people know our name. DG BANK. But we are one of the biggest in West Germany. We're the central bank of a group with more than 19,500 offices. So we cover the Federal Republic like no other banking system.

Those thousands of offices with their millions of depositors put thousands of millions of marks at our disposal. We also raise long-term funds by issuing our own bearer bonds.

As a world-wide commercial bank, we have borrowers in eighty countries. In addition, we offer a wide range of investment banking services, including syndication and Eurobond trading. With international subsidiaries, affiliated banks and representative offices we're a growing force in the world's important financial centers.

There's hardly any job we can't handle. So get in touch with us if you're involved with major industrial projects.

DG BANK Deutsche Genossenschaftsbank, Taunustor 3, Postfach 2628, D-6000 Frankfurt (Main) 1, West Germany.

Politics: West's Vulnerability in Prices, Participation Clashes

(Continued from Page 11)

ified on these grounds has n interpreted by Western comments and oil companies as re than an opening gambit aining ahead. Nevertheless the widely anticipated 10-per-cent increases are con-bitterly in advance, with ter-arguments on their eco-ic soundness and justification even hints (officially repu-ed or at least unconfirmed) diplomatic action such as an s embargo to the Middle East. Commentators in the West have eady pointed out that an arms bargo would not only damage consuming nations' efforts to for oil imports with increas-exports to the Middle East, ica and Latin America and w down the process of "re-ling" the oil revenues, but o the strategic aim of main-ning a friendly "buffer" in Middle East and Africa to fset expansion.

Justification

s for OPEC's claim to in-ase prices merely to keep with inflation, the U.S. ional Research Foundation ced figures recently to show commercial import price in-es to OPEC countries aver-only 2.7 per cent in the year. Admittedly these res did not include military ipment and installations ere overcharging by some sup-ers is believed to have occur-d, but, taking these into ac-nt, Western commentators ieve it unlikely that OPEC tories would require even a per-cent rise in oil prices to mpensate for inflationary in-ases in their import costs. Moreover, imports from coun-es like the United Kingdom, ly and, to a lesser extent, nce, paid in the devaluing rencies of those countries hile oil exports to them are d in U.S. dollars) have ob-ously lessened the impact of flationary cost increases. On their part, OPEC countries im that notwithstanding the tly increased oil revenues, ir overall balance of payments s deteriorated sharply since ose spectacular improvements 1974.

Estimates from both U.S. and ECD sources appear to support s claim. One such estimate by the Morgan Guaranty Trust Company of New York published in September puts the combined current account balances thus (in billions of dollars):

	1974	1977*
Oil revenue	102	128
Other commodity exports	7	9
Service exports**	4	6
Commod. imports, f.o.b.	38	82
Services imports***	15	36
Investment income receipts	4	9
Current account	65	35

* revenues assume oil price increases of "at least 10 per cent."
** excluding investment income receipts.
*** excluding investment income payments on direct investment.

The decline in the OPEC balance of payments is in the main caused by the vastly increased volume of imports, not by inflationary price increases, according to the Morgan Guaranty Trust review.

Morgan Guaranty adds that a 10-per-cent-plus price increase would be "very disturbing" not only because it would threaten business recovery and weaken confidence in the West but because it would appear to be unjustified by recent price movements. The price of oil in terms of manufactures has risen by 6 per cent between 1974 and the first half of 1976, says the review: a 10-per-cent increase in the average OPEC government take next year "would imply even further appreciation in the relative price of oil."

The pressure for larger oil price increases comes from countries within OPEC which have already seen their balance of payments surpluses melt away or are on the verge of a balance of payments deficit. The former include large countries with relatively small export volumes such as Indonesia and Algeria but with ambitious programs of industrialization; the latter, countries with larger exports but limited reserves and similarly ambitious economic plans such as Iran and Nigeria.

Other big exporters such as Saudi Arabia, which contains almost one-fifth of the world's total known oil reserves and which is therefore in no hurry to accumulate funds (Morgan Guaranty reckons that of OPEC's total foreign assets of $120 billion — which may rise to $163 billion next year—Saudi Arabia may account for slightly over half), would prefer a more moderate price increase: hence the sustained wooing by Western governments and companies in recent months.

Sufferers

To critics complaining about the difficulty of recycling oil revenues, OPEC counters with its own difficulties of long-term investment. Although Morgan Guaranty claims that the proportion of OPEC surpluses invested in short-term assets declined from 65 per cent in 1974 to only 24 per cent in the first half of 1976, OPEC suspects there still is resistance in the West to Arab money and particularly to Arab participation in its disposal —i.e. in the management of companies in which they invest. Major industrial investment such as Iran's stake in the West German engineering and steel concern Krupp or Kuwait's in the motor vehicle company Daimler-Benz are still the exception rather than the rule.

In any case, OPEC says, the main sufferers of oil price increases and the recycling of revenues are not so much the advanced economies of the West as the non-oil producing developing countries. This is confirmed by a recent OECD estimate of current balances.

Chief Feyide recognises that the non-oil-producing developing countries have the worst problems, unable to pay for increased oil prices by proportionately stepping up their exports. On the other hand, he claims that OPEC countries "are playing a leading role in helping to resolve these problems," through the IMF, the World Bank and direct aid.

Control

The OPEC countries do not conceal their objective of consolidating what they describe as the "New Economic Order" while oil production—and demand—are still at their peak and reserves show no serious depletion. That is why Western efforts at conservation and the opening up of new sources of energy have not met OPEC resistance—always provided that economic activity is maintained and demand for oil does not flag disastrously.

This New Economic Order goes, as far as OPEC is concerned, beyond revenue increases, accumulation of foreign assets and a steady market for oil. It aims at an increasing control of crude oil resources, their disposal and processing, particularly as oil—and gas—comprise around 90 per cent overall of the natural resources of OPEC countries.

The OPEC countries do not conceal their objective of consolidating what they describe as the "New Economic Order" while oil production—and demand—are still at their peak and reserves show no serious depletion. That is why Western efforts at conservation and the opening up of new sources of energy have not met OPEC resistance—always provided that economic activity is maintained and demand for oil does not flag disastrously.

The process of OPEC—and other—oil producing countries acquiring first a stake in and later control of energy resources onshore and offshore began long before OPEC was formed in 1960, with the attempt by the Iranian government to nationalize the Abadan oilfields and refinery. The attempt was frustrated by an international boycott of Iranian oil which was only lifted when a British Petroleum-led consortium took over the assets formerly owned solely by BP. In December 1972, almost a year before the Middle East war, several major oil producers, including Saudi Arabia and Kuwait, signed participation agreements with the oil companies for the progressive acquisition of majority stakes in operating companies on their home soil, thus following a recent lead by Libya.

This was accompanied by a revision of the terms of the oil "take" through royalties, taxes and concessions in favor of the producing governments. After the Middle East war the period of stage-by-stage acquisition of majority control was shortened.

In fact (according to Mr. E.R. Cattarulla, of the Exxon Corp.) the Gulf countries already have an effective 60-per-cent participation in the crude oil operations within their borders while Venezuela, Kuwait and Iraq have full control of their oil resources. In addition, the royalty and taxation rates in OPEC countries had increased from 12 1/2 per cent and 55 per cent respectively in mid-1971 to 20 per cent and 85 per cent in mid-1976.

However, as Mr. Cattarulla remarks, "the appeal of complete takeover is not universal in OPEC circles."

Libya, he says, "stuck with 51 per cent participation even when the others went 60/40." Abu Dhabi "is another country which has publicly proclaimed that it wishes to retain the oil companies as investors." And while, Mr. Cattarulla adds, these two countries are in the minority, the other major OPEC members (including Saudi Arabia) "seem to feel that the dependence of the consuming countries on (their) oil will be sufficient to retain the commitment of the (international) companies to providing their needs."

Changing Role

So, in spite of the status quo continuing in some countries such as Libya, Abu Dhabi and Nigeria, "in a majority of OPEC countries we appear to be moving towards a change in the role of the oil companies from that of investor to buyer of crude oil and provider of services." Some of the governments have teamed up with oil companies in downstream (refineries, petrochemical plants, etc.) as well as transport operations, including tankers, gas and chemical carriers and pipelines.

In its turn, OPEC argues that the changing role of the oil companies, the increase in the royalties and taxes they have to pay have not diminished their return on capital and sales. (This appears to be borne out also by their latest profit-and-loss accounts.)

Figures produced by the OPEC secretariat earlier this year purport to show that of the total cost of oil to the consumer, it is the taxes in the consuming countries that still claim the lion's share, well ahead of the share of the producing governments' take and the profits of the oil companies.

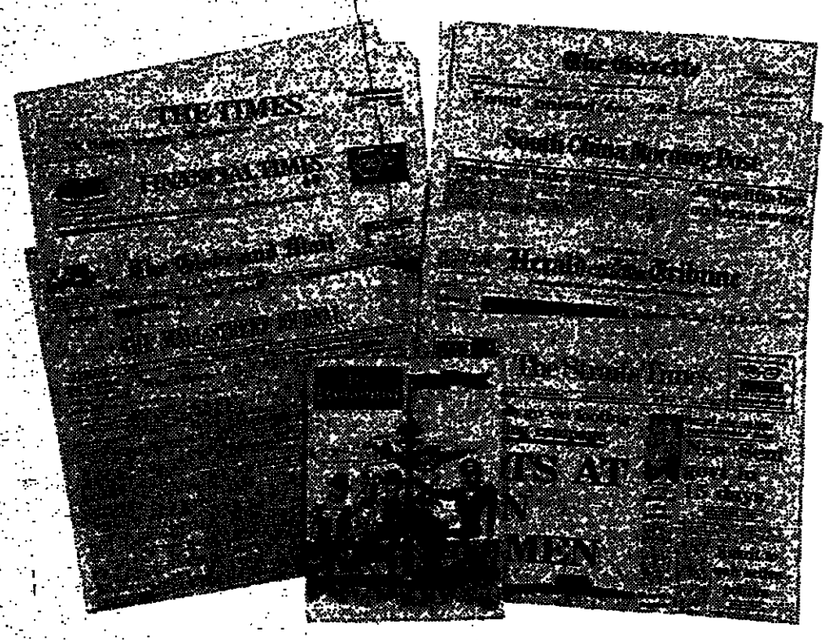
Figures reveal that during the three-year period when the total cost of oil rose from $20.46 per barrel to $33.1" per barrel (the actual rise in the price of oil took up by far the largest part of the total increase while refining costs remained stable and freight charges and other costs were actually declining), the trebling of producer government take did not prevent the oil companies from maintaining their share and taxes from continuing to claim a large proportion of total costs.

OPEC countries still provide 90 per cent of the world's oil imports: but in the purely European context the new resources discovered in the North Sea, mostly off the shores of the United Kingdom and Norway, will go some though by no means all the way to reducing the Continent's dependence on imported energy. (This too, is analyzed in some detail in other articles in the survey).

The Norwegian government, through its instrument Statoil, has from the start insisted on a 50-per-cent optional equity stake in oil and gas discoveries in its sector. In United Kingdom offshore, however, a similar development through the British National Oil Corp. only took place last year after a change in government. BNOC has 51 per cent purchasing options in only a few oilfields while some of the major oil companies, including Exxon, Shell and Mobil, have up to now refused to accept such a constraint on their processing and marketing activities.

Tony Benn, the U.K., energy secretary, seems optimistic that these companies would follow the example of Gulf, Conoco, Burmah and BP (provisional) which have signed purchasing option agreements with BNOC, particularly as equity participation is a condition of awarding exploration licenses, in the fifth round for which applications were made in October. Lord Kearton, chairman and chief executive of BNOC, claims that the state company already has direct control of about 25 per cent of North Sea production in the 1980s (when it will be at its peak) and some say in at least that proportion of the total output.

On their part, the major oil companies seem to dislike the British move even more than they did in the Middle East. They object to it partly on the grounds that the original terms of exploration had been changed unilaterally, partly (as one U.S. executive put it) for "behavior we did not expect from a member of the Western alliance" but more obviously because of such further restriction on their operational freedom.



However in the United States the entire future corporate strategy of the U.S. oil companies is at risk. Congressional attempts at "divestiture" would oblige the companies to shed their growing coal, nuclear, transport and other non-oil-producing interests. They are, of course, resisting not only because of the immediate threat to corporate strategy and profitability but because this strategy tries to anticipate long-term changes in energy patterns, including the decline in the world's oil and gas reserves and the consequent shift towards nuclear energy and other alternatives to fossil fuel.

So, in the wake of the more immediate instability threatening energy supplies (such as the prospect of another flare-up in the Middle East) looms the longer-term one associated with the worldwide expansion of nuclear energy, the advent of the "plutonium economy" and its inherent political risks. The deals involving the building of nuclear power stations in Brazil by Kraftwerk Union of Germany and a nuclear processing plant in Pakistan by a French contractor—neither country has signed the nuclear non-proliferation treaty—have aroused fears of such enlargement of the "nuclear club."

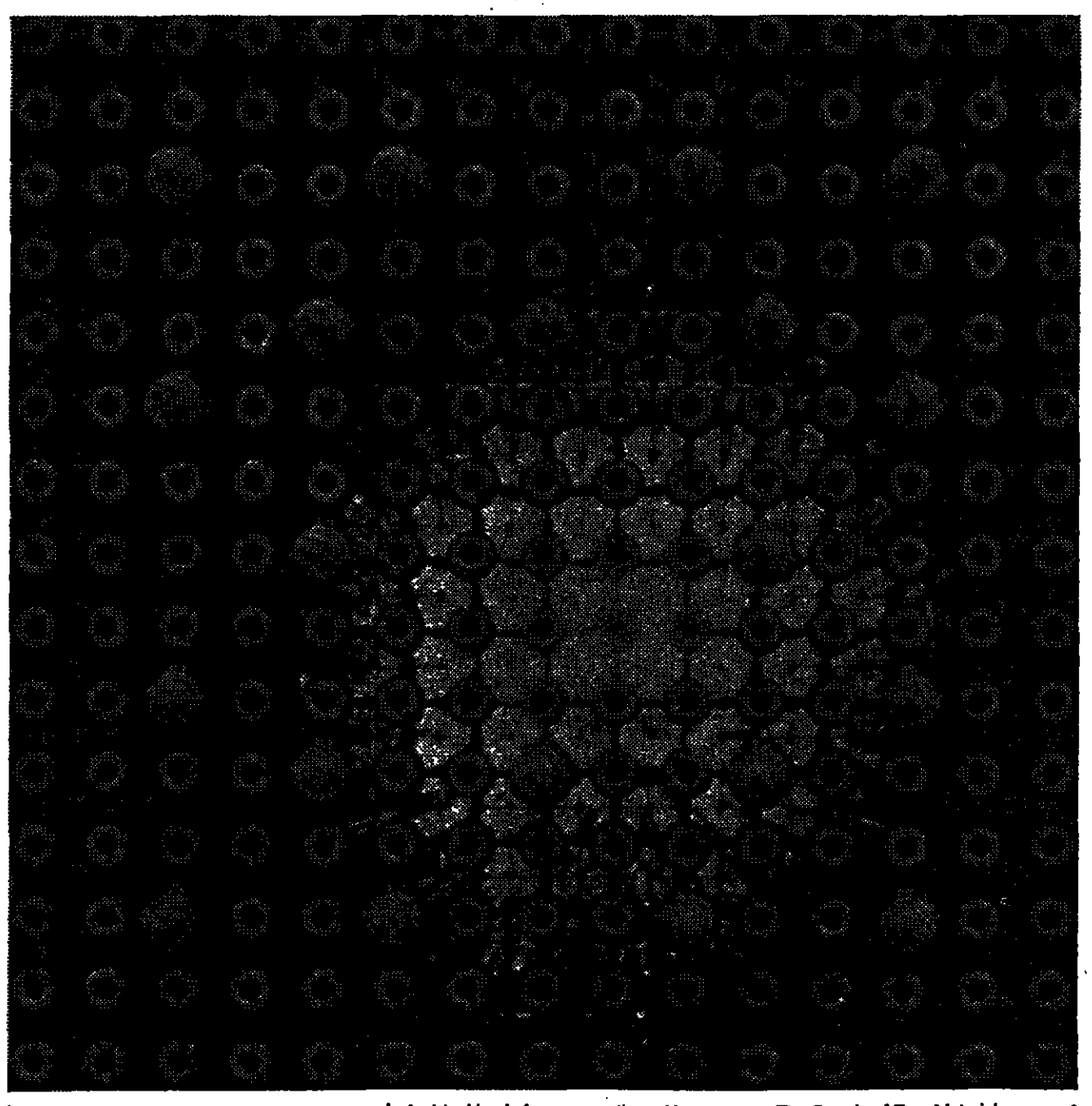
Yet another risk, highlighted by the International Energy Agency, is the increasing dependence of the advanced Western countries on imported energy. With the fast-declining reserves of the United States and the temporary stop-gap provided by the North Sea, the enormous and largely untapped coal, oil and gas deposits of the Soviet Union constitute a political as well as economic challenge the West cannot afford to ignore.

It is a challenge whose significance is enhanced by the growing gap in living standards between the advanced industrial nations and the energy-starved developing countries of Africa, Asia and the Far East. The Soviet Union may in the long term be in a better position to help bridge that gap than an increasingly import-dependent West.

For energy is a significant factor in shaping world politics of both the present and the future.

The Bank that covers the World

Banque Nationale de Paris has an international network extending over sixty countries in the five continents of the world.



Wherever you do business we are there to help and advise you.

Raw Materials
Energy
Environment

Three technical terms turned into everyday words.
Metallgesellschaft has always been in the forefront of know-how development.
A century of experience in prospecting, exploration and marketing of metals; research and metallurgy; manufacture of high-quality semi-finished products; development, planning and design of industrial plants incorporating the latest state of technology; development of new engineering and chemical processes; group-integrated transport, banking and insurance services.

An ideal basis for cooperation with our partners in nucleonics.
Pioneering achievements in metallurgy and the creation of new materials for use in nucleonics are major contributions made by our metallurgical laboratories. Top-grade reactor cladding tubes and semi-finished products made of zirconium alloys for use in reactor fuel elements and other components of the reactor core are the specialty of VDM Zirkonium-Gesellschaft, tubes made of special steels and alloys that of our Tubes Division, a part of VDM. The LURGI-Gesellschaften develop and design industrial plants for nuclear processes and environmental protection. ANTITRON and VZW play a decisive role in radiation protection. URANGESELLSCHAFT, engaged in exploration and mining of uranium deposits worldwide, and a major supplier of natural uranium, is one-third owned by the group.

Continuing Controversy Over Nuclear Power Programs

PARIS (IHT).—No energy source seemed more likely to benefit from the oil crisis than nuclear power. Ever since the United States exploded its atom bomb over Hiroshima thirty years ago, scientists have been trying to harness the atom's enormous potential for peaceful uses. Already in the 1950s nuclear power was seen as the natural heir to conventional fuels such as coal, oil and gas. A decade later the technology was ready, the manufacturing capacity prepared and the first orders were being placed by the utilities. But so long as consumer countries could count on freely available crude oil at rock bottom prices, there seemed little urgency in pushing ahead with the nuclear option.

The oil crisis provided that sense of urgency. The Middle East embargo made consumer countries realise how strategically dependent they had become on a few Middle East states. If something dramatic was not achieved, the policies of the United States, Western Europe and Japan would be decided not in Western capitals but in Tehran and Riyadh. With only limited indigenous oil and gas resources to fall back on, the only way the consumer countries could reduce their dependence on the Middle East would be through a return to coal or an advance into nuclear energy. For Europe and Japan, which have limited and poor coal resources, it was only through nuclear power that greater energy independence would be secured, but even for the United States coal alone would not be sufficient.

Already before 1973 utility companies had been attracted to using nuclear energy instead of coal, oil or gas for generating their electricity requirements. Not only was this new energy source cleaner than conventional fuels and uranium supplies easily available, but there was already a slight price advantage. But with the Middle East embargo and the quintupling of oil prices, the arguments for switching to nuclear power became very strong.

With nuclear power, utilities could obtain electricity 50 per cent cheaper than with oil or with less risk of a cut in supplies or an increase in production costs. Uranium represents only a small element in the cost of generating electricity and it can be found in a large number of countries, notably the United States, Canada, South Africa and Australia, which can be considered stable supply sources. If coal prices did not increase quite as fast as oil or gas, the inconvenience of this fuel and the environmental problems associated with it remained.

As a result of these strategic and cost considerations, one country after another announced dramatic extensions to their nuclear power plant construction programs. Japan and France, which are particularly dependent on energy imports, decided that nuclear-generated electricity should account for as much as 25 per cent of their 1985 energy requirements, West Germany 16 per cent, and the United States and Italy 13 per cent each. Within the coming decade consumer countries were planning to install four times as many nuclear power plants as they had done in the ten years before.

The importance of the nuclear commitment was recognized by the Organisation for Economic Cooperation and Development (OECD) in its "Energy Prospects to 1985" report issued at the beginning of 1975. Basing their forecasts on what member governments had told them, the OECD economists reckoned that nuclear power would supply 756 million tons of oil equivalent in 1985 compared to some 35 million in 1973 if oil prices remained at their present levels. Representing some 600 gigawatts of nuclear power, this would have amounted to some 14 per cent of the area's total energy requirements.

Future in Question

Yet within two years of those forecasts, the whole future of nuclear energy is being called into question. Some European countries like Denmark, Holland and Belgium have halted their nuclear expansion plans altogether, others like Sweden and Britain are moving in the same direction and the future policy of the United States is now uncertain after the presidential victory of Jimmy Carter. Even in those countries which were most committed to the nuclear option, such as France, Japan and West Germany, orders are coming through less fast than expected. According to the latest estimates made by the OECD, 1985 nuclear capacity may be little more than half what was originally forecast at only 419 million tons of oil equivalent, or 330 gigawatts.

It is often assumed that this slowdown in nuclear power programs is the result of environmentalist pressures. It is true that plant constructions have sometimes been held up by the difficulty of securing site authorizations and that governments have been influenced by popular hostility to nuclear power, but, so far, at least the main cause for the delays has been the slowdown in demand growth for electricity and the financial difficulties of utilities, whether private or state-owned.

When governments announced their nuclear expansion programs two years ago, they assumed that if energy demand as a whole were to grow less fast than in the past, the role of electricity would increase at the expense of primary fuels such as oil and gas. This increase in the importance of electricity from about 10 per cent to 14 per cent of total energy consumption was considered a natural development in the pattern of OECD energy demand, but it also helped reduce the area's import dependence.

But the governments had not taken into account the effect on demand of the sharp price increases of electricity and a severe economic recession. Instead of having to cope with an annual demand increase of some five per cent a year or more, utility companies found consumption actually fell for the first time since the war.

With their power plants working well under capacity, utilities were hardly in a position to undertake costly investments, especially when future demand remained so unclear. To make matters worse, the initial capital costs of nuclear plants rose 50 per cent within two years, the price of uranium went up fivefold and operating costs were raised by tougher environmental and security regulations. What had once been 50 per cent cheaper now had an edge of only about 30 per cent.

Delays

Rather than commit themselves to build plants which might never be needed, the electricity producers preferred to wait until a clearer picture of the energy situation had emerged. They still considered nuclear power cheaper than oil, gas or coal, but they knew that if they got their sums wrong they could always rush out an oil-fired plant in four or five years compared to the eight required for nuclear plants.

But if the delays in the nuclear power program have so far been essentially due to demand factors, there is a real danger that environmental considerations may now prove the main obstacle to nuclear development. So long as environmental groups concentrated their campaigns on the dangers of radioactive particles emitted from the plants or on the danger of leaks from the reactor cores, governments found it relatively easy to show that nuclear power was less polluting or even dangerous than conventional power units. Indeed, many scientists would claim that if a thorough examination of the question were made, the coal cycle from mining to combustion involves more risk to life and the environment than the same elements of the nuclear cycle.

But with public concern now being aroused over the dangers of nuclear proliferation, the use of plutonium by terrorists and the problems of radioactive waste, some governments are wondering whether the game is worth the candle.

The problem is that conventional nuclear plants are in themselves no long-term solution to the energy problem as sooner or later they will run up against the same raw materials problems as oil-fired plants. Higher uranium prices should result in the discovery of important new uranium reserves, but the present known resources of the metal are expected to run out at about the same time as the world's oil and gas reserves are depleted.

So although existing reactors—be they heavy or light-water models—have enviable safety records, they are but a stop-gap measure until fast-breeder reactors have become commercial. For it is only with the fast-breeder, which consumes hardly any uranium and regenerates its own fuel, that cheap and plentiful nuclear energy will become available. But it is the fast-breeders which are now coming up against the most determined opposition from environmentalists.

A conventional light-water reactor operating on enriched uranium does not in itself constitute a major health or security hazard. Whereas an atomic bomb contains 95 per cent enriched uranium and is specially designed to explode and spread radioactivity, a nuclear plant operates on only 3 to 4 per cent of uranium enrichment and is built to contain the fission process.

The real danger lies with the waste materials, which contain highly radioactive materials, including plutonium used to make atomic bombs. By reprocessing this waste, utilities are still left with radioactive products which have to be stored underground in salt mines, granite or other substances, but they recuperate valuable enriched uranium and plutonium which they can reinject into their reactors.

This recuperation is important as conventional reactors will otherwise soon run out of nuclear fuel. If they do not use plutonium, they must rely on enriched uranium 235, which represents only 0.7 per cent of natural uranium. The snag is that reprocessing is the only way in which plutonium is made available for military purposes as well.

In the case of conventional nuclear plants the dangers of nuclear proliferation could be reduced by just not reprocessing the waste fuel and restricting the facilities for enriching uranium (when enriched to 95 per cent instead of the 4 per cent needed for reactors, uranium 235 can be used for bombs). That would still leave the rather hair-raising prospect of future generations living on the top of vast radioactive waste deposits, but the chances of nuclear proliferation would at least be reduced.

However, in the case of fast breeders, some reprocessing facilities are essential if the reactors are to be supplied with the plutonium fuel they need. And breeders offer the tremendous advantage of being able to convert uranium 238 representing 97.3 per cent of natural uranium into plutonium fuel, thereby facing none of the fuel problems associated with conventional plants. But they could increase the dangers of nuclear proliferation, especially if reprocessing facilities got into the wrong hands.

With no really satisfactory solution yet found to the problem of nuclear waste and the growing threat of nuclear proliferation, governments are naturally wondering whether it is worth risking a world catastrophe just to reduce their dependence on a few Middle East states. Would it not be wiser to concentrate on coal, oil and gas until alternative and less dangerous energy sources can be developed?

There is certainly a temptation for politicians to slow down their nuclear programs in the hope that these problems will disappear. But disappear they will not. Even if nuclear programs were stopped now, the world would still face problems from radioactive waste and nuclear proliferation. In the short term, oil is the only real substitute for nuclear power, but there is no guarantee that it will be available, at least at an acceptable price. From a scientific point of view it would be unwise to abandon a technology just when it is about to bear fruit. Industrially, such a move would appear unrealistic now that so many interests are involved. Nuclear development will continue, but special attention will have to be given to the problems of proliferation problems. For it is only when satisfactory answers to these questions have been found will the haunting association with Hiroshima be forgotten.

—M.P.

Bavaria has always been a fine place for meeting the right people.

Bavarians enjoy life more than most Germans. They're proud of their culture. They enjoy beautiful things. And they like people. They also have a talent for and vast experiences of, international banking. And for helping other people prosper.

Bayerische Landesbank can help you, too. Based in Munich, hub of one of the most prosperous and fastest-growing regions of Western Europe, we're among Germany's largest "universal" banks – with a balance sheet total of over DM 45 billion.

We're bankers to the State of Bavaria, and authorized to issue our own bearer bonds. We're also an integral part of Germany's most powerful financial organization, the savings banks network. As such we have truly substantial, well-balanced resources.

Bayerische Landesbank has the management capacity to put together a world-wide syndicate of underwriters and selling groups.

Our experience ranges from management of major domestic issues to participations in leading international underwriting syndicates in either foreign DM issues or other Eurocurrencies.

And we know our market intimately, from the ground up. This knowledge-in-depth, coupled with our immediate access to good sources means we can price issues sensitively and promptly. And independently.

Through our international presence in major financial centres we can meet any client's requirements – from a roll-over credit, via a sophisticated loan syndication, to an easy private placement.

We're also well-placed to give you sound advice about introducing a foreign concern on any German stock exchange. A successful venture, no matter how big, depends upon knowing exactly the right people to borrow from. Bayerische Landesbank is right for most people.

Sound banking. Solid growth. Plus two very special ingredients – "Bavarian friendliness and drive". That's what makes Bayerische Landesbank the perfect partner for all your international banking needs.

BREDA TERMOMECCANICA

BREDA TERMOMECCANICA S.p.A. is the first Foreign Component Manufacturer to be awarded the ASME Nuclear "N" and "NPT" Stamps.

BREDA TERMOMECCANICA S.p.A. has achieved a series of outstanding successes in the design and manufacturing of nuclear components.

This achievement was accomplished by means of Breda Termomeccanica up-to-dating workshop equipment and to the high level standard of its technologies.

Production Program:
Reactor Pressure Vessel for PWR and BWR
Steam Generators
Pressurizers
Main coolant piping
Components for fast breeder reactor
Components for heavy water reactor

Coal, Long Scorned, May See a Comeback

In the first panic of the oil crisis it was only natural that people should forget their old prejudices against coal, but it soon became obvious that its comeback was going to be less easy than was first thought. In Western Europe and Japan most of the coal mines remained uneconomical, even after the quintupling of the oil price. Where coal could be mined cheaply—as in the United States—problems of transport and environment still remained.

RIS (IHT).—They had writ-ten it off. Mining companies not attract young people work underground, utilities nding it increasingly un-ctive and inconvenient as rce of electricity, environ-ists objected to the land-e damage caused by its ex-tion, to the sulphur dioxide ted when it was burned and the coal waste left behind. by one its customers were ally abandoning it—ships and ways long ago, private house-s in recent years, industrial panies and now the utilities mselves. The coal era, charac-ed in Europe by the grimy of the miner, landscapes dis-red by coal mountains and ing mineworks, industrial ns blackened by the smoke chimney stacks, was finally ing away to be replaced ally by oil and gas, eventually nuclear power.

his phasing out of coal was true of Western Europe and an than of the United States. ween 1960 and 1973 West Eu-an coal output fell from 334 lion tons of oil equivalent to million, while that of Japan ped to 16 million from 42 mil-. The only countries with ificant reserves, Britain and Germany, had sharply re-their production, while of the other countries were ing down their mines alto-er. But even in the United es, where production had in-ased from 351 to 350 million s of oil equivalent, utilities e turning increasingly to other ergy sources. Between 1960 and the consumption of coal in OECD area remained vir-ally unchanged at around 600 lion tons of oil equivalent le total energy demand rose m 1,858 million tons to 3,468 lion. In this period demand oil nearly tripled and that for doubled.

A Revival

he year 1973 was to nge all that. When the Arabs ped down on their oil exports quintupled their prices, con-ier countries suddenly redis-ered the virtues of that most lamorous of energy sources ch had been responsible for t of their industrial develop-nt during the past century. It true that coal was not such a convenient fuel as oil. It was bulkier to transport, dirtier to use and for the moment, apart from its applications in the iron and steel industry, it could only be used economically to generate electricity.

Whereas oil and gas would only be capable of satisfying the world's energy needs for some 40 years or so, here was an energy source with a lifespan five to 10 times as long. Reserves estimated to be as much as 700 billion metric tons were widely scattered throughout the world with some 60 per cent inside the OECD area. Already competitive before the oil crisis as a source for generating electricity, coal from the United States, Australia and South Africa should now be a complete bargain. And once the costs of gasifying or liquefying coal had been brought down, coal could even replace oil and gas as a direct energy source in transport and heating.

In the first panic of the oil crisis it was only natural that people should forget their old prejudices against coal, but it soon became obvious that its comeback was going to be less easy than was first thought. In Western Europe and Japan most of the coal mines remained uneconomical, even after the quintupling of the oil price. Where coal could be mined cheaply—as in the United States—problems of transport nd environment still remained. With electricity demand increasing less sharply than anticipated, utilities were in no hurry to move back to coal, especially as in the absence of any established world coal trade they could not be sure of future supplies or prices. Rather than switch back to coal with its costlier power plants, pollution problems and land requirements, utilities preferred to push ahead with nuclear, leaving oil as a fall-back position.

So although the United States is sitting on coal resources which are almost as valuable as the oil reserves of Saudi Arabia, there was never any real chance that coal could immediately replace costly oil and gas imports. The most efficient mines could produce coal four or five times cheaper than oil, but once land transport was involved the difference narrowed sharply, and the most economic sources of coal were the open mines in the West of the United States where exploitation raises environmental issues over how the land should be reclaimed afterwards.

It was because of these difficulties and the long-lead time involved in opening up few mines that OECD forecasters never expected any immediate miracles from coal. In the 1975 study "Energy Prospects to 1985" U.S. production was expected to rise from 365 million tons of oil equivalent to 660 million, with exports increasing from 38 to 91 million, but West European production was expected to increase only marginally and that of Japan to fall slightly, although consumption in these latter areas would grow because of imports.

But even these modest consumption increases, which would have seen coal's share in U.S. energy requirements rise from 17.7 to 22.5 per cent and fall from 22.2 to 14.8 in those of Western Europe, are now unlikely to be realized because U.S. coal production is going to fall far short of original forecasts. With hardly any increase in electricity demand and a decline in steel industry requirements, there has been little incentive to open up new mines, even if the environmental problems can be overcome. In many areas transport problems still make coal uneconomical, but even where it is cheaper than oil and gas, utilities still prefer nuclear power which is cleaner, more convenient and in many cases cheaper. And if there is a problem over obtaining authorization for nuclear plants, the problems with coal-fired stations are not much easier.

A Comeback

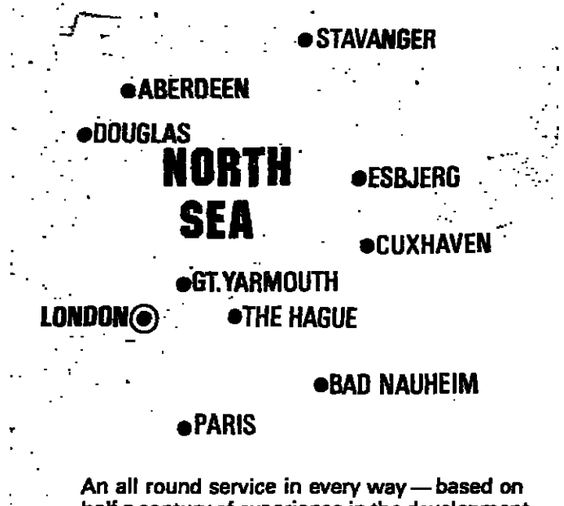
All this would not matter so much if nuclear power was really playing the role everyone had expected. But because of the flattening out of electricity demand growth during 1974 and 1975, the rise in nuclear costs and the uncertainties hanging over nuclear energy as a whole, nuclear capacities are now expected to be little more than half that originally planned. With both coal and nuclear not coming up to expectations and little more scope left for hydro, utilities may well have to fall back on oil and gas for their power stations. With nuclear plants taking some eight or more years to build compared to little more than four years for an oil-fired plant, the longer the utilities delay the more likely it will be that oil will continue to play an important role in electricity generation in ten years' time.

According to revised forecasts made by the International Energy Agency, oil will account for 45 per cent of the additional fossil fuel consumption needed for electricity generation in 1985, bringing its total share to 35 per cent from 30 per cent in 1974. The additional oil will account for a third of the additional oil imports required by 1985. But this does not take into account a more pessimistic assessment of 1985 nuclear capacity which could almost double the growth in oil requirements.

With growing signs that consumer countries will be much more dependent on oil and gas in 1985 than they had originally hoped, the prospect of a sharp increase in demand for oil from utilities is extremely disturbing. It is because of the threat of between 2.8 and 4.5 million more barrels a day of oil and gas being needed for IEA power stations by 1985 that the agency has just launched a crash program designed to cut back this increase by some three billion and the key to that program is increased use of coal.

Instead of setting coal imports into Western Europe and Japan at 60 million tons in 1985, the agency now believes the figure could be as high as 160 million. This objective could be reached if utilities agreed not to build any more purely oil-fired power stations (if coal units are not acceptable, they should at least be dual-purpose). But if Western Europe and Japan are to import more coal, measures will also be needed to develop a stable coal trade in which customers are not going to be subject to sudden price fluctuations. This presupposes long-term supply contracts, participations by utilities in coal mines, joint venture participations in coal transport and the preparation of ports to export and import the coal. It also presupposes greater exchanges of information on coal-trading problems as a whole.

Alternative



But if coal is really to become a serious alternative to oil and gas, or even nuclear, some way must be found to meet environmental objections to strip-mining, a sufficiently cheap technique developed to remove sulphur from coal—through stack gas scrubbing or fluidized bed combustion—and greater research carried out on gasification or liquefaction of coal. For the moment synthetic oil and gas produced from coal cost at least twice as much as the products they are trying to replace, but when used directly for heating, they are not much more expensive than electricity. South Africa is already building its second coal liquefaction unit and in Europe and the United States research is being carried out into the possibility of producing coal gas within the mines themselves.

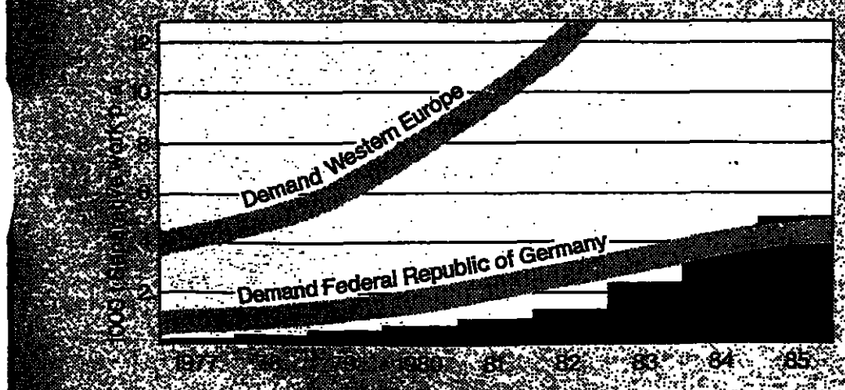
So long as coal's main energy role is limited to electricity, it can be no real answer to the world's future energy requirements. It is true that electricity may eventually account for as much as 50 per cent of energy consumed compared to only 10 to 20 per cent today, but coal will probably be only one of several energy sources used for steam generation. If its main rivals today are oil, gas and conventional nuclear power, tomorrow it could be fast-breeders, solar, geothermal and other new energies. But if coal is really to take over the position currently held by oil and gas, liquefaction and gasification will be essential. Only then will coal become an energy source which can be universally applied, cheaply transported and pollution free. Oil and gas would no longer be needed and even the nuclear commitment could then be reconsidered.

—M.P.

GRay TOOL COMPANY

serves the european energy market

An all round service in every way — based on half a century of experience in the development and manufacture of Oilfield Wellhead Control Systems.



From our complete Scottish manufacturing plant at Douglas — backed by Sales and Service bases in England, Scotland, Denmark, France, Holland, Germany and Norway — we are 'right in position' to supply and maintain our wide range of equipment.

For detailed information on our Wellheads, Christmas Trees, Mudline Hanger Systems, GateValves, Chokes and GrayLoc Pipeline Connections contact us at:

Gray Tool Co (Europe) Limited

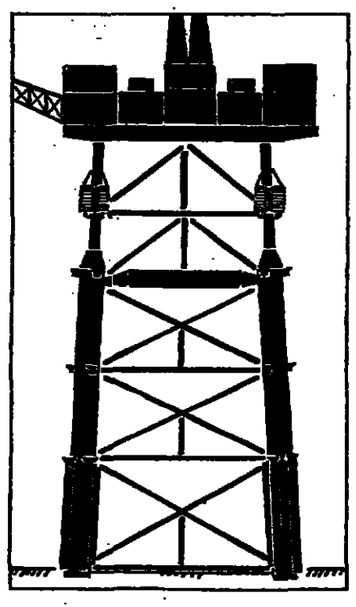
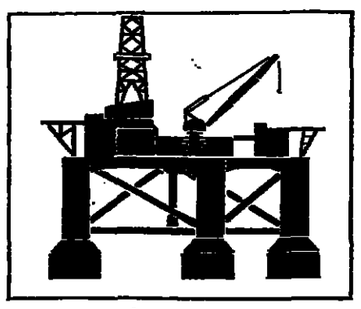
Plant: Douglas, Lanark, Scotland Telephone: Douglas (Lanark) 421

Centrifuge technology for Uranium Enrichment. A new industry is beeing set up in Europe.

Contracted orders exceeding 4 billion DM ask for investment.





A typical plant, supplying 8 nuclear power stations with ched uranium as fuel, needs vestment on the order of lion DM.
Centrifuge technology has been eloped to an industrial scale operation of ch Dutch and man partners. Deliveries of ched uranium started in 1975.
1977/78 a capacity of 400 t Separative Work per annum goes on stream. Fife years later, 20 power stations will be served with fuel from Urenco plants.
Enrichment Services are marketed by Urenco Ltd., headquarters in the United Kingdom, at Marlow, Bucks.

Gas Has Big Potential, But Transport Is Costly

LONDON (IHT).—It is only since World War II that natural gas has come to be used as a fuel on any real scale. Even by the 1973 energy crisis, in Japan for instance, gas use was minute. But by then gas had already become very important in the United States, where it had come to provide almost one-third of total energy supplies. In Western Europe the ratio was much smaller —around 10 per cent—but was growing fast, and giving rise to hopes of a large place for gas in Europe's future energy supplies.

In the United States gas came up with the oil in the big new fields in Texas and neighboring states. After a while, instead of being flared, it began to be gathered for use as a fuel in the surrounding area. But it was only after the war that compressors, pipeline materials and other aspects of the technology of long-distance gas transmission had progressed to the stage where the gas could be piped to the distant Northern states in large volume. Meanwhile gas from the Albertan fields in Canada found a market across the border in the American Midwest.

In Europe the age of natural gas was inaugurated after the war when Agip, with Enrico Mattei at its head, found gas in the Po Valley, and so established the basis of what soon became the formidable Italian state oil and gas organization, ENI. Later there came the substantial deposits at Lacq in the French Pyrenees and then the enormous field at Groningen in northern Holland.

Groningen

The Groningen field was important for three reasons. First its great size: some 2,000 billion cubic meters, or the equivalent of some 12.5 billion barrels of oil. By way of comparison, the proved reserves in the entire British sector of the North Sea were most recently estimated at 10 billion barrels. Secondly it was decided that roughly half of the Groningen gas would be exported to other European countries, at a time when international trade in gas was minuscule and in many European countries national gas distribution systems were rudimentary or non-existent. Thirdly, it was the Groningen discovery, combined with small finds in British Yorkshire, that aroused suspicions that large gas reserves might lie in a belt between the two, and so precipitated the search for gas or oil, under the North Sea, beginning in the early 1960s.

Gas was soon found in the British sector, though ironically the geology proved quite different from that of Groningen. Later oil and gas were found together at the southwesterly tip of the Norwegian sector, called the Ekofisk field, and the search moved northwards, where large volumes of oil were soon discovered, with associated gas in many cases, plus some non-associated gas fields, of which the largest so far is the Anglo-Norwegian field of Frigg.

Groningen gas production is now approaching its peak, with over half the annual output going to West Germany, France, Belgium-Luxembourg, Switzerland and Italy. France and Italy are still drawing on their deposits—in Lacq, and in the Po Valley and elsewhere in Italy. Britain has its production from the southern North Sea fields. West Germany has a very large number of relatively small gas fields, with the bulk of production coming from the region close to the Dutch border and not far from Groningen. In 1975 OECD-Europe consumed gas equivalent in heat value to just over 150 million metric tons of oil, or some 13 per cent of its total energy requirements, with Britain, Holland and West Germany each accounting for around 20 per cent of total consumption.

During the next five years Europe's gas supplies will increase substantially, and by 1980 gas will probably account for some 16 to 20 per cent of total energy consumption; but after 1980, gas consumption may grow slightly more slowly than the total energy market. During the next five years the Ekofisk and Frigg fields will come on stream, with Ekofisk gas going to West Germany, France, Belgium and Holland, and Frigg gas to Britain. The flow from the British North Sea, and from West Germany and Italy will increase. But equally important is a new factor. Gas imported from outside OECD-Europe will treble. By 1980 these imports may represent about one-sixth of all OECD-Europe's gas consumption. And between 1980 and 1985 these gas imports may double again, while Europe's own gas production will probably remain about constant.

After 1985 imports may become even more important. Production will be declining at Lacq, Groningen, the British North Sea and some of the older West German and Italian fields. New European gas supplies may be forthcoming from Statfjord and other fields in the Norwegian sector, plus, probably, others yet to be found there. But otherwise, to replace its declining domestic production, Europe will need to look outside its own borders. It is already doing so.

Europe's first external gas supplier was Algeria. Oddly enough, the first recipient of Algerian gas was Britain. The world's first liquefied natural gas (LNG) contract entailed the supply of some 1 million tons a year oil equivalent of liquefied gas to Canvey Island in the Thames estuary starting in 1966 and, needless to say, was negotiated before gas was discovered under the North Sea. The gas still arrives: LNG is useful to the British Gas Corporation; stored in liquid form (at minus 161 degrees centigrade), it occupies little space and can be regasified and used to meet demand peaks.

LNG

After the Canvey contract two contracts to France soon followed. LNG tankers now also bring Algerian gas to Le Havre and to Fos, near Marseilles. Libyan LNG, from 1972 onwards, began to arrive in Italy, and then also Spain. Algeria also supplies small volumes to the American East Coast, while LNG from the southwest coast of Alaska has been shipped to Japan since 1970. The world's largest operating LNG trade began in 1973, when Shell and Mitsubishi began to supply Japan from Brunei, where the rate of supply, now on peak at some 6.7 million tons of oil equivalent a year, makes Brunei the world's largest LNG exporter today.

LNG trade will grow rapidly in volume over the next ten years. Next year Indonesia will launch the world's largest LNG project so far when its deliveries begin to Japan. Malaysia will become an exporter on a slightly smaller scale in 1981: Abu Dhabi (also to Japan), on a small scale next year, and with a larger contract under discussion; Australia, possibly in the early 1980s to the U.S. West Coast, Japan or both. Above all, new Algerian trades to Europe and the U.S. East Coast will go into operation so that Algeria should again be the world's largest LNG exporter by 1980.

Now almost all international gas prices are linked to oil prices. This however leaves the producer exposed to the risk of a fall in price, a risk his bankers would look on with disapproval. In turn, producers have tried to limit their downside risk by inserting floor prices into their contracts. In theory the gas buyer is then left in a painful 'heads you win, tails I lose' situation.

But Algeria's gas exports to the West will be equalled by piped supplies from the Soviet Union. Indeed, for Europe, Soviet supplies will be much bigger: besides its supplies to Eastern Europe, it is under contract to supply Western Europe with some 23 million tons of oil equivalent by 1980, making it almost as large a supplier as Norway. And supplies from the Soviet Union should increase further after 1980. Developing distant Soviet gas fields requires Western steel pipe, compressors and other equipment: payment can be made by gas.

And, since the swap agreement between Iran, the Soviet Union and a West German-led group of European buyers, it looks increasingly likely that much of Iran's large available gas deposits will in fact be sold to the Soviet Union, as gas from Afghanistan and Iran has been sold on a small scale already since 1968 and 1971. This will release other, though perhaps slightly smaller and more expensive, volumes of the Soviet Union's own gas for Western Europe. Other Iranian gas will go to Japan as LNG, and possibly some to the United States.

What looks distinctly less feasible now are the two grandiose Soviet projects for exporting LNG to the United States and Japan, which came to the fore during the détente euphoria of 1973. For a start the Soviet Union has no LNG technology: Western firms would have to construct the facilities, and in unfavorable conditions. And not only are the marine distances considerable (Murmansk-U.S. East Coast, Volga-U.S. West Coast), but for both the west Siberian and east Siberian projects 2,500-3,000-kilometer pipelines to the coast would be needed, too, to be built in conditions not altogether different from that of the Alyeska pipeline, which is a mere 1,300 kilometers. The east Siberian reserves have not even been properly proved yet. And it seems more likely now that the west Siberian ones will all be piped to Europe instead, or consumed domestically.

Pipelines

Pipelines are gaining ground at the expense of LNG everywhere. Although prices have yet to be agreed, and some technical problems still to be solved, Italy and Algeria now look set to go ahead with their undersea gas pipeline project via Tunisia and Sicily. Similarly France plans to take Algerian gas via a large pipeline crossing over to Spain from either the Algerian or Moroccan coast, and then up into France. The most important LNG pipeline choice now pending concerns Alaskan gas, and whether to move it via a Canadian pipeline, a pipeline through Alaska and Canada, or an all-Alaska pipeline and then as LNG down to the West Coast. The U.S. administration will probably take a decision next year, but with non-economic considerations included in the calculations.

Despite the large number of LNG tankers on order—42 ships at end-June, against an existing fleet of 29 ships—there is little prospect of an LNG market developing, with buyers switching around between various sellers and owning and chartering tonnage, as happens in the oil market. Gas is just too expensive to move. Even moving it from Algeria to Northern Europe involves freight, liquefaction and regasification costs that absorb half the value of the gas in northern Europe. Where the distances are longer, the proportion of the final value that is left for the producer is even smaller.

The truth is that it is only the huge jump in oil prices in 1973-74 that has made feasible many of the LNG projects under discussion now. Gas prices have followed oil prices up so that it is now feasible to consider, for instance, liquefying natural gas at the Gulf and moving it to Japan, whereas previously nothing could be done with it except to flare it off. Now, besides LNG, gas producers are considering the still more complex processes of converting gas into ammonia and possibly (the next stage) into petrochemical fertilizers, provided they overcome problems of marketing the ultimate product and constructing such complicated plants in areas lacking in infrastructure of all kinds. Another possibility is to convert the gas into methanol, a fuel that can be shipped in ordinary tankers (not the refrigerated LNG ones) but is more expensive to produce.

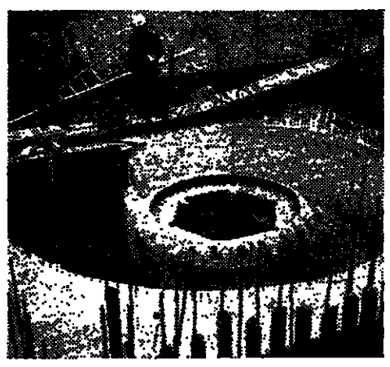
Even so, despite the jump in oil prices, forecasts of 1980 and 1985 LNG trade from observers like H.P. Drewry (shipping consultants) of London are less rosy now than before the oil price jumps. Pipelines are looking increasingly attractive: the costs of LNG plants and tankers have soared too; technical problems have slowed the building of some of the new large-scale projects; and perhaps most important, there is growing recognition of the inherent economic and financial problems in long-distance gas trade.

Huge capital investment is required. For instance, the planned LNG plant in Malaysia (Sarawak) is likely to cost $1 billion. LNG tankers now on order come out at around $150 million each, and will cost $60,000 a day to operate. Such investments make sense only if oil prices stay above a certain level. The old-style fixed-price gas contracts gave security to the producer, enabling him to raise loans for his plant and ships, or pipeline. The risk that oil prices might fall was ostensibly borne by those who bought the gas on long-term contract at fixed prices. But with the jump in oil prices, most of these old contracts have been renegotiated, including the Soviet and Dutch pipeline contracts and some of the British North Sea ones, as well as virtually all LNG ones.

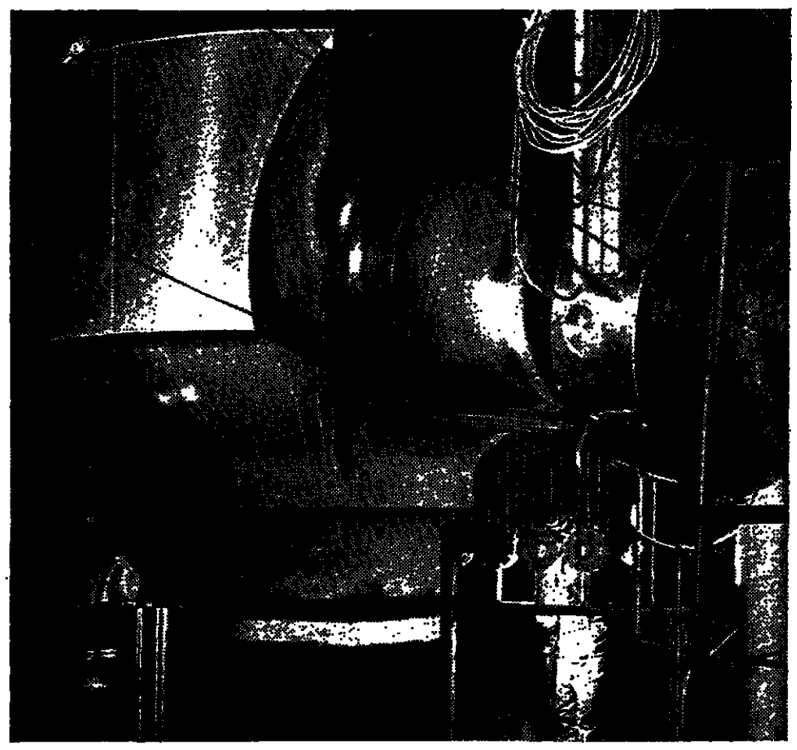
Now almost all international gas prices are linked to oil prices. This however leaves the producer exposed to the risk of a fall in price, a risk his bankers would look on with disapproval. In turn, producers have tried to limit their downside risk by inserting floor prices into their contracts. In theory the gas buyer is then left in a painful "heads you win, tails I lose" situation, having to pay more for his gas if oil prices rise, but stuck with expensive and over-priced gas if they fell below the agreed contract floor-price, which may itself be indexed against normal inflation.

Flexible Terms

Because such large sums of money are involved, buyers and sellers bind themselves tightly together by contract. Although piped gas has been swapped (for instance Soviet gas due to France was swapped with Dutch gas to Italy), long-term contracts look likely to stay the rule in international gas trade, although the financial terms may become increasingly complicated and flexible. Gas prices must reflect the realities as they are, the main one of which is the price of oil itself, which fixes how much the gas is worth in consuming country. Gas buyers and sellers are price-takers, not price-makers. But the higher the oil price goes, the more gas will become worth developing, even in ever more remote regions.



In Japan natural gas is still in its infancy. There, with pollution problems acute, natural gas is in great demand, along with other non-pollutant hydrocarbon products like liquefied petroleum gas and naphtha. But with supplies limited to what can economically be shipped long distance as LNG, natural gas looks likely to rise to more than around 10 per cent of total energy use. In the United States, production is in decline. If Alaskan supplies will do little to slow the erosion of the share of gas in the American total energy mix.



It is in Europe that the future of the gas industry is in the midst of its most spectacular transformation. From being composed of a large number of small local gas distributors, distributing to urban households what was originally no more than a by-product of the coal industry, European gas companies have switched from town gas to much more powerful alternative of natural gas, distributing what has become an attractive and important fuel to a wide range of types of customer on a national scale, and increasingly operating on an international scale in collaboration with oil consuming countries and producing countries located thousands of miles away in multi-billion dollar projects. Nevertheless, despite the enormous reserves of available gas in the world, even these look unlikely to be able to play anything like as significant a role in world energy as coal and oil have done in their heyday. For a successor to oil, the world will have to look elsewhere.

—A.F.

We supply the pumps

The main and auxiliary cycles for the energy conversion processes in thermal power stations require pumps which vary widely in design, construction and size.

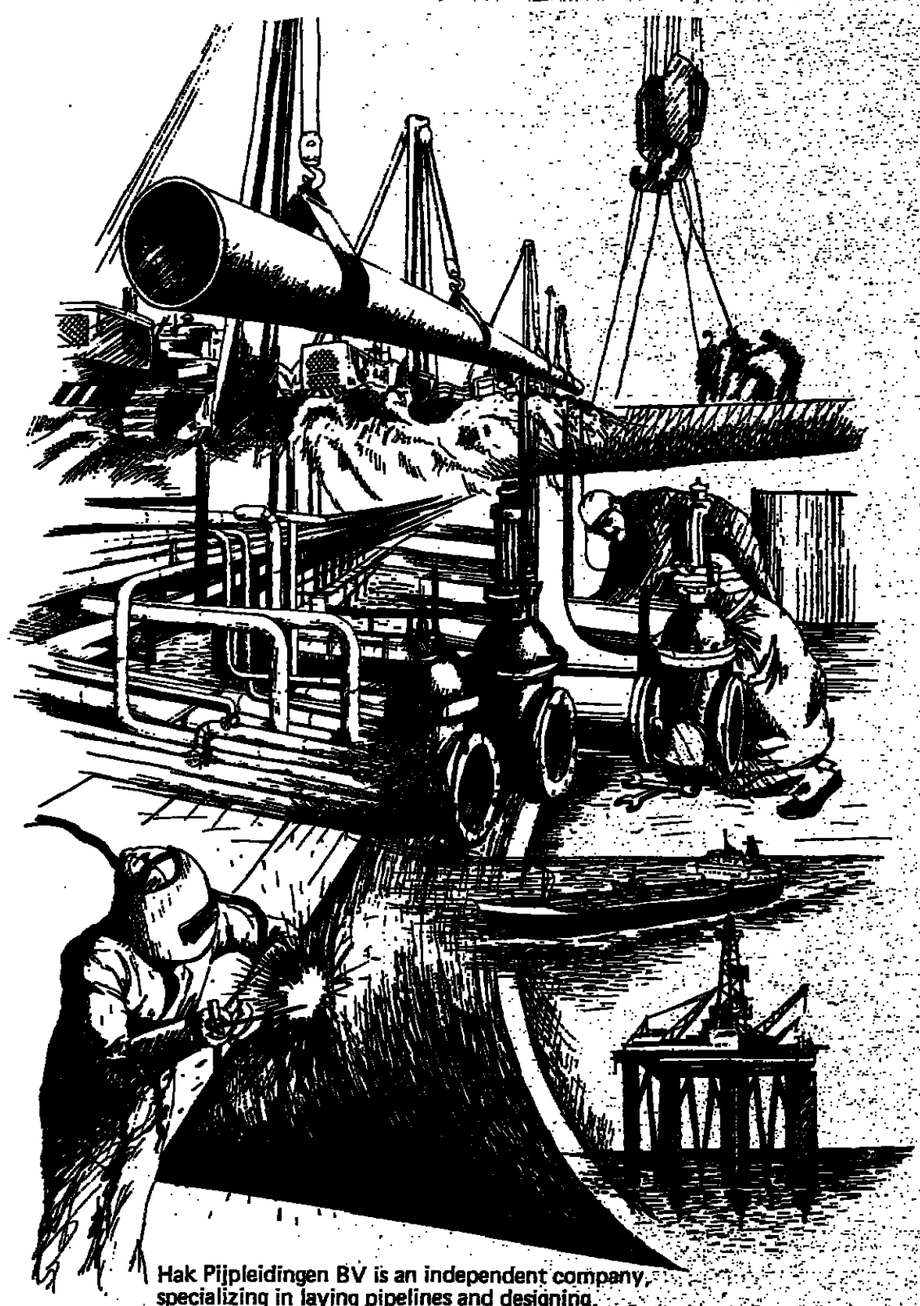
KSB are able to offer a comprehensive pump programme for all applications.

We supply the pumps for some of the largest nuclear and fossil fuel power stations at present being commissioned or under construction.

The technical quality level and reliability of our pumps are based on many decades of experience, intensive research and development and modern test methods combined with extensive quality control.

In 1905, KSB developed a ring section boiler feed pump for a discharge pressure of 40 bar.

In 1955, KSB supplied pumps for the first European research reactors.



Today, KSB pumps are operating in nuclear stations with a variety of reactor systems.

KSB provide reliable pump technology for all power station cycles.

KSB are ready for the future fully equipped with the technology to meet the most stringent requirements and backed up by a full-load test bed for main coolant pumps up to 13 MW drive rating.

Klein, Schanzlin & Becker Aktiengesellschaft D-6710 Frankenthal (Pfalz)

KSB pumps

Hak Pijpleidingen BV is an independent company, specializing in laying pipelines and designing, constructing en repairing steel constructions. At our production-yard in Holland but also all over the world, if necessary in open waters, operations can be executed with our own personnel and our own equipment.

Oil, the Major Supplier, Is Now a Political and Economic Weapon

LONDON (IHT).—Oil is the largest single source of energy, meeting 45 per cent of the world's energy requirements. At the same time oil—and its hydrocarbon partner, gas—are the nearest to exhaustion among the world's major energy sources.

A glance at the statistics, specific by nature, make the point. First, let us see, the figures for "published proven" oil reserves as estimated by the "Oil and Gas Journal" in December 1975, recognizing the gap—which may be considerable—between "proven" and "recoverable" reserves for which even a guess would be greatly misleading:

	Bill. tons	% share of total
.....	5.1	5.6
nada	1.1	1.2
th America ...	5.8	5.3
stern Europe		
mainly N. Sea)	3.4	3.8
dle East	50.1	55.5
ica	8.7	9.6
S.S.R.	11.0	12.1
tern Europe ...	0.4	0.5
ia	2.7	3.0
ner Eastern		
misphere	2.9	3.2
RLD	90.4	100.0
RLD (except S.S.R., East		
rope, China) ..	76.3	84.4

In 1975, a year in which oil consumption declined overall under the combined effect of an economic recession and previous year's price explosion, total world consumption was just over 2.7 billion tons.

So on the basis of the "published proven" reserves, the world would run out of oil in 44 years with at last year's relatively low rate of consumption.

Of course, forecasts cannot be based on such simple arithmetic. While the consumption of oil has once again resumed an upward trend (OPEC estimates a 50-per-cent rise between now and 1990), new discoveries are bound to refresh the proven reserves. It should, however, be noted that the discovery curve has been more or less flat since the 1950s, while world demand had, at least until the Middle East war, escalated.

Between 1965 and 1973 world consumption increased at a rate of more than 6 per cent: in the Western world at a rate of 7 per cent. Although it fell sharply in 1974 and 1975, the deflation rate still exceeds known additions to reserves.

In a year of economic stagnation, in a world still under the dramatic influence of the quintupling of crude oil prices, the United States, with a pro-person energy consumption almost three times that of Western Europe and two-and-a-half times that of Japan, managed net imports of only 300 million tons, 60 million tons more than Japan which is virtually without oil reserves. Western Europe, with North Sea resources about to come on stream in quantity, imported over 630 million tons, which is expected to reduce sharply when the United Kingdom and Norwegian sectors of the continental shelf are in full flow, in the 1980s. Even so, peak production is unlikely to exceed 220 million tons in any one year let alone the 300 million tons estimated by the most optimistic of forecasters Prof. Peter Odell.

This means that even in the unlikely event of oil consumption remaining at last year's depressed level, Western Europe would still have to import about two-thirds of its oil requirements. As analyzed in some detail in other articles in this survey, the elbow room for significant changes in the oil economy of Western Europe is slight in the medium term and part of the North Sea yield will go merely toward meeting additional demand.

In the United States, Project Independence inaugurated by ex-President Richard Nixon in the aftermath of the Middle East war has, partly because of the price policy, never got off the ground. The country, once the world's leading producer, is importing over 40 per cent of its oil requirements and is able to maintain a consumption reserves ratio of only 1 to 7. The reserves by the way include Alaska which is about to come on stream.

While oil cannot be considered in isolation as an energy source—the development of coal deposits (much larger than oil or gas), of natural gas, nuclear and hydroelectricity and of other as yet untapped sources are bound to have an impact on supplies and prices—its major contribution to world energy needs is likely to continue for some decades yet. So is its impact on the world economy—as the Middle East war demonstrated so dramatically. But the balance of advantage has clearly shifted to the producers who have openly declared their intention to establish what they call a "new economic order" in what is now a sellers' market.

OAPEC

OAPEC ("A" stands for Arab), a group within the group, possesses over 50 per cent of the world's total known reserves. One key country in this group, Saudi Arabia, alone has almost 20 per cent of the world's known reserves; it contributed 13 per cent to the world's oil production last year and transacted around a quarter of world trade in oil.

The politics of OPEC and the Middle East, their influence on the fortunes of Western economies, costs and prices are discussed in other articles in this survey. It is worth noting here though that the obvious conflict of interests among members of OPEC—and even OAPEC—are having a vital bearing on rates of depletion and, above all, on prices. This will be very much in evidence at the next price-fixing session, at Qatar later this month.

Some of the major producers, Saudi Arabia in particular, with relatively small populations but large reserves, would obviously prefer to conserve supplies. Oil is their only significant natural resource: their capacity to absorb huge revenues and use them for internal development is limited; in times of world inflation and reducing money values, oil is one asset which is not likely to lose its value in the longer term.

Other OPEC members, notably those with larger populations and ambitious plans for economic and social advance—Indonesia, Nigeria, Iran and Algeria are cases in point—have altogether different objectives. Some can already see their trade surpluses turn into deficits—the conservation of reserves is secondary to the quick exploitation of the sellers' market which includes a substantial price rise in crude.

While price has obviously a major bearing in the use of oil in the economy, demand is inelastic in the sense that—as the Middle East crisis has shown—even such a spectacular rise in price can lead to only relatively small reductions in consumption while individual producers (Saudi Arabia, for instance, cut production by one-sixth between 1974 and 1975) can afford to reduce supplies in the knowledge that others, more dependent on the oil revenues, will partially fill the gap.

This, coupled with the avowed aim of the producers to acquire a majority stake in national companies dominated by the "oil majors," introduces a new element in the world energy equation (discussed in detail in one of the leading articles in this survey). It has also added a twist to the search for additional supplies as well as given an impetus to the tapping of sources other than wells, onshore and offshore, such as shale and tar sands.

The production/consumption table has shown that the Soviet Union is already a substantial exporter of oil, with only just over half its surplus going to the rest of Communist Europe. Western Siberia, particularly the Tyumen oil and gas region, has resources no one has even tried to estimate but their exploitation is hampered by enormous infrastructure and distance-to-markets problems. One student of Siberia suggested recently that "the result of little more than a decade of active prospecting and exploitation of the western Siberian energy reserves is that the Soviet Union could become the richest country in the world today for prospected reserves of oil and natural gas and raw material for the Soviet petrochemical industry."

The use of oil as a political and economic weapon has already been demonstrated by the Arab countries and the reaction of the Western nations through agencies such as the International Energy Agency and the European Commission. There is no reason to doubt that the Soviet Union would similarly use it once the Siberian resources, at present modestly exploited and mainly for domestic use, become available for the export markets.

On the other hand, tar sands and oil shale are largely located in the Western world, primarily in North America. The tar sands of Alberta, Canada, are estimated to contain 300 billion barrels of recoverable oil. Exploration is being carried out by a U.S.-Canadian consortium: but in the view of Dr. M. L. Slim Sharrah, senior vice-president of Conoco (a partner in the consortium), the price of crude from the sands would be about $27 a barrel, more than twice the present average price of crude.

World shale reserves are believed to be even larger: in Scotland, for instance, shale was mined until as recently as 1962 when it was discontinued on economic grounds. It is fueling power stations in the Soviet Union where it is also a base material for gas production. China also has large reserves: but biggest deposits are believed to be in the United States, where the tar sands of the Rocky Mountains alone are estimated to hold 600 billion to 1,000 billion barrels of oil. They were probed but abandoned by a U.S. consortium in 1974 on economic grounds: according to Dr. Sharrah, the cost would have been around $24 a barrel, about twice the average cost of oil.

Coal is yet another source of synthetic oil, used particularly by the Germans, with meager oil but substantial coal reserves, before and during the Second World War. On the basis of current processes, Dr Sharrah's estimated price is $24 per barrel.

Nevertheless, with coal resources many times those of oil and gas and, like oil shale and tar sands, much of it located in the Western Hemisphere and in Europe, oil—and gas—from coal may be considered a strategic reserve in an economic as well as a political sense.

The world has already witnessed a major upheaval in energy economics as a result of the oil price increases three years ago. The brief embargoes imposed by Middle East countries on certain consumers, including the U.S. and the Netherlands, have alerted the West to the danger of political action. Resources that may be uneconomic to exploit today or left untapped on environmental grounds could provide a partial though admittedly temporary solution to the world's thirst for oil which is not only a major energy source but also the base material for important industries such as petrochemicals, synthetic textiles and rubber and even food.

—A.H.

North Sea Gas and Oil Help to Ease Dependence

LONDON (IHT).—In global terms, the North Sea harbors a relatively small—between 3 and 3.5 per cent—proportion of the world's total oil and gas reserves. In terms of the countries enjoying the benefits of the discoveries, the United Kingdom, Norway and the Netherlands (if one includes the adjoining onshore gas field of Groningen), the North Sea find is a boon. It is proportionately less so for Western Europe as a whole, although it does bring important strategic and economic advantages.

But even for the three countries most directly affected, the impact varies. In Norway, for instance, the state through its instrument Statoil has been a participant from the start. In the United Kingdom on the other hand, the British National Oil Corporation (BNOC) is a recent arrival on the scene and is still in throes of negotiations with some of the major oil companies such as Esso, Shell, Mobil, Chevron about participation, with agreement reached with only a few, including Gulf, Conoco, BP (provisional) and Burmah (partial).

In the Netherlands, the European Community's largest natural gas producer, participation is optional for the government: in Britain in respect of the first four exploration licensing rounds it is optional for the companies, with only the fifth being obligatory for the latter. Nevertheless, BNOC hopes to have direct control over at least a quarter of oil produced in the United Kingdom sector of the North Sea in 1980 (the year of anticipated self-sufficiency) and influence the disposal of a further quarter.

Another, perhaps more important difference is in the rates of exploitation of this important resource. The United Kingdom wants to push ahead as quickly as possible to alleviate her domestic economic problems, particularly those of balance of payments and public expenditure. For even though this year's harvest of the North Sea, with six fields (including two major ones, Forties and Brent) on stream, is expected to meet at least 15 per cent of the country's oil needs, oil imports will still cost about $8 billion—the main reason for the continuing large balance of payments deficit.

On the other hand if, as confidently expected, production reaches the 100 million tons mark in 1980, it will not only satisfy volume requirements but by judicious mixture with Middle East oil, the high-grade North Sea product should earn extra currency more than offsetting the cost of lower grade imports. As Tony Benn, the Energy Secretary, has pointed out, oil exports are generally paid in dollars and are consequently unaffected by the sliding pound sterling.

As for revenues, the British government expects a net total impact of around $9 billion on the gross national product, through royalties, taxes and earnings in 1980 and possibly as much as $25 billion in 1985. Up to last year when the oil began to flow, that impact had been negative, with a great deal of currency expended in buying equipment and services from abroad.

Total production in the United Kingdom sector may rise in the 1980s to anything between 130 million and 150 million tons (according to optimistic experts, it could be as high as 200 million tons). Then, depending on the exploitation of new discoveries, including future ones, output should level off before tailing off in the late 1980s.

Norway, with a population of under 4 million (compared with the United Kingdom's 55 million) is already self-sufficient in oil and, like Britain, in natural gas. Unlike Britain, however, it is more anxious to conserve its major new energy resource by slowing down the rate of exploitation, particularly as hydro-electric power still meets two-thirds of the country's energy requirements.

Although Norway produced oil years before the United Kingdom, this year's output (at around 10 million tons) will be well behind Britain's and the government has put off until 1978 the start of exploratory drilling north of the 62d parallel. Revised Statoil estimates put the 1980 production target at 58 million tons, rising to 68 million tons in 1985 and peaking at little over that in 1987. The licensees' own estimates are slightly higher.

Nevertheless, Norway will become a substantial exporter of both oil and gas (long-term agreements for the latter have already been negotiated with the West German and British governments) and its not altogether unpleasant problem is the absorption of large new revenues in the blood-stream of a prosperous but small economy.

Nor is the government policy of slowing down the rate of exploitation universally popular. Manufacturers of exploration-related equipment such as drilling-rig and production-platform builders have run short of orders and are having to pay off large numbers of workers—as is the case on an even larger scale in the United Kingdom, with little chance of building such huge structures outside the North Sea.

Natural gas is playing an increasing role in the energy pattern of most countries bordering on the North Sea and no more so than in the Netherlands, 55 per cent of whose energy needs were met by gas last year. In addition to the onshore field of Groningen, a production platform has now been ordered for the first of the offshore fields, with evidence of more to come.

The country's energy economy is a two-fuel one, oil and gas, with gas exports roughly paying for oil imports which, in any case, are a source of revenue through oil traffic at Rotterdam harbor, Europe's largest oil port. This may be one reason why the share of gas is likely to decline in the Netherlands' energy pattern, in the 1980s.

One of the important by-products of the North Sea discoveries has been the considerable boost to the engineering, shipbuilding, electrical, steel and construction industries as well as to port developments and other services in the countries most concerned.

The effect of a slowdown in exploration and development in the Norwegian sector on local industry has already been mentioned. In the United Kingdom, where around 80,000 workers are directly or indirectly employed in North Sea activity (the majority in Scotland), the downturn has been experienced mainly in the construction of platforms, jackets and modules, with two major platform yards completely without work and two others still awaiting their first contract, as well as in growing unemployment figures.

As for the other areas of offshore services and supplies, J. Dickson Mabon, the United Kingdom Energy Minister of State, has pointed to the $8 billion a year offshore market worldwide, of which the U.K. market (at under $2 billion last year) was only a fraction.

The one consolation British suppliers have is that their share of the local offshore market is on the increase—from only a minute share in the early 1970s and 40 per cent in 1974 to 52 per cent last year.

In Britain, prediction is more hazardous because of all the discoveries—and there have been 35 in the past two years alone—only 15 have so far been declared commercial, including the smaller United Kingdom segment of the vast Statjford Field (the major part is in the Norwegian sector) and the Murchison Field announced earlier this year.

There was a hiatus in exploration and development while the Labor government made up its mind about the new taxation regime and state participation. The escalation of development costs, partly caused by inflation and partly by the devaluation of the pound sterling, has also led to schedules being revised. Nevertheless according to BNOC chairman Lord Kearton (not refuted by other operators), a return of 30 per cent-plus in most oil fields should be an attraction to investment. BNOC itself hopes to be profitable by 1980, by which time, BP's Forties Field, the first of the major fields to come on stream, should have repaid all its development costs.

—A.H.

AMAREX

AMAREX Inc.

Amarex is engaged principally in the exploration, development and operation of gas and oil properties, primarily domestic onshore United States. In conducting its business, the company organizes, manages and participates in oil and gas drilling partnerships.

In the United States, Amarex has conducted 26 drilling partnerships with over 1,400 investors. In Europe, Amarex has conducted 3 drilling partnerships with over 300 private investors.

Amarex offers private European investors an investment opportunity in the oil and gas industry in the United States by:

—Participation in Limited Partnerships for the exploration development of oil and gas reserves in the United States. Amarex acts as the General Partner and Partnership Operator.

—Participation in Limited Partnerships for the direct purchase of income producing oil and gas properties in the United States in which Amarex acts as General Partner and Partnership Operator.

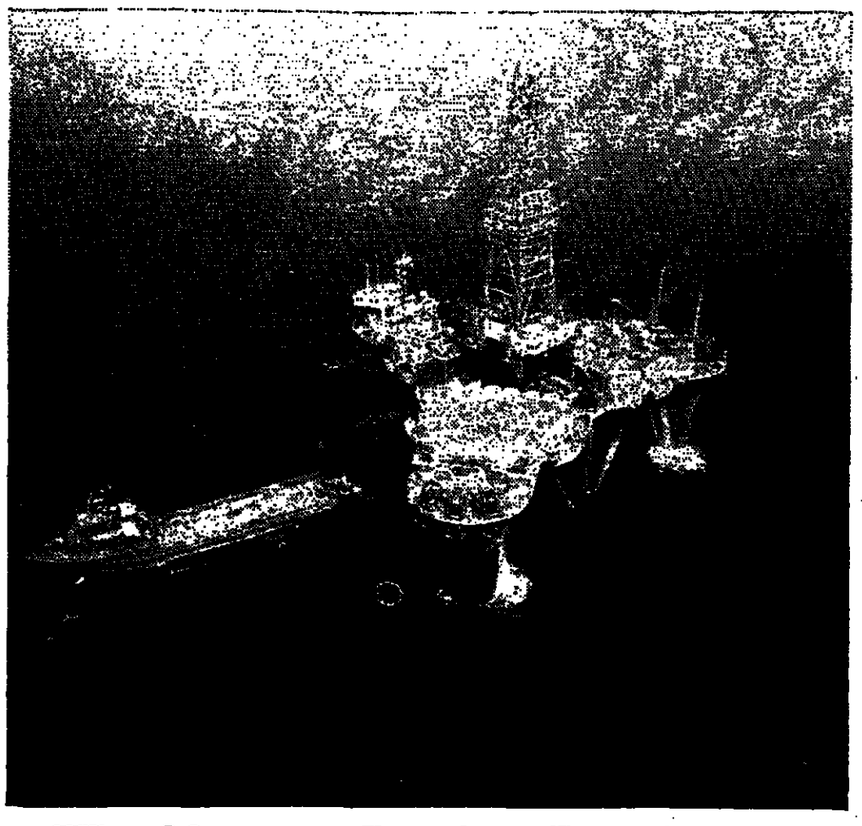
mezzogiorno



Area: more than 130.000 sq. km.
Population: about 20 million with a
per capita income in 1975 of 2,200 dollars.
Private consumption in the same year: 32 billion dollars.
These are the vital statistics of the Mezzogiorno,
as Southern Italy is called.
The region is an economic and productive reality
that no business interested in locating in Europe
can afford to overlook.
In fact, as an evidence of the interest shown by
the international business community,
the Mezzogiorno counts 277 manufacturing plants set up
with the participation of foreign investors.
Expanding markets, availability and trainability
of labour, incentives, infrastructures;
these are the main inducements
to choosing the Mezzogiorno, as well, of course,
as its ideal geographical position between
the Mediterranean and the European countries.

The Mezzogiorno offers prospective investors
cash grants up to 40 % of fixed investment,
soft loans, corporate tax wavers and
a reduction in the cost of labor.

Further information is available
on request from IASM — Institute for the Assistance
in the Development of Southern Italy —
a non-profit organization set up to promote
industry and tourism in the Mezzogiorno
and to provide consulting aid to companies
already operating there or planning to do so.

Eni's role in Italy's energy supply

Under the National Energy Plan, it is ENI's a task to play a predominant role in the supply of energy to the country.
Today, the ENI Group provides over 40% of the country's oil and natural gas requirements.
This achievement is the result of twenty years' activity by Agip in the exploration and development of mineral resources both in Italy and abroad.
After the second world war, the role of oil, as compared with the more traditional energy sources, dominated the international market.
This factor applied with particular force to Italy, due to the shortage of its own alternatives to oil.
This situation led ENI into making an all out effort in exploration for oil and gas in order to become as self-sufficient as possible in its own crude supplies for the domestic market. Today, oil covers 75% of the country's total energy requirement.
On land, ENI's exploration efforts in Italy have covered all areas wherever the possibility of a discovery existed. This approach also applied to territorial waters and the continental shelf.
Since 1968 the outstanding progress made in geophysical techniques and equipment has allowed ENI to develop a new exploration programme starting with the Po Valley, in order to extend its knowledge to the older and deeper formations. Exploration has been carried out at depths of over 6.000 metres on land, whilst offshore drilling has taken place in water depths of over 200 metres.
Natural gas reserves in Italy have now been proved at nearly 200 billion cubic metres. Total crude production in 1975, through various joint ventures, amounted to 45 million tons. Of this 14.4 million tons is ENI's quota, either through direct participation or through acquisition.
New discoveries have been made in Indonesia, the North Sea, Congo and Trinidad.
At the end of 1975 ENI companies in Italy and abroad held exploration permits and development concessions covering nearly one million sq. km.
ENI has been involved for some time in the nuclear fuel cycle. This includes the acquisition of natural uranium, its enrichment, the supply of fuel elements, the reprocessing of irradiated fuels and the relative auxiliary services such as storage and transport.

Eni

Environment Vs. Economic Growth

PARIS (IHT)—It was well before the oil crisis that environmental considerations began to play a role in the energy field. As the world became richer, people began to question whether it was worth sacrificing a certain quality of life just to assure a certain quantity of wealth. Energy was a major factor in economic growth, but all too often its production involved serious environmental and ecological damage and the emissions of chemicals which were unsightly and damaging to health. So it was hardly surprising that energy producers were a major target of environmentalist feelings.

Opposition was raised to the flooding of valleys for hydroelectric schemes, to the scarring of landscapes through strip-mining and to the oil-pollution threats posed by offshore activities and tanker transport, to the use of rivers for coal-mining operations and nuclear power stations, to sulphur dioxide and particulate emissions from oil refineries, coal and oil plants, to the nitrogen oxide fumes from cars and trucks and to the radioactive dangers of nuclear power plants. Developing countries might still feel that pollution was a reasonable price to pay for higher economic growth, but for an increasing number of industrialized countries that price was becoming too high.

However, since 1973 the position of the environmentalists has become harder to defend. With the increase in energy prices it has become much harder to absorb the extra cost of meeting environmentalist requirements and with economic growth well below the pre-crisis era the choice may no longer be between a polluted society with high growth and a non-polluted one with a slightly lower one, but between a polluted society with low growth and a non-polluted one with no growth at all. For not only are the environmentalist groups making it extremely difficult for consumer countries to develop their own indigenous energy resources and thereby reduce their dependence on imported oil, but they are threatening to create an eventual energy shortage, which could reduce growth altogether. During the last two years the dole queues have brought a touch of reality to the academic debate between growth at all costs and no growth at all. It would be a pity if in their concern for the quality of life environmentalists placed such obstacles on economic growth that the very basis for that lifestyle were destroyed.

Strong Attack

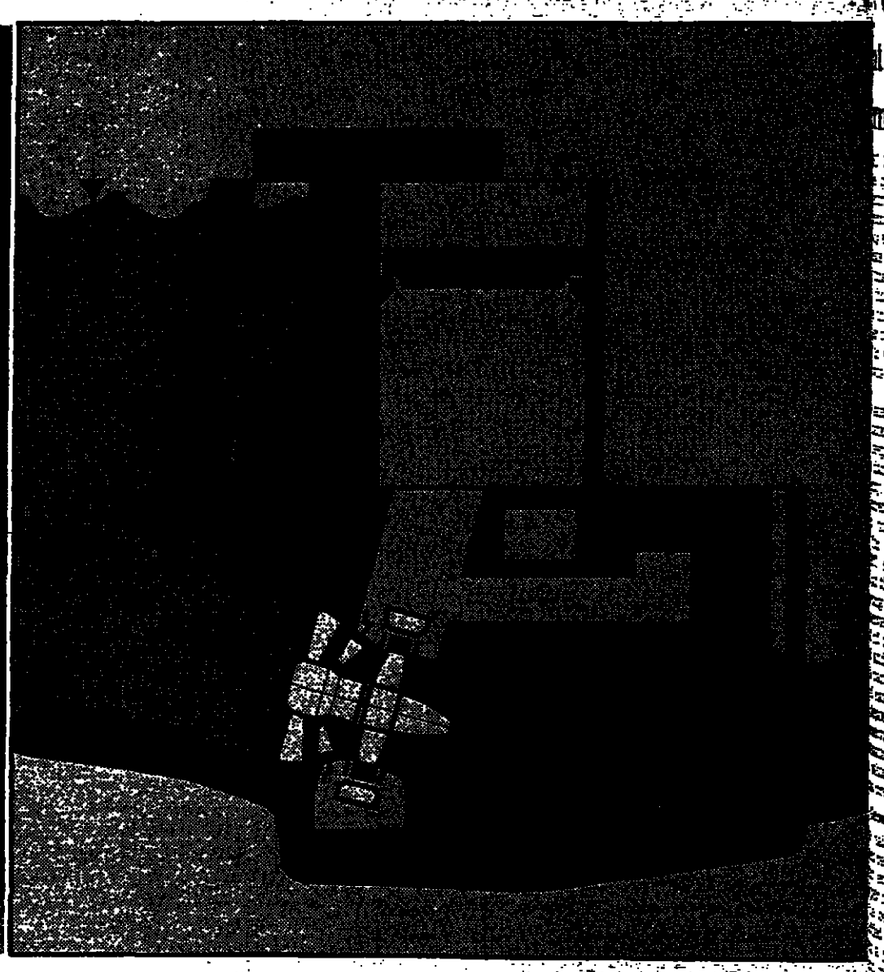
The country which could play a key role in developing indigenous energy resources happens to be the place where environmentalist feeling is the strongest. Already before the energy crisis U.S. environmentalists were blocking attempts to build oil refineries and oil ports in the east of the United States, had forced the government to introduce tough controls on automobile emissions, had held up the award of offshore exploration concessions and posed problems for utilities and coal companies; but since 1973 they have slowed down development of the Alaskan oil fields, prevented the opening up of strip-mines in the west of the United States and brought the country's nuclear program to a virtual standstill.

The U.S. example has been taken up quickly by other countries, especially those with a high standard of living. In Sweden it is proving difficult to obtain authorization for new hydroelectric schemes and the nuclear program is under fire, in Norway North Sea development is coming under strong attack, in Britain nuclear fuel enrichment programs and fast-breeder reactors are a subject of controversy, in France, West Germany and Japan ambitious nuclear expansion programs are being subject to increasing harassment, while in the Benelux countries and Denmark they have been halted altogether.

It would be unfair to place all the blame for delays in energy development on the environmentalists. In many fields governments have in fact relaxed environmentalist regulations in response to the economic recession, and slowdowns in energy programs have been due more to the flattening out of energy demand growth, financing problems and the failure of governments to define their energy policies than to any environmentalist pressures. But as the economic situation begins to improve there is a danger that excessive concern for environmental protection could place consumer countries in a dangerously vulnerable energy situation.

Of course, it is extremely healthy that the general public is ready to question energy choices. Many people would claim that energy decisions are really too important to be left to the energy experts. Experience has shown that environmental regulations do not necessarily add much cost to energy production and that in some cases the application of such regulations actually forces energy producers to adopt more efficient methods. It is arguable that industrialized countries can still look forward to economic expansion, even with higher energy costs, so long as wealth is redistributed. With no real prospect of an energy shortfall for another thirty or forty years, there may well be a case for paying more now for energy and thereby speed up the development of new energies such as solar rather than rush into the development of conventional energy sources like coal or nuclear which could result in irreparable damage to the environment. If there are doubts about nuclear, any sacrifice might be worth accepting to avoid a nuclear holocaust.

But if the debate concerning environment and energy is a healthy one, it is essential that it be well-informed and rational. Unfortunately this is not always the case. Until a few years ago environmentalists could still be dismissed as individualistic cranks who were just not prepared to pay the price of living in society. In some cases this dismissal was justified in that many members of the movement merely wanted to return to a more simple pre-industrial society.



But today governments and energy producers are being faced by an increasingly powerful movement which is taking on a radical political character. As a result, it is becoming increasingly difficult to distinguish between a genuine protest over environmental factors as such and general opposition to the government in power and to giant corporations—whether it be from people who resist change or are seeking it. The danger is that energy decisions may now be taken for the wrong reasons.

Governments and energy ducers have largely themse to blame if the present situa has arisen. It is because paid so little attention to legitimate environmentalist tests of the 1960s that they the subject of such hostility day. It is because of the that they have stifled pu debate or withheld informa that opposition movements rallied to the environmenta cause. But it is disturbing to how opposition parties in their turn arouse irrati fears in the public mind wit cealing the cost implications of environmentalist demands, hind the high-minded spee private interests are also all often at stake. The car-o objects to the extension of ownership, but will not giv his own car, local communi will not accept a nuclear re nearby, but favor adoption nuclear power, the well-i are concerned about the qu of life, but oppose the econ growth required to spread t others. All too often envi mentalist lobbying is but beginning of a bargaining cess aimed at obtaining m mum compensation for the dividuals concerned.

It would be surprising if debate on energy were any i disinterested than that on other issue affecting people is also only natural that a d cratic discussion of co choices will result in delays would madden any techn and in decisions which w horrify a scientist, but the the price to be paid for nocracy. Rather than assume the general public is quite capable of understanding environment/energy clash therefore not worthy of obje information, governments, dustry and even the oppos should start treating peopl responsible human beings. in this way will nuclear p stop being a political bogey the right balance between en development and economic gr established. For in scientific economic terms a balance always be found. It is onl the political level that issues to be expressed in ethic terms.

—M.I

Suddenly, the world has thousands more energy-giving waterways.

Hydro-electricity has been with us for many years. But hydro-electric generation costs money to install – so much money that usually only with the larger heads of water does the energy output justify the cost.

Now, Escher Wyss have designed the revolutionary STRAFLO® (straight-flow) low-head turbine – a hydro-electric generation system which reduces manufacture, installation and civil engineering costs so dramatically that even the low power output of small heads is enough to make exploitation entirely practicable. In addition, the STRAFLO® turbine brings a new level of cost-effectiveness over the entire low-head range normally serviced by Kaplan and Bulb turbines. This is expected to result in total savings of up to 30%.

The water passage of the STRAFLO® turbine is positioned horizontal or near horizontal, and the turbine and generator are combined in a single plane perpendicular to the water passage axis. This replaces the complicated structures of the older, vertically-installed sets. Also, the surface structures can be reduced to a relatively small weir, incorporating the powerhouse. The new STRAFLO® turbine gives the world vast new energy sources through making low-head installation practicable in thousands of smaller waterways.

Suddenly, exploitation of hydro-electricity has become cheaper, more efficient and less environmentally obtrusive than ever before.

The STRAFLO® Group is formed with the object of furthering the economic development of river and tidal energy resources. This will be achieved by employing straightforward technology embodied in the STRAFLO® turbine designed by Escher Wyss in close co-operation with renowned turbine and generator manufacturers and civil engineers.

Manufacture under licence is envisaged world-wide under the auspices of the STRAFLO® Group.

VEBA Earnings Rise

...DUESSELDORF, Dec. 8 (AP-...).—Consolidated net profit of ...BA AG in the first nine ...nths rose to 152 million ...utsche marks from 86 million ...k in the year earlier period, ... energy and oil company said ...day.

...External turnover totaled 20.5 ...llion DM compared with 18.1 ...llion DM.

...loney Growth ...een at 9.2% ...n Germany

...FRANKFURT, Dec. 8 (AP-DJ). ...The average growth of West ...rmany's central bank money ...pply will probably be 9.2 or 9.3 ...r cent by the end of the year, ...nhard Gleske, a Bundesbank ...rector, said today.

...He noted that this growth ...uld exceed the Bundesbank's ...get of 8 per cent, but said it ...responded to economic develo...ments and was not a cause for ...ncern.

...Mr. Gleske said, however, that ...e central bank's goal in 1977 ...uld be to keep bank liquidity ...wn and to dampen any infla...nary tendency. He declined to ...e any concrete indication of ...at target the Bundesbank ...ght set for money supply ...wth in 1977, saying the goal ...uld be set at the central bank ...ncil's meeting Dec. 16.

...Various observers have put the ...obable goal of the Bundesbank ... between 6 and 7 per cent.

...The central bank money supply ... the total of cash in circulation ...d bank deposits subject to ...nimum reserve requirements ...d is the measure of the money ...pply upon which the Bundes...nk bases its credit policy.

5.5% Growth Seen

...Mr. Gleske said the Bundes...nk estimated real growth of the ...st German economy in 1976 ...uld be 5.5 per cent, above pro...tions in the beginning of the ...r. He added that inflation, ...ich showed a year-to-year rise ...3.7 per cent in November, has ...len well below original pro...tions. In terms of monetary ...icy, he said, the Bundesbank ...sidered the year successful.

...He stressed, however, that the ...l of the Bundesbank would be ...secure stability in the German ...netary situation. Responding ...various calls from foreign of...ials that the time had come ... Germany to reflate, Mr. ...eske said stable economic ...wth and lasting reduction of ...employment would come only ...h price stability.

...Regarding the outlook for 1977, ... Gleske said a further reduc...n in inflation would depend ...gely on the outcome of wage ...otiations and the effect of ...ial security deficits on the fed...l deficit.

...Mr. Gleske noted that the large ...eign exchange inflows result... from currency unrest, which ...aled 8.5 billion marks from the ...ginning of July to the realign...nt of the currency snake in ...d-October, had ceased and in ...t there had been 4 billion ...rks of foreign-exchange out...ws since the realignment.

FINANCIAL NEWS AND NOTES

Creusot-Loire to Lead in Reactors

Creusot-Loire, a unit of the Empain-Schneider Group, is to become the leader among French constructors of fast-breeder nuclear reactors under the terms of an agreement worked out with Alsthom-Atlantique. Creusot will have a 51-per-cent stake in Ste. Novatome, the company in charge of developing the high-speed reactors, instead of 40 per cent as originally planned. The French Atomic Energy Commission will have a 34-per-cent stake, while Alsthom is to hold 15 per cent. In compensation, Alsthom is to increase its cooperation with Creusot-Loire in the field of hydroelectric turbines. Alsthom-Atlantique recently acquired the turbo-alternator division of Cie. Electromécanique, a unit of Brown Boveri of Switzerland.

Toyo Kogyo Sees Pre-Tax Profit

Toyo Kogyo expects to report a profit before tax and special items of over 3 billion yen (about $10 million) for the fiscal year ended Oct. 31, compared with the deficit of 17.32 billion yen in the preceding fiscal year. A company spokesman says sales are expected to total 590 billion yen, an increase of 18 per cent over the 496.48 billion of the previous fiscal year. The company sold 721,000 motor vehicles, an 11.8-per-cent increase, despite an 18-per-cent decline in domestic sales to 274,000 vehicles. This was more than offset by a 42-per-cent increase in export sales to 447,000 vehicles.

AEG Hopes to Pay Dividend in '77

AEG Telefunken still hopes to pay a dividend for 1977 but does not intend to make any payout form reserves, says managing board chairman Walter Cipa. He says the company's performance this year has improved considerably from 1975 but is still not satisfactory. AEG's financing means are still ample, he adds, as credit lines totalling 1.8 billion deutsche marks, of which 600 million DM is long term, have not been touched yet. AEG has already said it does not plan a dividend for this year. Last year the parent company lost 106.8 million DM and Mr. Cipa says it is completely open whether second-half earnings this year will compensate for first-half losses.

FPC Staff Backs Arctic Gas Pipeline

The U.S. Federal Power Commission staff has recommended acceptance of the Arctic Gas project's plan for a $9-billion pipeline across Canada to move natural gas from the Alaskan North Slope to U.S. markets. A staff brief called the 15-company consortium's proposal "vastly superior" to competing proposals by El Paso and Northwest Energy Co. El Paso wanted to build a line across Alaska parallel to the Trans-alaska oil pipeline, liquefy the gas and transport it by tanker to a West Coast port in the lower 48 states. Northwest proposed a pipeline route along the Alaska highway to British Columbia. The FPC staff made its recommendations in a brief filed with an FPC administrative law judge now considering the three proposals. A decision is due next month, after which the commission is expected to make a recommendation to President Jimmy Carter by May 1. The president is required by law to select a route by Sept. 1 and propose it to Congress, which would have 60 days to ratify the decision.

Simon Seen Returning to Salomon Bros.

Treasury Chief Says Decision Not Yet Made

By Philip Shabecoff

WASHINGTON, Dec. 8 (NYT). —Treasury Secretary William Simon is planning to return to Salomon Brothers, the New York investment banking firm he left in January, 1973, to join the Nixon government, friends of Mr. Simon within the administration said yesterday.

Asked about the report, Mr. Simon said by telephone, "I've made no commitment. It would not be proper for me to even have any substantive discussions until I leave Washington. I can honestly say I have not made a decision."

William Salomon, managing partner of Salomon Brothers, said that he hoped Mr. Simon would rejoin the firm. "We want him back," Mr. Salomon said in a telephone interview, "but we've had no discussions."

Mr. Salomon said if Mr. Simon did return to the firm it would be as "an important partner."

"Because he has been Secretary of the Treasury, he obviously would be more important to us than he was before," Mr. Salomon said.

Mr. Simon, 49 years old, also plans to remain active in public affairs, according to his friends. His name has been mentioned as a possible candidate for the chairmanship of the Republican National Committee. He has also discussed a possible run at the presidency in 1980 with some members of the Republican party, according to an informed Treasury source.

Mr. Simon was one of seven partners on the executive committee of Salomon Brothers when he was tapped by former President Nixon to become deputy Treasury secretary. At the time, he was in charge of the firm's government and municipal securities department and, according to published reports, earning $2 million to $3 million a year.

'Straddle' Trades Labeled Uncompetitive

N.Y. After-Hours Trading In Silver Hit by U.S. Unit

NEW YORK, Dec. 8 (AP-DJ). —The days of "straddle" trading silver futures on the Commodity Exchange here after normal market hours may be numbered.

Members of the Commodity Futures Trading Commission reviewed yesterday a report prepared by the staff of the federal agency's trading and markets division that says the practice "does not appear to meet the standard of an open and competitive trading method."

A "straddle" trade (also called a "spread" or a "switch" trade) is simultaneously buying and selling futures contracts in the same commodity with different expiration dates. It often is used by traders as a means of deferring or reducing their income taxes.

The Commodity Exchange silver-futures market normally ceases trading at 1915 GMT. Straddle trading frequently extends well beyond that time. On Nov. 15, for instance, straddle trading continued until nearly 2300 GMT.

The commission, in effect, gave its staff authority to meet and discuss the findings with exchange officials, who then will decide whether the practice should be stopped or modified and, if so, how. Thomas Russo, division director, said the report "was the first step toward elimination" of after-hours trading. Commission chairman William Bagley said that "as of now, with the facts before us, we don't look with approval — the practice." The staff was given up to 40 days to report back to the commission.

Lee Berendt, president of the exchange, said he preferred to "wait and see the report before commenting" on its findings.

The study says exchange officials have argued on behalf of after-hours straddle trading because activity during normal hours is so hectic on days of large trading volume. After-hours straddle trading is not allow...d in the other sizable silver futures market on the Chicago Board of Trade, however.

The study found that although the volume of after-hours straddle trading has not been substantial, it increased significantly in the fourth quarter last year, accounting for as much as 36 per cent of the total volume of straddle trades in the months when trading for tax purposes usually occurs.

The staff's study also noted that professional traders do not have to enter their straddle-trade orders before the market closes as required for brokers' customers; after-hours straddles do not have to conform with the price differentials between futures delivery months that are established during the session, and that, in many cases, these price differentials are prearranged.

Fiat Investment By Libya Called Purely Financial

ROME, Dec. 8 (Reuters).—Libya's $415-million investment in Fiat, announced last week, is a purely financial transaction and the sole concerns are profit and the success of the company, Abdullah Saudi, chairman of the Libyan Arab Foreign Bank, said today.

Mr. Saudi told a news conference that he believed the two most important aspects of the deal were the benefit to Italy's balance of payments and the declaration of confidence in Italian industry and the Italian economy which it implied.

He said the two Libyan members on the 15-seat Fiat board intended to take an active interest in the company's operations. "We want to promote the business so there will be more success, more profit and more dividends," he said.

Asked whether political considerations could influence the votes of the Libyan directors if, for example, Fiat decided to build an assembly plant in Israel, he said: "I think you will agree that in any institution, decisions are made by the board, by a majority of votes irrespective of votes against."

Prices Rise On Wall St. After Slipping

Investors Said Seeking Lower-Priced Issues

NEW YORK, Dec. 8 (IHT).—Prices advanced again on the New York Stock Exchange today, overcoming some weakness early in the session as the broad market advance in the near future.

Analysts said investors continue to seek out stocks whose yields have improved relative to bonds due to falling interest rates.

After being in the red most of the day, and down about 4 points by noon, the Dow Jones industrial index closed up 2.49 at 963.18. It was down 1.5 at 3 o'clock.

Volume totaled 24.56 millions shares, compared with 26.1 million yesterday. Advancers outpaced decliners by about 970 to about 490.

Paul Bernstein, of Drexel Burnham, said investors have turned to lower-priced issues because of doubts about the ability of blue chips to mount another strong market advance in the near fortune.

Analysts have lately been "marking down" their estimates on basic industry issues, he said.

Mr. Bernstein also said investors have shied away from growth issues because of worries that currency devaluations and lagging economies outside the United States will limit their earnings.

Electronics issues were mostly higher. IBM rose 2 1/4 to 273, Texas Instruments 1 3/4 to 105, Digital Equipment 1 1/4 to 54 3/8, and Motorola 1 1/2 to 51 3/4, but Burroughs lost 1 1/4 to 88 1/2.

Active McDonald's lost 3/4 to 54 7/8 and Sony tacked on 1/8 to 9 1/8. General Motors, also active, rose 1 1/8 to 73.

Holiday Inns picked up 1 1/8 to 13 1/8 in active trading and Ramada Inns, also active, rose 5/8 to 4 1/4.

Bendix lost 1 3/4 to 42 1/2. It terminated its proposed acquisition of Ex-Cello-O Corp., which lost 2 1/4 to 23 1/4.

Rebates of Indirect Taxes at Issue

U.S. Court Suits Threaten Trading Rules

By Edwin L. Dale Jr.

WASHINGTON, Dec. 8 (NYT). —Several time bombs in the foreign trade field are ticking quietly away, timed to explode during or shortly after the transition to a new presidency.

The one that contains the greatest potential disruptive effects—on U.S. importers and retailers, on U.S. relations with Japan and other industrial countries, and on trade policy generally—is the least known. The bomb is ticking in a New York courthouse, site of the Customs Court, and a decision could come at any time.

At issue is whether the Japanese practice, in effect for years, of rebating for exports a "commodity tax," which is much the same as a manufacturer's excise tax, amounts to a "bounty or grant" within the meaning of the 80-year-old U.S. countervailing duty law.

Suit by Zenith

Zenith Radio Co., which has been struggling against Japanese competition in various ways over the years, has filed suit, claiming that the tax rebate is indeed a subsidy and, therefore, must be offset by a special countervailing duty.

The suit covers all consumer electronic products — television sets, radios, citizens band radios, tape recorders, stereo sets. Imports from Japan are now running at a value of $1.5 billion a year.

Whatever the customs court may find, the case is almost certain to be appealed, by Zenith or the government. But there is a major, though little known, problem.

If the court, as some government trade officials fear, rules in favor of Zenith, and assuming the government appeals, there will be an immediate "suspension of liquidation" of duties on the affected products. This means that importers will be unable to settle the final duties they will owe, pending the long process of appeal.

They will not know what duty will be eventually payable. The risks will be so great that some importers say they will simply stop buying these products.

This would be disruptive enough. But the implications are even greater.

For 30 years the international trading rules established by the General Agreement on Tariffs and Trade have held that rebates of indirect taxes such as the Japanese tax—as distinct from direct income or profits taxes—are not subsidies. If the United States now unilaterally declares that they are subsidies, much more than Japanese television sets will be involved.

"This case is a real sleeper," says Peter Suchman, deputy assistant secretary of the Treasury in charge of trade matters. "It has more potential for harm to the international trading system than all the rest of the trade cases put together."

Pending in the same customs court is another suit, filed by United States Steel Corp., alleging that the longstanding rebate on exports by European Economic Community countries of their "value-added" tax also amounts to a subsidy within the meaning of the countervailing duty law. If the court finds affirmatively, steel imports from Europe worth about $2 billion annually would be immediately affected, with the same problem of "suspension of liquidation" of duties. Eventually all manufactured goods exported from Europe could feel the impact and the world's trading rules would be thrown into confusion.

Escape Clause' Petitions

Apart from the cases in the Customs Court, the U.S. International Trade Commission is moving toward three major decisions in "escape-clause" petitions under the 1974 trade law. While actual cases of import restraint under this and other provisions of the law have been very few so far—the chief one being stainless and other specialty steels—the three pending cases pose a new test of whether the United States will move in a restrictive direction. Viewed another way, they pose a test of whether the 1974 law gives a genuine chance of relief for industries that can show damage from imports.

The cases are shoes, color television sets and sugar. The commission is considering shoes for a second time, under orders from the Senate Finance Committee. Last year it unanimously found that imports were damaging the domestic industry but, because its members could not agree on the relief to be provided, President Ford was able to deny any relief and Congress could not override his decision.

OPEC to Hold Oil Price Talks Next Wednesday

VIENNA, Dec 8 (Reuters).—Oil-exporting nations will hold a price-fixing conference as planned at Doha, Qatar, on Dec. 15, a spokesman for the Organization of Petroleum Exporting Countries said today.

Arrangements are going ahead to start the conference next Wednesday, despite rumors of a postponement, he said.

OPEC secretary-general M.O. Feyide and other officials will leave the organization's Vienna headquarters for Qatar at the weekend, information officer Hamid Zaheri said.

There had been doubt until today wheter the conference would start on schedule, since it would clash with a planned meeting in Paris between industrialized nations and countries producing raw materials. But sources said the Paris meeting now appeared likely to be postponed until the new year.

New U.S. Accounting Rule Causes Confusion

NEW YORK, Dec. 8 (AP-DJ). —A new U.S. accounting system that establishes uniform standards for foreign currency accounting is bringing loud protests from company executives and causing confusion among the investing public.

The new system, ordered by the Financial Accounting Standards Board (FASB), has necessitated adjustments in the way U.S. concerns convert into dollars and report results of their foreign operations.

Although the ruling became effective last Jan. 1, it has a retroactive effective cause earnings for earlier periods, when presented in financial statements, must be restated as if the ruling were in effect at that time.

As a result, the accounting adjustments have caused profit comparisons with year-earlier figures to differ widely from what they would have been without the FASB ruling.

Quarterly earnings reports have been bouncing about unpredictably ever since Statement 8, as the FASB ruling is called, took effect.

"It will be years before anybody can work with a comparative financial statement with any degree of certainty again," grumbles Herbert Knortz, executive vice-president of International Telephone & Telegraph Corp.

Charles Allen, vice-president and chief financial officer of TRW Inc., says: "Our profit-and-loss statement now depends to a large degree on the political factors that go into the various currency revaluations in foreign countries."

Many companies say their worst problems come from trying to analysts and investors that a big currency conversion loss does not mean they are on the brink of bankruptcy, and a big gain does not mean they are wiping out the competition.

Firms' Strategy

As a result of the confusion, companies are beginning to try to smooth out the wild earnings swings that they say arise from Statement 8. The main strategy is to balance the amounts of fixed assets, such as plant and equipment, with liabilities, such as foreign bank borrowings. When these are in balance within a country, no translation gain or loss shows up on the bottom line.

Multinationals have always tried to keep this balance, but Statement 8 has changed the rules. It standardizes treatment of various balance-sheet items.

For example, it requires that long-term debt be valued at the currency rates in effect at the end of each reporting period, rather than at the rates in effect when the debt was incurred.

It also requires that inventories be valued at the rates in effect when the goods were placed in inventory, rather than when they are sold. However, if a currency is devalued, inventories in that country must be written down to reflect the new rate.

These changes have left the assets and liabilities of many companies unbalanced, or exposed to conversion gains or losses whenever the value of foreign currencies changes in relation to the dollar.

Past Practice

Many companies used to offset the impact of currency fluctuations on any exposed assets or liabilities by reporting gains or losses only at year-end, and by using reserves to level out such gains or losses over several years. Under Statement 8, currencies must be converted and reported quarterly, and use of reserves is not allowed, so the impact of often-wild quarter-to-quarter currency fluctuations, such as was caused by the recent devaluation of the Mexican peso, are brought directly down to the bottom line.

Statement 8's change in inventory accounting particularly affects retailers. For example, F. W. Woolworth, which has a 53-per-cent interest in its British subsidiary and interests in Mexico, West Germany and elsewhere, feels the violent currency swings in these countries act directly on its profit. For the second quarter, it reported a currency loss of $627,000, compared with a gain of $10.2 million a year earlier, mainly because the deutsche mark strengthened against the dollar.

The Statement 8 restatement of 1975's results added 13 cents a share to year-earlier second period profit, making the comparison look much worse year-to year. But in the third quarter of this year, currency losses were $603,000, and restatement lopped 37 cents a share off previously reported 1975 third-quarter net, making the comparison look much better.

Multinationals with sufficient flexibility to speed up payments by foreign units to the parent are doing so. To lessen conversion exposures, for example, ITT says it is urging all of its foreign units to make "unusual payments" to the parent, including extra dividends, repayment of loans and the like.

Offsetting Changes

Companies can try to offset currency conversion gains or losses by buying currency futures contracts. In most cases these are used as insurance, guaranteeing sufficient amounts of a currency to meet obligations at a known price. Many companies say they are shying away from hedging contracts, because the cost, usually a commission of 3 to 5 per cent, is too high.

Saudis Ban Foreigners From Owning Firms

AMMAN, Dec. 8 (Reuters).—Saudi Arabia has banned foreigners from owning commercial firms and other businesses in its territory, Riyadh radio reported today.

Quoting the Interior Ministry, the report said the ruling will take effect Dec. 22. The report did not say whether the new rules applied to foreign commercial banks and contracting companies.

U.K. Mart Ends Options Project

LONDON, Dec. 8 (AP-DJ). —The London Stock Exchange announcmed today that it has decided to cease work "for the time being" on the possible establishment of trading in stock options.

A special committee on options trading will continue to work on proposals to cooperate with the European options exchange which has been proposed in Amsterdam, the exchange added.

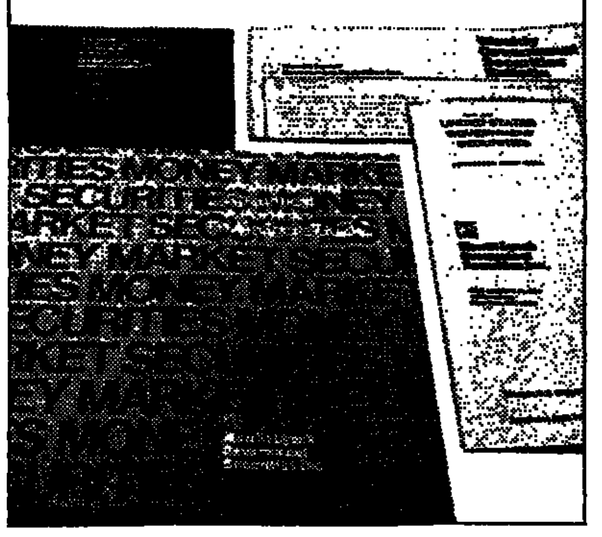
What to expect from the leading U.S. government securities firm

1. The leading firm should offer direct access to primary money markets on a worldwide basis.

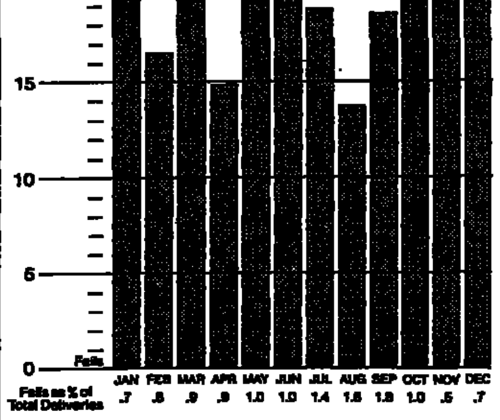


Merrill Lynch Government Securities deals with thousands of companies and institutions throughout the world. Not just those in or near major financial centers.

2. The leading firm shouldn't settle for anything less than full-time research.

Merrill Lynch Government Securities has a staff of professionals whose only job is to study the government securities market and the many factors that affect it.

The staff prepares two authoritative analyses: a *Daily Money Market Comment*, unique in the industry, and a *Weekly Government Securities Bulletin* which includes 20 tables showing 135 separate economic and financial indicators.



3. The leading firm shouldn't blink at mammoth trades or wince at small ones.

In a recent month, Merrill Lynch Government Securities handled trades as big as $400 million and as small as $1,000.

4. The leading firm should make firm bids in good markets and bad.

In a month that included a good market (April, 1976), Merrill Lynch Government Securities had an average daily volume of $1.5 billion. Even when things got tough (May, 1976), the figure was still impressive—$1.2 billion.

5. The leading firm should have a first-class clearing operation.

At Merrill Lynch Government Securities, the approach is to *avoid* problems, rather than trying to solve them after something goes wrong.

Result: In 1975 less than 1 percent of the firm's trades failed because of its own late payment or late delivery.

The leading firm should do all these things. Not just a few. This firm does.

Merrill Lynch Government Securities Inc.

Merrill Lynch Government Securities Inc., Merrill Lynch International & Co., Merrill Lynch Pierce Fenner & Smith Inc. & Merrill Lynch International Bank Ltd. are members of the Merrill Lynch & Co., Inc. group of companies.

Branches and subsidiaries and affiliates in Abu Dhabi, Amsterdam, Athens, Bahrain, Barcelona, Brussels, Buenos Aires, Cannes, Caracas, Dubai, Düsseldorf, Frankfurt, Geneva, Hamburg, Hong Kong, Kuwait, London, Lugano, Madrid, Manila, Milan, Panama City, Paris, Rome, São Paulo, Seoul, Singapore, Sydney, Taipei, Tokyo, Vienna, Zurich.

Joint venture in Tehran—Iran Financial Services Co.

THE DAI'EI, INC.

(CDRs)

The undersigned announces that the Annual Report 1976 ending February 29th, 1976, of The Dai'ei, Inc. will be available in Amsterdam at Algemene Bank Nederland N.V. and further at: Amsterdam-Rotterdam Bank N.V., Bank Mees & Hope N.V., Pierson, Heldring & Pierson N.V., Kas-Associatie N.V.

AMSTERDAM DEPOSITARY COMPANY N.V.

Amsterdam, 29th November 1976

BROWNINVEST

Société Anonyme

Siège social: Luxembourg, 2, boulevard Royal

R.C. Luxembourg B-8271

The shareholders are hereby convened to attend to the postponed

EXTRAORDINARY GENERAL MEETING

which is going to be held on January 11, 1977, at 2.15 p.m. at the registered office, with the following agenda:

1) Amendment of article 15 of the Articles of Incorporation so as to fix the annual general meeting to the third Thursday of the month of September at three o'clock p.m., in each year.

2) Amendment of article 27 of the Articles of Incorporation by adding thereto the following: "Such extraordinary reserve may also serve for annual distribution to shareholders upon special vote by the annual general meeting of shareholders."

3) Amendment of article 33 and 36 of the Articles of Incorporation so as to suppress the income equalization account and delete any reference thereto.

The shareholders are advised that the proceding meeting, which was held on November 15, 1976, could not take action as less than 50% of the shares outstanding were present or represented at this meeting.

For the postponed meeting no quorum conditions are required. Resolutions shall be taken by a two thirds majority.

Shareholders may vote at the meeting in person or by proxy. Holders of bearer shares wishing to vote in person or by authenticated proxy must deposit their shares with one of the banks below not later than 12 noon (Luxembourg time) on December 31, 1976.

(That bank will, upon such deposit, issue a ticket of admission and authenticate the form of proxy, if any. Shareholders and proxyholders will be admitted to the meeting upon presentation of such admission ticket and, in the case of proxyholders, such proxy). Share certificates so deposited will be retained until the conclusion of the meeting.

Bearer shares may be so deposited with (and proxies will be authenticated by) any one of the following banks:

Banque Internationale à Luxembourg, Luxembourg;
Brown Brothers Harriman & Co., New York;
Brown Harriman & International Banks Limited, London.

Forms of proxy will be available at such banks.

The Board of Directors.

Sales figures are unofficial.

Unless otherwise noted, rates of dividends in the foregoing table are annual disbursements based on the last quarterly or semi-annual declaration. Special or extra dividends or payments not designated as regular are identified in the following footnotes.

a—Also extra or extras. b—Annual rate plus stock dividend. c—Liquidating dividend. e—Declared or paid in preceding 12 months. f—Declared or pid after stock dividend or split up. i—Paid this year, dividend omitted, deferred or no action taken at last dividend meeting. k—Declared or paid this year, an accumulative issue with dividends in arrears. n—New issue. r—Declared or paid in preceding 12 months plus stock dividend. t—Paid in stock in preceding 12 months, estimated cash value on ex-dividend or ex-distribution date.

x—Ex-dividend or ex-rights. y—Ex-dividend and sales in full. z—Sales in full.

cld—Called. wd—When distributed. wi—When issued. ww—With warrants. xw—Without warrants. xdis—Ex-distribution.

vi—In bankruptcy or receivership or being reorganized under the Bankruptcy Act, or securities assumed by such companies.

Year's high and low range does not include changes in latest day's trading.

Where a split or stock dividend amounting to 25 per cent or more has been paid the year's high-low range and dividend are shown for the new stock only.

Transamerica Dividend Increase Continues 15-Year Record.

On September 16th Transamerica's Directors increased the annual dividend rate on Transamerica common stock to 66¢ per share.

This action marks the 15th consecutive year of dividend increases to Transamerica common shareholders who have maintained their investment.

Since 1961 the cash payout to such shareholders has increased more than 140%. The Corporation is committed to a long-term policy of attempting to provide regular dividend increases.

Transamerica has paid a cash dividend on its common stock continuously since 1934.

Transamerica

20. BANK OF NEW YORK

Can you name the 12TH largest bank in the U.S.?

We're a worldwide banking system with $9.2 billion in deposits, which includes $2 billion in personal savings.

We have $541 million in capital, $80 million in reserves, and $10.5 billion in assets.

We have 316 branches throughout New York State and 29 offices throughout the world. Have you guessed our name yet?

We have our international operations based in New York City's financial district, with key people in the world's major money centers. We have extensive experience in foreign exchange and in foreign currency management. Do you need another clue?

We do business with half of the leading U.S. national and multinational companies on the "Fortune 500" list. And over 750 banks in more than 130 countries.

Now do you know who we are?

We're the Marine Midland Bank.

Ranking based on deposits as of June 30, 1976
